CAUTION- MANY SEAPLANE LANDING AREAS IN THE NORTH ARE CLOSED DURING WINTER MONTHS BECAUSE OF ICE.

OPERATION OF SEAPLANES ON THE NEW YORK STATE CANAL SYSTEM:

AN OFFICIAL COMPLAINT HAS BEEN RECEIVED FROM THE STATE OF NEW YORK, DEPARTMENT OF PUBLIC WORKS, THAT THE NEW YORK STATE CANAL CHANNEL IS BEING USED FOR THE TAKING OFF AND LANDING OF AIRCRAFT. THIS CHANNEL IS VERY NARROW AND HAS NUMEROUS CURVES. AIRCRAFT LANDINGS AND TAKE-OFFS ON THIS CHANNEL, THEREFORE, ARE DANGEROUS AND PRESENT A HAZARD TO CANAL TRAFFIC AND SMALL BOATS. ALL AIRMEN ARE CAUTIONED THAT SUCH ACTIVITIES MAY CONSTITUTE CARELESS OR RECKLESS OPERATION OF AIRCRAFT.

NOTICES TO AIRMEN

INTRODUCTION

✓ **PROCEDURAL STATEMENT:** The "Airman's Guide" no longer has a separate section for the DIRECTORY OF AIRPORT or the AIR NAVIGATION RADIO AIDS. These two sections are now inserted as data pages between the flight planning charts. To retain the two-page chart flow, however, the data pages are found on the reverse sides of the charts rather than facing them. On the data pages are tabulated all the data covering the facilities charts on the reverse sides and formerly found in the DIRECTORY OF AIRPORTS and AIR NAVIGATION RADIO AIDS sections.

To facilitate reference to a particular facility, an Index of Facility Locations with the parenthetical number of the page on which the locale is charted has been added to the revised AIRMAN'S GUIDE, e.g., Chicago (139). On the back of page 139 will be found the Air Navigation Radio Aids and the Directory of Airports data covering Chicago.

Because of the serious paper shortage every means of reducing the Airman's Guide bulk has been investigated. Codification and considerable abbreviation are already being utilized. No material may be deleted, however, in this paper conservation program because surveys have revealed that subscribers consider all parts of the Guide essential. Consequently, about the ultimate step in this bulk-reduction direction has just been taken. The data pages backing the charts now serve, where possible, as notam pages. Resultantly, most of the new data formerly notamized in the Notices to Airmen section with prefixed large stars or double asterisks are no longer carried in that section. Only commissionings, abandonments, or changes so potentially hazardous that they are indicated with Ⓡ (for red flag) symbols on the charts, are now cited in the Notices to Airmen section

Notamizing on the charts is effected by use of the super-imposed Ⓡ and Ⓞ symbols. The Ⓡ (for red flag) indicates a very hazardous condition or a major change. The Ⓞ symbol (for orange flag) indicates a minor change or hazardous condition with the facility still usable with caution. The pertinent details to which these symbols refer will be found listed in the Notices to Airmen section under the facility name (and state) by which they are charted.

Notamizing on the data pages is effected by the use of prefixed arrows as in the former Air Navigation Radio Aids publication. All changes from the previous issue, whether cited in the Notices to Airmen section, or not, are indicated by the prefixed arrows. Following are examples of changes notamized only on the data pages: field obstruction, servicing, elevation, location, and runway length changes. Because of the use of the prefixed arrows as new data indicators, a further innovation had to be adopted. This is a tinted horizontal line following the last tabulated facility and titled either New Radio Facilities or New Airports.

Space below the tinted horizontal lines on the data pages has been reserved as a supplement for new radio aids and airports whose data were received after the data pages were originally typed. Revisions to existing airports and radio aids are super-imposed on the old data, but new airports and radio aids are listed, necessarily out of alphabetical alignment, below the tinted horizontal lines until the page is re-typed.

In summation: (a) On the data pages backing the charts, new data or revisions are indicated by arrows; (b) in the Notices to Airmen, citations covering new or revised radio data are prefixed by one large star "★". Citations covering new or revised airport, or miscellaneous data, are prefixed by two asterisks "**".

All temporary conditions (field soft, runway under construction, range course out of alignment, etc.) are cited in full until they are no longer in effect. When a citation carries a permanent item and a temporary item, the permanent item is underlined. Parenthetical date at end of item indicates time item was reported.

To conform to chart practice, all facility data are listed in the Notices to Airmen section and on data pages alphabetically by states and by facility name. Thus, an airport will be found listed alphabetically under its own name rather than under its locale's name. If the airport or radio facility name is other than that of the city in which it is located, the location is shown in parenthesis after the facility name.

SPECIAL NOTICES

CIVIL FACILITY DATA: Please advise immediately the Office of Aviation Information, Attention A-250, C.A.A., Department of Commerce, Washington 25, D.C., whenever temporary conditions covering civil airports or navigational aids begin or terminate, data revisions are effected, or flight hazards are erected or removed.

ARMY DATA: Advice covering Air Forces Fields or Air Forces Operations on civil fields, or AAF Radio Facilities, and Danger or Caution Area activation, as well as requests for approval for the closing of any Army airfields to transient military aircraft for a period in excess of 10 days should be directed to: COMMANDING GENERAL, AIR TRANSPORT COMMAND, WASHINGTON 25, D.C. ATTENTION: HEADQUARTERS FLIGHT SERVICE, FLIGHT OPERATIONS. Information to be published will be coordinated and submitted to the C.A.A.

NAVY FACILITY DATA: In accordance with Hydrographic Office Memorandum for Aviators No. 9, July 29, 1946, Hydrographic Office information concerning naval and marine corps air stations and facilities, including changes in field facilities, operation rules, air/ground communications facilities, instrument approach procedures and navigational aids, should be directed to: The Division of Air Navigation, Hydrographic Office, Washington 25, D.C., for transmittal to the C.A.A. In accordance with Aviation Circular Letter No. 96-46 of June 13, 1946, approval for the closing of any naval or marine corps air station or facility to transient military aircraft for a period in excess of 10 days must be obtained from the Chief of Naval Operations. Also, approval is to be obtained from the Chief of Naval Operations before relocation or modification of any aid to air navigation, such as reorientation of radio ranges.

✓ USE OF AIRPORTS BY MILITARY AIRCRAFT: (1) AAF Regulation 95-2. The attention of Army clearance personnel and of Army pilots is invited to the provisions of Section III, AAF Regulation 95-2 and AAF Regulation 95-2A, which state in part: "The use by Army aircraft of civil airports which have not been leased, purchased, or where AP-4 or similar landing rights agreements have not been negotiated by the Federal Government, is not authorized except in case of emergency or in case of official business. Each instance of flights in AAF aircraft for official business will be covered by competent air force, major AAF command, or higher authority orders. Each instance of flights for official business in organic aircraft of the Army Ground Forces will be covered by written orders of the commander of the unit to which the aircraft is assigned. These written orders must designate the field of intended landing. Unauthorized use of such airports is a substantiating factor in claims for damage with accompanying requests to the Government to bear maintenance and repair costs or to provide Government equipment at such civil airports. Notation will be made by clearing authorities in Remarks Section of AAF Form 23 that competent authority authorized use of such fields and will be transmitted in Remarks Section of the flight plan as "authorized flight".

All landings by military aircraft without competent written orders on inactive, temporarily inactive Army airfields and civilian airports, except in case of emergency, will be limited to the ones identified by letters 'A, N, or P' in the Airman's Guide. It is the responsibility of the various air forces, major AAF commands and certain field activities under the direct control of the Commanding General, AAF, to prevent unauthorized use of airfields and airports as outlined in this Regulation".

(2) "Official Business", within the meaning of AAF Regulation 95-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units or organizations at or near the airfield selected for landing for the purpose of conducting transactions

✓ Indicates new or revised Special Notice

in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service or other items attendant with itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

(3) Policy on Army Use of Temporarily Inactive Army Airfields. (a) Municipal airfields which have been used jointly by the Army Air Forces and civil interests and at which Army facilities are temporarily inactive but the civil facilities are still active, may continue to be used by military aircraft. No servicing other than that provided by commercial concerns will be available. Such airfields will be identified herein by the following notice: "Army temp inactive - civil facs". (b) Temporarily inactive Army airfields used exclusively by the Army Air Forces (either owned or leased) or municipal airfields used jointly by the Army Air Forces with civil interests at which both Army and civil facilities are inactive will be available to military aircraft at the discretion of the commanding officer of the organization to which the aircraft is assigned. Such airfields will be identified herein by the following notice: "Temp inactive-no facs." Above policy statement is not to be construed as countermanding any AAF regulations or letters governing command use of municipal airports or Army airfields.

(4) "CLOSED" Army Airfields. Certain airfields under the jurisdiction in whole or in part of the Army Air Forces will be listed from time to time as "CLOSED" under the provisions of AAF Regulation 60-23 or under specific direction of the CG, AAF. Such airfields will be used on official business only under written orders in each case.

CHANGES IN LISTING PROCEDURE FOR ARMY AIR FORCE AIRFIELDS: In an effort to simplify the use of the Airman's Guide within the printing limitations imposed by the Government Printing Office, notices on Army airfields that are closed or temporarily inactive or surplus to Army Air Forces will be carried in the Directory of Airports section thereby eliminating the necessity for checking in more than one section to obtain the correct status of an airport. Minor restrictions such as hours of operation, service, and hazards will continue to be listed in the Notices to Airmen Section. The following procedure is now in effect:

(a) The term "CLOSED" will be shown in Directory Section only, for all AAF airfields that are closed to all transient traffic except on official business or in emergency. The legend page of the Directory will give such a definition for "CLOSED". Airports that have been declared surplus to the AAF and on which permits have not been issued for civil use or which have not been otherwise disposed of by the W.A.A. will also be listed as "CLOSED".

(b) AAF airfields that now carry notices of "Army temp inactive-civil facs" or "Temp inactive. No facs (See Special Notice re use)" will now have such citations carried in the Directory Section only.

MILITARY AND NAVAL LANDINGS IN NEWFOUNDLAND: All military and naval aircraft landing in Newfoundland should use Harmon Field at Stephenville or Naval Operating Base at Argentia. Gander has very limited military facilities and is reserved for commercial and weather diverted military aircraft.

RESTRICTIONS ON AAF HELICOPTERS: YR-5A, R-5A, YR-5D, R-5D (except as indicated below*) and YR-5E helicopters may be released for flight only upon compliance with T.O. 01-230 HB-13 and -14.

*R-5D helicopters No. 43-46643 and subsequent have been modified by the contractor and may be released for flights.

ARMY FOREIGN CLEARING STATIONS: Under the authority of AAF Regulation 61-4 Army aircraft with destinations listed as follows or returning therefrom to the United States will clear through the stations indicated: AFRICA - Morrison Field, Fla.; Washington National Airport, D.C.; or Westover Field, Mass. ALASKA - McChord Field, Wash.; or Great Falls AAF, Mont. BERMUDA - Mitchel Field, N. Y.; Morrison Field, Fla.; Washington National Airport, D.C.; or Westover Field, Mass. CANADA - Great Falls AAF, Mont.; McChord Field, Wash.; Washington National Airport, D.C.; Selfridge Field, Mich.; or Westover Field, Mass. CANAL ZONE, CENTRAL AMERICA, MEXICO, AND SOUTH AMERICA - March Field, Calif.; Kelly Field, Tex.; or Morrison Field, Fla. CARIBBEAN - Morrison Field, Fla. ENGLAND, GREENLAND, ICELAND, NOVA SCOTIA, NEWFOUNDLAND, AND NORTH IRELAND - Washington National Airport, D.C., and Westover Field, Mass. (Note: Selfridge Field also will clear for Nova Scotia and Newfoundland). HAWAII - Fairfield-Suisun AAF, Calif.

OPERATING PROCEDURE WITH FLIGHT SERVICE UNDER AAF MILITARY FLIGHT SERVICE COMMUNICATIONS SYSTEM (PLAN 62): (1) Departure from AAF Bases. No change. Reference: AAF Regulations 15-25 and 60-22. (2) Departure from non-AAF Bases. AAF aircraft departing from non-AAF bases will file a complete flight plan with, and secure approval from the nearest Flight Service Center prior to takeoff, or as outlined in AAF Regulation 60-22. Communications with a Flight Service Center may be established by direct telephone to the center; or by a radio call to the nearest AAF Base or AACS Airways radio station. In addition to the Flight Service clearance, pilots contemplating flight under Instrument Flight Rule conditions will secure a CAA Airway Traffic Control clearance. The CAA clearance normally can be obtained more rapidly by contacting CAA directly through CAA Communications facilities. If CAA Communications facilities are not available, however, the CAA clearance may be obtained through Flight Service. (3) Change of Contact Flight Rule (CFR) Flight Plan Enroute. AAF aircraft requiring a change of route or point of first intended landing of a CFR flight plan enroute will contact Flight Service through an AACS Airway radio station or control tower, submit the information required by AAF Regulation 60-22 and, when necessary, secure Flight Service approval. (4) Change of Instrument Flight Rule (IFR) Flight Plan, or CFR to IFR, or IFR to CFR enroute. AAF aircraft requiring a change of route, altitude, point to first intended landing, cruising speed or alternate airport, or change from CFR to IFR or IFR to CFR enroute, will contact a CAA communications station for coordination and approval by CAA Airway Traffic Control and Flight Service. If communications with CAA communications station cannot be established, AACS Airways radio station will be contacted for coordination and approval by CAA Airway Traffic Control and Flight Service. (5) CFR Position Reports. When flying under CFR conditions, pilots will make position reports, wherever practicable, to AACS Airway radio stations enroute and receive any necessary advisories from Flight Service. (6) IFR Position Reports. When flying under IFR conditions, pilots will first make position reports to CAA communication stations as heretofore required, and will then make position reports to AACS Airways radio stations in order that the responsible Flight Service Center may furnish any necessary advisories. (7) Voice Calls. AACS Airways radio stations will be called by the location name followed by the word "airways", such as "Bolling Airways". This is distinct from the CAA radio call system which uses the location name followed by the word "radio", such as "Washington Radio". (8) All VHF equipped aircraft will be provided with a card to be prominently mounted near the VHF control box which will specify button, frequency, and service obtainable. An index of AACS Airways Stations within the U.S., together with a listing of the assigned frequencies, may be found on pages 94 and 95 of T.O. 08-15-1. The following table displays the channels and frequencies normally used to contact the various communication installations:

Button	Frequency	Service	
A	116.15 mc.	CAA AIRWAYS (RANGE STATIONS)	*AACS Airways (Plan 62)
B	126.18 mc.	CONTROL TOWERS	
C	137.88 mc.	AACS AIRWAYS (PLAN 62)	*Control Towers
D	140.58 mc.	MILITARY EMERGENCY AND GCA FINAL APPROACH CONTROL	

*Available for service indicated on a secondary basis.

(9) It will be some time before all AAF aircraft are equipped for operation on AACS Airways frequencies. It is not the intent that pilots flying aircraft not so equipped attempt to make position reports to Flight Service as described above. Emergency Flight Service advisories, however, may be transmitted to such aircraft on the AAF control tower frequency. Aircraft which are equipped for operation on AACS Airways frequencies will contact airways stations whenever possible rather than AAF control towers.
(10) The following list of telephone numbers will be used for contacting military Flight Service Centers:

CAA AREA	FLIGHT SERVICE AREA	PHONE NO.
Washington Pittsburgh New York Boston	Olmsted Flight Service Center Middletown, Penna.	Steelton 93387 " 93470
Jacksonville Miami	MacDill Flight Service Center Tampa, Fla.	Tampa H-4871
Memphis New Orleans Atlanta	Maxwell Flight Service Center Montgomery, Ala.	Montgomery 89
Detroit Cincinnati St. Louis Chicago	Wright Flight Service Center Dayton, Ohio	Osborn 88691,88692
Fort Worth San Antonio	Fort Worth Flight Service Center Fort Worth, Texas	Ft. Worth 77251
Denver Minneapolis Kansas City	Lowry Flight Service Center Denver, Colo.	Denver LD 116 Denver LD 117
Los Angeles Albuquerque El Paso	March Flight Service Center Riverside, Calif.	Riverside 7107,7108
Oakland Salt Lake	Hamilton Flight Service Center San Rafael, Calif.	San Rafael 770
Great Falls Seattle	McChord Flight Service Center Tacoma, Washington	Tacoma LD 20 Tacoma LD 21

IFR CLEARANCE OF ARMY AIRCRAFT: Except as outlined below, no Army aircraft will be cleared for instrument flight unless such aircraft is equipped with a low frequency radio receiver capable of reception in the 200 to 400 kc. band. The BC-1206 (Detrola) receiver is not considered adequate as regards compliance with this directive. Aircraft not so equipped may be permitted to clear under IFR when the instrument type clearance is necessitated by reduced local visibility caused by fog, smoke, or haze, or when the flight will not be conducted under conditions which will require navigation by radio.

RESTRICTION ON FLIGHT OF AAF AIRCRAFT IN NEW YORK CITY AREA: No AAF aircraft except those on scheduled transport operations will be cleared to New York City Area unless point of first intended landing is Mitchel Field, Hempstead, L.I., N.Y. When instrument conditions prevail in New York City Area, no Army aircraft except those on scheduled transport operations will land at or take off from other than Mitchel Field. When contact conditions prevail in New York City Area, aircraft which have been cleared for Mitchel Field but which desire to land at other authorized fields in New York City Area will, when approaching New York City Area, obtain clearance from Olmsted Flight Service Center, through normal communication means. For purposes of these instructions, New York City Area is defined as a circle 50 miles in diameter centered on southern tip of Manhattan Island. Contact Weather New York Area will be considered to be 2000' ceiling, 3 miles visibility, both day and night. When cloud conditions exist below 2000', flight conditions will be considered IFR.

STANDARD NAVY GROUND CONTROL APPROACH FREQUENCY ASSIGNMENTS: Allocations of frequencies, both HF and VHF, for Navy GCA use have been coordinated with AAF. Universal frequencies allocated primarily for Navy GCA operational use are as follows: HF Communications - 3475, 4890, 6640 kcs.; VHF Communications - 134.64, 142.02, 143.64 mcs. As a safety precaution, Navy GCA Units will also be prepared to control aircraft on 140.58 mcs., the Navy emergency frequency. To provide a means whereby Navy aircraft may receive assistance from Army GCA Units and vice-versa, the following agreement will govern: (a) Army GCA Units will at all times be prepared to control Navy Aircraft on 140.58 mcs. (b) Navy GCA Units will be prepared to control AAF aircraft on 140.58 mcs. It is the responsibility of the pilot desiring GCA assistance to establish communication with the appropriate control tower for preliminary approach instructions. The pilot will then be instructed as to the proper frequency for contacting the GCA Unit. Navy GCA Operati onal Units are located as follows: Whidbey Island NAS, Wash.; Charlestown NAAS, R.I.; Oakland NAS, Calif.; Miramar MCAS, Calif.; Seattle NAS, Wash.; Olathe NAS, Kans.; Norfolk NAS (East), Va.; Patuxent River NAS, Md.

FOREIGN ENTRY PROCEDURES, AIRPORTS OF ENTRY, CUSTOMS REPORTS, U.S. CIVIL AIRCRAFT CLEARANCE FOR FOREIGN COUNTRIES, CANADIAN REGULATIONS FOR CFR FLIGHTS, CANADIAN INSTRUMENT FLIGHT RULE FLIGHT, FLIGHT INTO PANAMA CANAL ZONE, CARIBBEAN AREA - RADIOBEACONS FOR USE WITH ADF: These procedures and regulations were all incorporated into the Flight Information Manual, Volume 1, No. 2, dated January 1, 1947. Only amendments to the data contained in the Manual will hereafter be carried in the Airman's Guide.

AIRPORTS OF ENTRY: Correct Flight Information Manual, Volume 1, No. 2, dated January 1, 1947, by adding Akron Arpt., Ohio; Baudette Arpt., Minn.; and Chalks Seaplane Base, Miami, Fla.; and by revising the listing to read as follows: Presque Isle AAF, Me. Pembina Int. Field, N. D.; Eagle Pass Mun. Arpt., Tex.; and Dinner Key Coast Guard Air Station, Florida.

SAN JUAN, P.R. PRE-FLIGHT CLEARANCES: The Isla Grande Airport at San Juan, P. R., is a part of the U.S. Naval Air Station, San Juan. Commercial air carriers may not operate at this field without receiving specific authorization from the Chief of Naval Operations, Washington, D.C. The Commanding Officer NAS, San Juan, may grant permission for one or two isolated landings. In any case, proper authority must be obtained prior to landing at San Juan. Privately owned aircraft in a ferry status must obtain permission from the commanding officer before landing at Isla Grande Airport.

MEHRABAL AIRPORT, TEHRAN FACILITIES: Following services available daily from 0230 to 1430Z GMT; point to point on 6690 kcs, call sign EPD; air to ground on 6590 kcs, call sign EPD; and tower radio telephone on 6640 kcs, call Mehrabal. MF beacon is also available on 310 kcs. on request, call sign TR.

✓STANLEY FIELD, BELIZE, BRITISH HONDURAS FACILITIES: Civil Airport - Located at lat. 17-32-10 N, long 88-18-20 W. Elev. 16'. One rnwy: 5000 x 150' ENE/WSW. Surround country: SW quadrant highest level 3700', 55 mi. distant, all other approaches flat. 91,100 oct. No night lighting facilities. Radio facs.: Radio beacon identification is "BZ". Transmits on 392 kcs, Type A2 emission; Twr transmits on 4575 kcs., guards 6210 kcs., Type A3 emission; ground-air-ground transmits on 6515 kcs., guards 6515 kcs., Type A3 emission; A/C Guard transmits on 6720 kcs., guards 6720 kcs. Type A1 emission. Facilities available between the hours of 1330Z and 2400Z.

✓PANAMA CANAL ZONE CLEARANCE AND ROUTE FREQUENCIES: Balboa Overseas-Foreign Aeronautical Communications Station WHZ continuously guards 3105 and 6210 kcs. for calls from itinerant aircraft. Calls will be answered on route frequencies as follows: Balboa-San Jose-Managua 3082.5/5162.5 kc voice. Balboa-Barranquilla-La Guria. Balboa-Turbo-Medillen 3057.5/5602.5 kc voice. Balboa-Kingston. Balboa-Habana 3082.5/5692.5 kc voice. Balboa-Guayaquil 3076/6597 kc CW. Army clearance required prior to entering zone 200 mile radius Balboa.

✓NORTH ATLANTIC OCEAN STATION VESSELS: Commander, North Atlantic Ocean Patrol has advised that, effective 0001 GMT, January 15, 1947, all ocean station vessels began guarding distress frequency 140.58 mcs continuously at sea in addition to distress frequencies 500 and 8280 kcs. Ocean station vessels will continue to guard 116.1 mcs., when on station for routine VHF communications.

✓GUARDING OF 3117.5 KCS. BY CAA AIRWAY COMMUNICATIONS STATIONS: All airway communications stations located at points also served by CAA airport traffic control towers discontinued continuous listening watches on 3117.5 kcs. Hereafter, communications stations at these locations will establish watches on 3117.5 kcs. upon "request" and during such hours as the associated tower is closed.

✓NEW PRIVATE FLIER FREQUENCIES: All C.A.A. Communications Stations and Towers are discontinuing receiving watches on 131.7 and 131.9 mcs. as new equipment becomes available to guard the new private flier frequencies of 122.1 mcs. for transmission to CAA communications stations and 122.5 mcs. for transmission to CAA operated towers. Practically all CAA towers now guard 122.5 mcs. but the communications stations program is not fully effective yet because of non-receipt of the new receivers.

✓C.A.A. COMMUNICATIONS STATIONS GUARDING 122.1 MCS.: CALIFORNIA - Los Angeles, Oakland; FLORIDA - Daytona Beach, Jacksonville, Key West, Melbourne, Orlando, Tallahassee, Tampa, W. Palm Beach, Miami; GEORGIA - Alma, Atlanta, Macon, Savannah; IOWA - Des Moines; MISSISSIPPI - Jackson; MONTANA - Helena; OREGON - Pendleton; SOUTH CAROLINA - Charleston; TENNESSEE - Knoxville, Memphis, Nashville; WASHINGTON - Yakima; MISSOURI - Kansas City.

✓C. A. A. ✓U.S. WEATHER BROADCASTS AND TRANSMISSIONS: The time of observation for all weather reports is 30 minutes after the hour, unless otherwise announced. Pilots enroute are requested to avoid, if possible, calling airway communications stations at or about 15 and 45 minutes past the hour to request weather information, as such calls may delay starting of scheduled broadcasts and cause inconvenience to other persons who are dependent on the broadcasts for weather reports.

✓RADIOTELEPHONE COMMUNICATIONS: The word ROGER in radiotelephone communications means "I have received all of your last transmission", and its use in any other sense by CAA stations and towers is not authorized. In order to avoid confusion it is suggested that pilots engaging in air-ground contacts also limit the use of ROGER to acknowledgment of transmissions.

✓PILOTS' ATTITUDE TOWARD FEDERAL AIRWAYS LIGHTING FACILITIES: The CAA is conducting a survey to ascertain from pilots throughout the United States whether or not airway beacons and course lights are aids to flying safety. The results of this survey will determine the future policy as regards the retention of these beacons and lights. The questionnaires (Form ACA-1691) are now being distributed. It will be appreciated if all concerned will cooperate by completing this form and forwarding it to the Civil Aeronautics Administration, Assistant Administrator for Federal Airways, Washington 25, D.C., Attention: A-54, within ten days after receipt.

PRE-FLIGHT SERVICE: Pilots desiring to file flight plans are requested to do so with any CAA Airway Communications Station by personally visiting the station or by telephone. Radio should be used for filing flight plans only as a last resort. Pilots are urged to visit communications station to obtain authentic flight information and assistance in planning their flights. Personnel at these stations are trained to render flight planning assistance. An objective of CAA pre-flight service is to encourage pilots to familiarize themselves with flight conditions prior to commencing cross country flight.

INSTRUMENT FLIGHT, NEW YORK METROPOLITAN AREA: Effective Feb. 18, 1947, revised arrival, departure, holding, instrument approach and control procedures utilizing new radio aids will be placed in effect in New York Metropolitan Area. Non air carrier pilots proposing instrument flight through this area or to or from Newark, Mitchel, or La Guardia Fields should write the Chief Controller, New York Air Traffic Control Center, Box 575, La Guardia Field, New York, for copies of applicable Operations Letters describing these procedures.

NEW YORK OCEANIC AIR TRAFFIC CONTROL PROCEDURES: For the information of those agencies intending trans-oceanic operations in the New York Oceanic Control Area and which are not in possession of PICAO manuals for procedures the following is promulgated: The New York Oceanic Airway Traffic Control Area has been activated in accordance with PICAO directives and New York Oceanic Traffic Control Operations Letter No. 1.

This area is bounded on the N by the 43rd parallel, on the E by the 45th meridian, on the S by the 30th parallel, on the W by a line paralleling the E Coast of the U.S. 100 nautical miles off-shore.

All aircraft operating therein must do so under an approved instrument flight plan, the composition of which follows: aircraft registration, aircraft radio call, type of aircraft, person in command, point of departure, cruising altitude, route of flight, point of first intended landing, proposed true airspeed, transmitting and receiving frequencies, proposed or actual departure time, estimated elapsed time to arrival point, alternate airdrome, amount of fuel in pounds, any other pertinent data deemed necessary for control purposes. Flight plans shall be addressed to New York Ocean Control (preferably through WSY, New York) prior to entering this area.

Position reports transmitted by radio telegraphy will be composed in the following abbreviated form: the position will be determined as soon as practicable after the first hour of flight and each hour thereafter, and the reports transmitted to the ground station at the the earliest opportunity. Standard position reports shall be in the following form: U G G G G Q L L L L Long Long Long Long PD Fox Charlie Tare 1 Tare 2 Tare 3 and Sugar 1 Sugar 2 Sugar 3 How 1 How 2 How 3 Fox 1 Fox 2 Fox 3 Fox 4 Fox 5.

Position report code Uncle, indication by one figure of the system of units utilized according to the following: 0 for metric system, 5 for English system. George indication of time given in hour figures based on GMT. Queen indication by 1 figure of octant in which aircraft is situated according to the following: N lat. 0 equals 0° to 90°; W 1 equals 90° W to 180°; 2 equals 180° to 90° E; 3 equals 90° E to 0°; S lat 5 equals 0° to 90° W; 6 equals 90° W to 180°; 7 equals 180° to 90° E; 8 equals 90° to 0°. Love indication of lat. in 4 figures (degrees and minutes); long. indication of longitude in 4 figures (degrees and minutes) dropping hundredths degrees. Peter Dog indication by 1 figure of means used to determine the position according to the following: 1 equals dead reckoning; 2 equals single position line; 3 equals single radio bearing position line; 4 equals radio fix; 5 equals celestial fix; 6 equals visual or ground fix; 7 equals Loran or console fix; 8 equals radar fix George Easy, Easy; 9 equals celestial and radio fix. Fox Charlie indication by 1 figure, flight conditions according to the following: 0 equals visual flight rules at all levels; 1 equals visual flight low clouds; 2 equals on top; 3 equals between layers; 4 equals medium icing; 5 equals heavy icing; 6 equals in and out of clouds 25% IFR; 7 equals ditto 50% IFR; 8 equals in and out of clouds 75% IFR; 9 equals continuous IFR; Tare one, Tare two, Tare three indication of true track in degrees given in three figures. Tare one equals hundredths; Tare 2 equals tenths; Tare 3 equals single unit. Sugar 1, Sugar 2, Sugar 3 indication of ground speed in 3 figures, Sugar 1 in hundredths; Sugar 2 equals tenths; Sugar 3 equals single unit. How 1, How 2, How 3 indication of altitude in 3 figures. How 1 equals ten thousands of feet or thousands of meters; How 2 equals thousands of feet or hundreds of meters; How 3 equals hundreds of feet or tenths of meters. Fox 1, Fox 2, Fox 3, Fox 4, Fox 5 weight of fuel used given in 5 figures. Fox 1 equals ten thousands; Fox 2 thousands; Fox 3 hundredths; Fox 4 equals tenths, Fox 5 equals single units. Units to be used ground speed; metric system kilometers per hour, English system knots; altitude: metric system tenths of meters; English system hundreds of feet; weight of fuel: English system pounds.

Example message: "0 1 4 1 5 0 3 0 4 5 5 3 3 0 7 2 2 9 0 3 2 5 1 2 5 0 2 4 5 0" meaning "at 1 4 1 5 GMT, position lat. 30°45' N, long. 53° 30' W Loran or Console determined position - on top - true track 290° - groundspeed 325 M.P.H. - altitude 12,500' - weight of fuel used 2450 lbs".

Position reports should be addressed to New York Ocean Control. Position reports transmitted by radio telegraphy should be directed to WSY if possible. If military aircraft are not equipped to transmit on PICAO frequencies to give their position, reports will be directed to a military air/ground station suitably equipped to relay messages to New York Ocean Control. Publications outlining PICAO procedures for air navigation services are available in Publications and Document Section, Dominion Square Building, Montreal, Canada. New York Oceanic Traffic Control Operations Letter No. 1, available New York Airway Traffic Control Center, La Guardia Field.

All flights operating in the New York Oceanic Control Area will be cleared at the following altitudes: Magnetic headings of from 0° to and including 179°, odd thousand foot levels. Magnetic headings of from 180° to and including 359°, even thousand foot levels.

BERMUDA APPROACH CONTROL AREA PROCEDURES: See page 172

NEW YORK OVERSEAS FOREIGN AERONAUTICAL STATION: Effective Dec. 4. 1946, the broadcast of navigation reports by WSY changed times of transmission and added the frequencies as follows: At 0200, 0400, 0600, 0800, 1000 and 1200 GMT broadcast is made simultaneously on 3380, 8720, and 12395 kcs. At 1400, 1600, 1800, 2000, 2200, and 2400 GMT, broadcast will be made simultaneously on 3380, 5960, 8720, 12395 and 16250 kcs. Form and contents of broadcast remain unchanged. Concurrently, the hourly metar and notam broadcast are transmitted at 55 minutes past each hour between the hours of 0055 through 1155 GMT on 3380, 8720, and 12395 kcs., and between the hours of 1255 and 2355 GMT on 3380, 5960, 8720, 12395, 16250 kcs. Contents of the metar and notam broadcast remain unchanged. The broadcast at 25 minutes past each hour was discontinued. Comments concerning the effectiveness of the above services will be appreciated.

AIRPORT APPROACH ZONES AND AIRPORT TRAFFIC ZONES CFR MINIMA: Part 60 specifies that CFR traffic within Airport Traffic Zones or Airport Approach Zones must maintain 500' vertical and 2000' horizontal separation from the clouds unless given traffic clearance by the control tower or control center concerned. Even under such clearance CFR flights must remain clear of clouds. These airport traffic zones and airport approach zones are indicated on the Flight Planning Charts of the Airman's Guide, and all recently revised Coast and Geodetic Survey Aeronautical Charts. In the interest of safety CFR flights must maintain the 500' and 2000' minima specified above while in these circular charted zones. (See Chapter VIII of the Flight Information Manual for air traffic control procedures and weather minima).

REDESIGNATION OF CIVIL AIRWAY: Effective Jan. 15, 1947, Part 600.1 of the Regulations of the Administrator was amended to read as follows: Section 600.10248 Red Civil Airway No. 49 (Elko, Nev., to Fort Bridger, Wyo.). From Elko, Nev. range station via Wendover, Utah range station; the intersection of the E leg of Wendover, Utah and the W leg of Salt Lake City, Utah; Salt Lake City, Utah range station; to Fort Bridger, Wyo. range station. (This corrects "Airgi", Vol. 1, No. 22)

NOTICE TO ALL FLYING PERSONNEL: Because of the increase in aircraft operations, both civil and military, in recent months, the number of complaints regarding airplane noise nuisance has reached such proportions that the advancement of aviation and development of new airports are in danger of being severely retarded.

To reduce the number of such complaints, it is requested that the following practices be put into effect by all fliers: (1) Discontinue all unnecessary low flying. (2) When weather and traffic volume permit, increase altitudes of all traffic patterns that require flight over inhabited areas. (3) Re-route channels of approach and departure to avoid residential and business districts whenever possible. (4) If the airport is located near inhabited areas, reduce power and increase pitch of propellers as quickly as possible during take-off so as to keep engine and propeller noises at a minimum. (5) Keep rpm's set at a minimum required operational setting when low flying over populated areas is necessary.

CIVIL USAGE OF MILITARY FIELDS: Army and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

PERSONAL POSSESSION OF PILOT CERTIFICATE: Effective Feb. 15, 1947, Part 43.400 of the Civil Air Regulations will be amended to read as follows: 43.400 Pilot Certificates: No person shall pilot a civil aircraft within the U.S. unless he holds a valid pilot certificate with appropriate ratings issued by the Administrator or an appropriate and valid foreign pilot certificate. Such certificate shall be in the personal possession of the pilot at all times while piloting aircraft and shall be presented for examination to any inspector of the Administration or State or local law enforcement officer upon the request of such inspector or enforcement officer.

✓ OLD PILOT CERTIFICATES MUST BE EXCHANGED: All pilot certificates issued prior to July 1, 1945, will expire on July 1, 1947. Such certificates may be exchanged for the new-type certificates at any time prior to their expiration date. No red tape or written application is involved in the exchange. The pilot merely presents his old-type certificate to a CAA inspector, who immediately issues a new-type certificate. A pilot can arrange to make the exchange at a CAA regional or district office, or during a CAA inspection trip to his local airport. The new-type certificates wi ll be valid for at least 24 months from the date of issue, and the Civil Aeronautics Board is considering extending them for an even longer period.

LOW FLIGHT OVER FUR RANCHES: Numerous complaints have been received regarding low flying over fur ranches. This low flying, especially during mating season, has resulted in very definite dollar and cents losses to fur breeders. They request that pilots avoid flying over their ranches, particularly at low altitudes, stating that the ranches can be identified by the large number of small animal inclosures or pens.

INSTRUMENT APPROACH PROCEDURE MINIMA: Part 61.752 of the C.A.R. was amended Jan. 10, 1947, and now reads as follows: "61.572 No instrument approach procedure shall be executed or landing made at an airport when the latest U.S. Weather Bureau weather report at the airport indicates the ceiling or visibility to be less than that prescribed by the Administrator for landing at such airport".

✓ VHF CHANNEL LETTER DESIGNATORS: CHANNEL LETTER DESIGNATORS ARE BEING SHOWN ON THE FLIGHT PLANNING CHARTS HEREIN ONLY AS AN AID TO PILOTS IN THEIR USE OF UNMODIFIED MILITARY EQUIPMENT. IT IS EMPHASIZED THAT NOT ALL VERY-HIGH FREQUENCIES NOW IN USE HAVE CHANNEL LETTER DESIGNATORS. Standardization of air-borne equipment in this respect has not been effected, nor is it expected to be along the lines of one-letter designators because of the large number of frequencies which eventually will be in use.

✓ AERONAUTICAL CHART AND PUBLICATION CORRECTIONS: (a) Correct "TO-08-15-3", Page 104, by showing the let-down procedure for Portland, Oregon, as follows: Portland FM is located on S leg of Portland radio range rather than on the N side of range station; Northern FM is Woodland rather than Willamette.

(b) Correct "TO-08-15-1", Page 29, by showing the minimum altitudes for Red Airway 19, Goshen to Grand Rapids as follows: 3000' northbound - 4000' southbound; Page 25, by showing the minimum altitudes for Blue Airway 20, Allentown to Philadelphia as follows: 3000' northbound - 4000' southbound; Page 53, by showing the minimum altitudes for Blue Airway 28, Columbia to Charleston as follows; 2000' southbound - 3000' northbound; Chart 23, by showing Gardner intersection as the intersection of the NE course of the Westover range and the NW course of the Boston Range; Chart 23, by showing Greenfield intersection as the intersection of the NE course of the Westfield Range and the SE course of the Albany Range; Page 43, by changing the hours of operation of Independence AAF, Kans. Tower from 0800-2000 to 0700-1900.

WEATHER REPORTING SERVICE

Weather Reporting Station	Type of Station		Lat., Long.	Elev.	Effec Date

TELETYPE NOTAMS: Throughout the year climatic conditions (snow storms, floods, etc.) render many fields temporarily unusable or unsafe. In addition, there are intermittent maintenance operations in progress on many fields. Radio facilities suffer temporary power failures or course misalignments, and lighting facilities are temporar-

ly inoperative. Because these temporary conditions cannot be given immediate coverage in the "Airman's Guide, full cognizance must be taken of Teletype Notam service which gives the desired coverage on any facility or field at which teletype transmitting stations are based. Cross-country pilots, accordingly, should consult these Teletype Notams for latest available data on air navigation aids. These teletype notams are posted in CAA Communications Stations and in all Army Air Field and Naval Air Station Operations Offices having teletype drops.

✓ ARMY AIR FORCE H.F. D/F NETWORK: H.F. D/F Net listed on page 91 of Army Air Forces Radio Facilities Charts dated Jan. 7, 1947, is unreliable, and bearing and fixes given should be used with caution.

N.B.

AIRPORT TRAFFIC CONTROL PROCEDURES: (a) Planes with 2-way radio should establish communication with control tower when 15 miles from the airport of destination and before taxiing or taking off.

(b) Planes without receivers, when approaching tower-controlled fields and before taxiing and taking off, should be on the alert for and be guided by light gun signals. (See AAF Regulation 100-4, dated March 4, 1944, and CAR Digest or Manual 60).

(c) Flashing tetrahedron lights, as well as the daylight operation of rotating beacons coupled with flashing red code lights, indicate suspension of CFR traffic.

AIR NAVIGATION AID DATA

All radio facilities except towers are C.A.A. facilities unless otherwise cited. All towers are listed by operating agency. All range bearings are magnetic inbearings. All fan markers and station location markers operate on 75 mcs. All radio facilities operate continuously unless otherwise specified.

LEGEND

** - New or revised airport, danger area, or miscellaneous data to be inscribed on charts or added to records.

★ - New or revised radio data to be inscribed on charts or added to records.

ALABAMA

BARIN NAAS EAST & WEST FLDS (FOLEY)-Closed to trans acft. (1-9)
BIRMINGHAM ARPT-Closed to civil. acft not equipped with operating rcvr. No landings on sodded areas. Ctn ngts or under IFR, plant S of fld has long taxi and parking strips resembling rnwys. No svcg mil acft 2200 to 0600. No maintenance. (1-18)
BROOKLEY FLD (MOBILE)-RADIO: Army DF stn inop. (12-9) FLD: Soft-use rnwys, taxi strips only. No 91 oct. (10-4)
CAMP SIBERT AAF (ATTALLA)-CLOSED TO ALL ACFT.
CENTRE ARPT-In wet weather, avail. lgt acft only. (12-16)
CHASTAIN'S ARPT (PRICHARD)-2600' of E/W strip avail., mrkd. (11-2)
COLUMBIANA ARPT-N end strip rough, rocky. (12-16)
CRAIG FLD (SELMA)-RADIO: Army DF stn inop. (12-20) FLD: Bndry lgts inop.(11-12)
DANNELLY FLD (MONTGOMERY)-NE taxi strip closed (parked acft) (8-12)
GUNTER FLD (MONTGOMERY)-Use rnwys only. Sod areas adj rnwys and taxi strips soft. Use Maxwell Fld for trans svcg. (1-10)
HARTSELLE ARPT-Graded area rough. Fld soft when wet. Use W side of strip. (2-3)
[redacted]
HUNTSVILLE-Bombing and mortar firing is being conducted within the following described area: beginning at the Tenn. River Channel at lat 34-34-30, long. 86-44; due N to Southern RR; easterly along RR to long. 86-42; due S to mid river; SW along river to point of beginning.
JOSEPH CITY-RADIO: FM on E course of Winslow range temp inop. (1-21)
MAXWELL FLD (MONTGOMERY)-At ngt or under IFR conditions large depot 1 mi S looks like arpt and lgts give impression of parallel rnwys. (10-17)

FENTRESS NAAS-Use in emerg only (caretaker status - no facs).
GORDONSVILLE INT, SITE 51, NA-WA-Soft in wet weather. All types acft use ctn during winter months. (1-17)
HARCUM ARPT-Use NE/SW strip only between yellow cone mrkrs. (1-10)
HYBLA VALLEY ARPT (ALEXANDRIA)-Surplus Acft Sales Center - parked acft.
LANGLEY FLD-RADIO: N course of Army range swinging 5° W, bear. 167°. (1-15)
FLD: Rnwy 2-20 closed. Rnwy 12-30 closed to all 4-engine acft. (1-14)
LOVING FLD-SITE 35A, NA WA (PULASKI)-Observe right traffic for landings from SW on NE/SW rnwy. (12-31)
MONOGRAM NAAS (DRIVERS)-Use in emerg only (caretaker status - no facs).
MT. VERNON-See Special Notice under District of Columbia.
NORFOLK-RADIO: VHF range comm FOR TEST PURPOSES ONLY. Lctd at lat 36-48-13, long. 76-12-06. Ident. "NW". Freq. 108.7 mcs. Visual courses: 20° 15', 200° 15'. Aural courses: 110° 15', 290° 15'. Class: VARW. Aligned by ground check only. (1-20)
NORFOLK NAS-EAST FLD-Shoulders adj perimeter taxiway soft. Pilots on Southbound coastal flights proceeding in accordance with IFR to NAS Norfolk, shall establish radio ctc with twr at NAAS Chincoteague, Va., for further clearance instructions from Navy Norfolk. Pilots on Northbound coastal flights proceeding in accordance with IFR to NAS Norfolk shall establish radio ctc with Navy Weeksville Radio, NAS (LTA) Weeksville, Elizabeth City, N.C., for further clearance and instructions from Navy Norfolk. Equip. on fld. (7-22)
OCEANA NAAS-Rnways, taxi strips under const. Facs avail. 0800 to 1630 Mon thru Fri. Acft clearances not accepted 1630 to 0800 Mon thru Fri. Essential mil flights accepted anytime on prior notification. (9-26)
ORANGE CO. ARPT-Strips muddy in wet weather. (12-29)
PENINSULA ARPT (HAMPTON)-Right traffic pattern. (1-24)
PETERSBURG ARPT-Avail. emerg landings only. (1-20)
PRESTON GLENN ARPT (LYNCHBURG)-Use rnwys only during and after wet weather. Two poles 4200' E of E/W rnwy, 2 poles approx 3200' NW of W end E/W rnwy, and 3 poles approx 3600 to 3900' W of W end E/W rnwy unlgtd. (2-1)
QUANTICO MCAS-Closed sunset to sunrise except in emerg. (11-14)
RICHMOND-Elko Aux. Fld, 5 mi E of Richmond AAB, is similar in design and layout to the Richmond AAB, BUT RNWYS ARE UNSUITABLE FOR LANDING BY ACFT OF ANY TYPE. Care should be taken not to confuse this fld with the Richmond AAB.
RICHMOND AAB-Ltd Army svcg facs. Avoid using 1000' rnwy extensions. Rnwy, taxiway shoulders soft. Acft landing this fld without estab. rdo commun. with twr watch carefully for lgt gun signals-twr lctd in center of triangle of rnwys. (8-7)
SHENANDOAH ARPT-N/S strip under const. (10-29)
UNIVERSITY OF VIRGINIA ARPT (CHARLOTTESVILLE)-Ctn on E/W strip in wet weather. (10-18)
VALLEY ARPT (WAYNESBORO)-Ctn when wet. (12-17)
WINCHESTER ARPT-E end E/W strip rough. Contact Front Royal Radio or circle fld before landing. (6-7)

SPECIAL NOTICE-Benton Co. Danger Area approx 12 mi NW of Pasco is particularly hazardous - all flights avoid. (See Spokane Flight Planning Chart #3, Spokane Sectional, and Washington 5 Danger Area Charts).
ARLINGTON NAAS-Use in emerg only (caretaker status - no facs).
**BELLINGHAM ARPT-Redesignated as Arpt of Entry for period of one yr from Jan 1, 1947. See Page 1. Do not taxi off surfaced areas-sodded portions soft. Day traffic controlled by white T center of arpt. (2-3)
COLVILLE ARPT-NW/SE strip closed. (11-6)
COUPEVILLE OLF-Closed except in emerg. Training use required 24 hrs adv notice thru Whidbey Island NAS. (9-11)
DOROTHY SCOTT ARPT (OROVILLE)-2' weeds S 1000' N/S strip. (7-1)
EASTON INT, SITE 5B, SA-HL-CLOSED (snow). (11-22)
**EPHRATA-RADIO: VHF voice fac comm at commun stn Jan 20. Transmits on and guards 116.1 mcs cont. Class: EMRLZ-DTV.
EPHRATA ARPT-Loose cattle on fld. (10-7)
FAIRWEATHER FLD (REPUBLIC)-Avail. lgt ski-equipped acft only. (12-31)
FELTS FLD (SPOKANE)-Rancher Bcn near Felts Fld inop. Take-off and land on sod area before reaching taxiway near center of fld. N side rnwy mrkd. (12-13)
HAFER'S RANCH ARPT (CHEWELAH)-Closed pending decision re abandonment. (7-1)
KENMORE ARPT (BOTHELL)-Avail. emerg use only - cattle. (9-10)
KING CO. ARPT-BOEING FLD (SEATTLE)-Use rnwys, taxi strips only. Equip. adj Rnwy 13-31. Lgt acft graded strip between main rnwy and E taxiway closed-avoid mrkrs this area. (12-27)
LAKE SAMMAMISH SEAPLANE ANCHORAGE (ISSAQUAH)-CLOSED. (4-26)
MARTIN FLD (COLLEGE PLACE)-Const, equip. on strips. Strip 2500 x 150' cleared and flagged center of fld for landing. (1-2)
McCHORD FLD (TACOMA)-RADIO: Army ILS (CAA type) temp inop. (1-7) FLD: Use rnwys, taxiways only. Equip. on fld. (12-11)
MT. VERNON OLF-Closed except in emerg. Training use rqrs 24 hrs adv notice thru Whidbey Island NAS. Bcn inop. (10-1)
OLYMPIA ARPT-Rot. bcn flash. green and yellow used to warn lcl and trans acft of approach of scheduled transport acft. Bcn turned on five minutes before arvl and turned off upon arvl and landing of acft. (12-7)
PAINE FLD (EVERETT)-Ngt lighting immediately avail. to rdo equipped acft by contacting Everett Rdo. Closed to all other acft between sunset and sunrise except by arrangement with arpt mgr or CAA Commun Stn. 145' unlgtd derrick 3 mi SSE. (1-10)
PASCO-See Special Notice (first item under state heading).
PASCO NAS-Use in emerg only (caretaker status - no facs).

[redacted]

PULLMAN-MOSCOW REGIONAL ARPT (PULLMAN)-Avail. lgt acft only. (11-26)
RICHLAND AIR BASE-NW/SE strip under const. (8-19)
ROSALIA MUN ARPT-12" grass and weeds. (7-16)
SAVAGE FLD (CHENEY)-Moderate soil erosion intmtly. (9-14)
SEATTLE-All acft advised not to fly below or near blimps in Puget Sound area
SEATTLE NAS-Single-engine acft approach stn from Kirkland at 1000' alts. Seaplane landing approach over Lake Washington from N or S under 200'. Rnwy 14-32 lgtd 30 minutes prior to arvls and take-offs and on req from sunset to sunrise. Tetrahedron lgtd sunset to sunrise. Three lgtd 30' poles 150' E of Rnwy 14-32, near GCA unit. (1-29)
SEATTLE-TACOMA ARPT (SEATTLE)-RADIO: ILS emits lclzr signals on 110.3 mcs, bndry and outer mrkr signals on 75 mcs cont. These signals may at times be spurious and are not to be relied upon for any purpose. (10-8) FLD: Equip. on fld days. Const approx 20' N of N end NW/SE rnwy. (8-22)
SPRAGUE ARPT-Use N side and 1050' W end of strip, bal rocky and soft. Cattle on fld. (9-14)
SULLIVAN LAKE ARPT (METALINE FALLS)-2' grass and weeds. (7-1)
TOLEDO INT, SITE 63B, SF-SA-Use strips only - sodded portions soft. (11-18)
★WALLA WALLA AAF-RADIO: Army VHF DF stn now operates cont. (1-28) FLD: All
** blinker lgts on mtns E of fld perm removed. (1-29) No opers office.(1-29)
WESTPORT ARPT-Driftwood on fld after extremely high tides. (1-2)
WHIDBEY ISLAND NAS-AULT FLD (WHIDBEY ISLAND)-Bcn opers on IFR and from sunset to sunrise. Warm-up aprons avail. for all rnwys. Tetrahedron lgts inop. (12-12)
WILBUR ARPT-Center 200' strip avail. Equip. on fld. All taxiing on fld is on the left side of strip. (12-13)
★WOODLAND-RADIO: Jan 23, ident of Woodland FM changed to two dots, four dashes.
YAKIMA CO. ARPT (YAKIMA)-Use rnwys, taxiways only - graded areas soft, rough Tetrahedron inop. (1-11)

[redacted]

TRINIDAD-Carlsen Field-Edinburgh (North)-Rnwy closed to all Navy traffic except in emerg. Use Keres (South) rnwy.

[redacted]

**BOLLINGER ARPT (CHARLESTON)-Stn WCAW 358' twr erected at lat 38-20-26, long 81-37-45, approx 2 mi ENE (60°) true, lgtd at 1/3 levels. Flash. lgt top level. (1-14)
CLARK ARPT (WINFIELD)-Obst lgts atop 325' twrs of Rdo Stn WCHS, 9.5 mi. SE (140° true) inop. (1-20)
ELKINS ARPT-Contact Elkins Rdo or circle fld before landing. (7-16)
LOUIS BENNETT ARPT (WESTON)-Soft spots after continuous heavy rains. (1-6)
MORGANTOWN-RADIO: Range flgt-checked Jan 23, courses correctly aligned.
SCOTT FLD (BECKLEY)-Use right traffic on N course. (12-31)

[redacted]

CHAPLIN'S ARPT (PLYMOUTH)-NE/SW, NW/SE strips under const. (10-21)
CLINTONVILLE ARPT-Use plowed strips only. (1-8)
CURTISS-WRIGHT ARPT (MILWAUKEE)-Closed ngts. (9-26)
EAU CLAIRE MUN. ARPT-Use rnwys only. Shoulders rough and soft pending completion of grading opers in spring 1947. (11-18)
**GENERAL MITCHELL FLD (MILWAUKEE)-Code Bcn atop rot bcn discont. perm. (1-7) Equip. on fld days. Right turn procedure rstd to lcly based acft. All acft land according to tetrahedron unless otherwise instructed by twr. All pilots must register in Admin Bldg upon arvl and dptr. Position lgts must be turned on and operating between sunset and sunrise for all flgts to and from fld. Ditch extending 150' S of intersection NE/SW, NW/SE rnwys paralleling SE portion NW/SE rnwy for 1/2 mi. E taxiway closed. Obst lgt atop 95' chimney SW corner fld inop. (12-30)
OMRO ARPT (OMRO)-Use strips only. (1-6)

**LINGLE ARPT-New fld. Lat 42-09-15, long. 104-20-15. (10-18) See Page 28.
SHERIDAN CO. ARPT-N/S rnwy unsafe heavy acft. Taxi strips parallel all rnwys except N/S rnwy and terminate at ramp. Stay on pavement. Equip. on fld. (12-31)
SUSSEX INT, SITE 22A, CX-GT-CLOSED (snow).(2-4) These data rcvd too late for (R) symbol.
WARDWELL FLD (CASPER)-Use rnwys, taxi strips only -bal fld rough. 30 million candle pwr ceilometer projector 1000' N of bcn. (10-30)

BERMUDA APPROACH CONTROL AREA PROCEDURES:

Acft enrte to Bermuda shall set a crs to enter the Bermuda Apch Ctl Area as specifically outlined blw unless otrw authorized by the Bermuda Apch Ctl Cntr. Rtes Acft apchg Bermuda from 360° to but not inclds 60° Mag. crs shall set a crs to intercept the NE crs of the "King Baker" Rdo Rng at a point aprxly 150 nautical mis from the rdo rng. Acft apchg Bermuda from 60° to but not inclds 120° Mag. Crs shall set a crs to intercept the E crs of "King Baker" Rdo Rng at a point aprxly 150 nautical mis from rdo rng stn. Acft apchg Bermuda from 120° to but not inclds 180° Mag. crs shall set a crs to intercept the SE crs of the "How Oboe" Rdo Rng at a point aprxly 150 mis from the Rdo Rng. Acft apchg Bermuda from 180° to but not inclds 230° Mag. crs shall set a crs to intercept the SW crs of the "Nan Xray Mike" Rdo Rng at a pnt aprxly 150 nautical mis from the rdo rng. Acft apchg Bermuda from 230° to but not inclds 280° Mag. crs shall set a crs to intercept the SW crs of the "How Oboe" rdo rng at a pnt aprxly 150 nautical mis from the Rdo Rng. Acft apchg Bermuda from 280° to but not inclds 315° Mag crs shall set a crs to intercept the W crs of the "King Baker" Rdo Rng at a pnt aprxly 150 nautical mis from the Rdo Rng. Acft apchg Bermuda from 315° to but not inclds 360° Mag.crs shall set a crs to intercept the NW crs of the "How Oboe" Rdo Rng at a pnt aprxly 150 nautical mis from the Rdo Rng.

PANAMA AIRWAY TRAFFIC CONTROL AREA

The Panama Air Traffic Control Center controls all air traffic operating along airways under instrument flight conditions within approximately 200-miles of the Canal Zone. The Panama Air Traffic Control System was established in accordance with the standards promulgated in "Army-Navy-CAA, Standards for the Control of Instrument Flight Rule Traffic" (ANC-IFR) and other standard operating procedure references, and the Control Center operates substantially the same as an air traffic control center in the United States.

Clearance to fly on these airways is obtained from "Panama Air Traffic Control" through radio facilities indicated, and must be obtained before entering the Panama Air Traffic Control Area.

The Manual of Operations for Panama Air Traffic Control is CAirC Manual 55-1. Agencies expecting to use these facilities may obtain copies of this manual from, or may direct questions or suggestions to: The Panama Air Traffic Control Center, Det. 163rd ACS Squadron, APO 825, c/o Postmaster, New Orleans, La.

Clearance for departure within the control area is obtained through the airport control tower. Normally civilian aircraft entering the control area from the Northwest will obtain initial clearance through Pan-American Radio at San Jose, Costa Rica, and military aircraft through Parrita Army Airways (Parrita Range) at Parrita, Costa Rica. Aircraft entering the Control Area in the vicinity of Turbo, Colombia or departing from Turbo to enter the Control Area, will obtain original clearance through Pan-American radio at Turbo. At any rate, however, civilian aircraft may establish contact with the Control Center through Balboa Radio WHZ and military aircraft may establish contact through Albrook Army Airways (WZA).

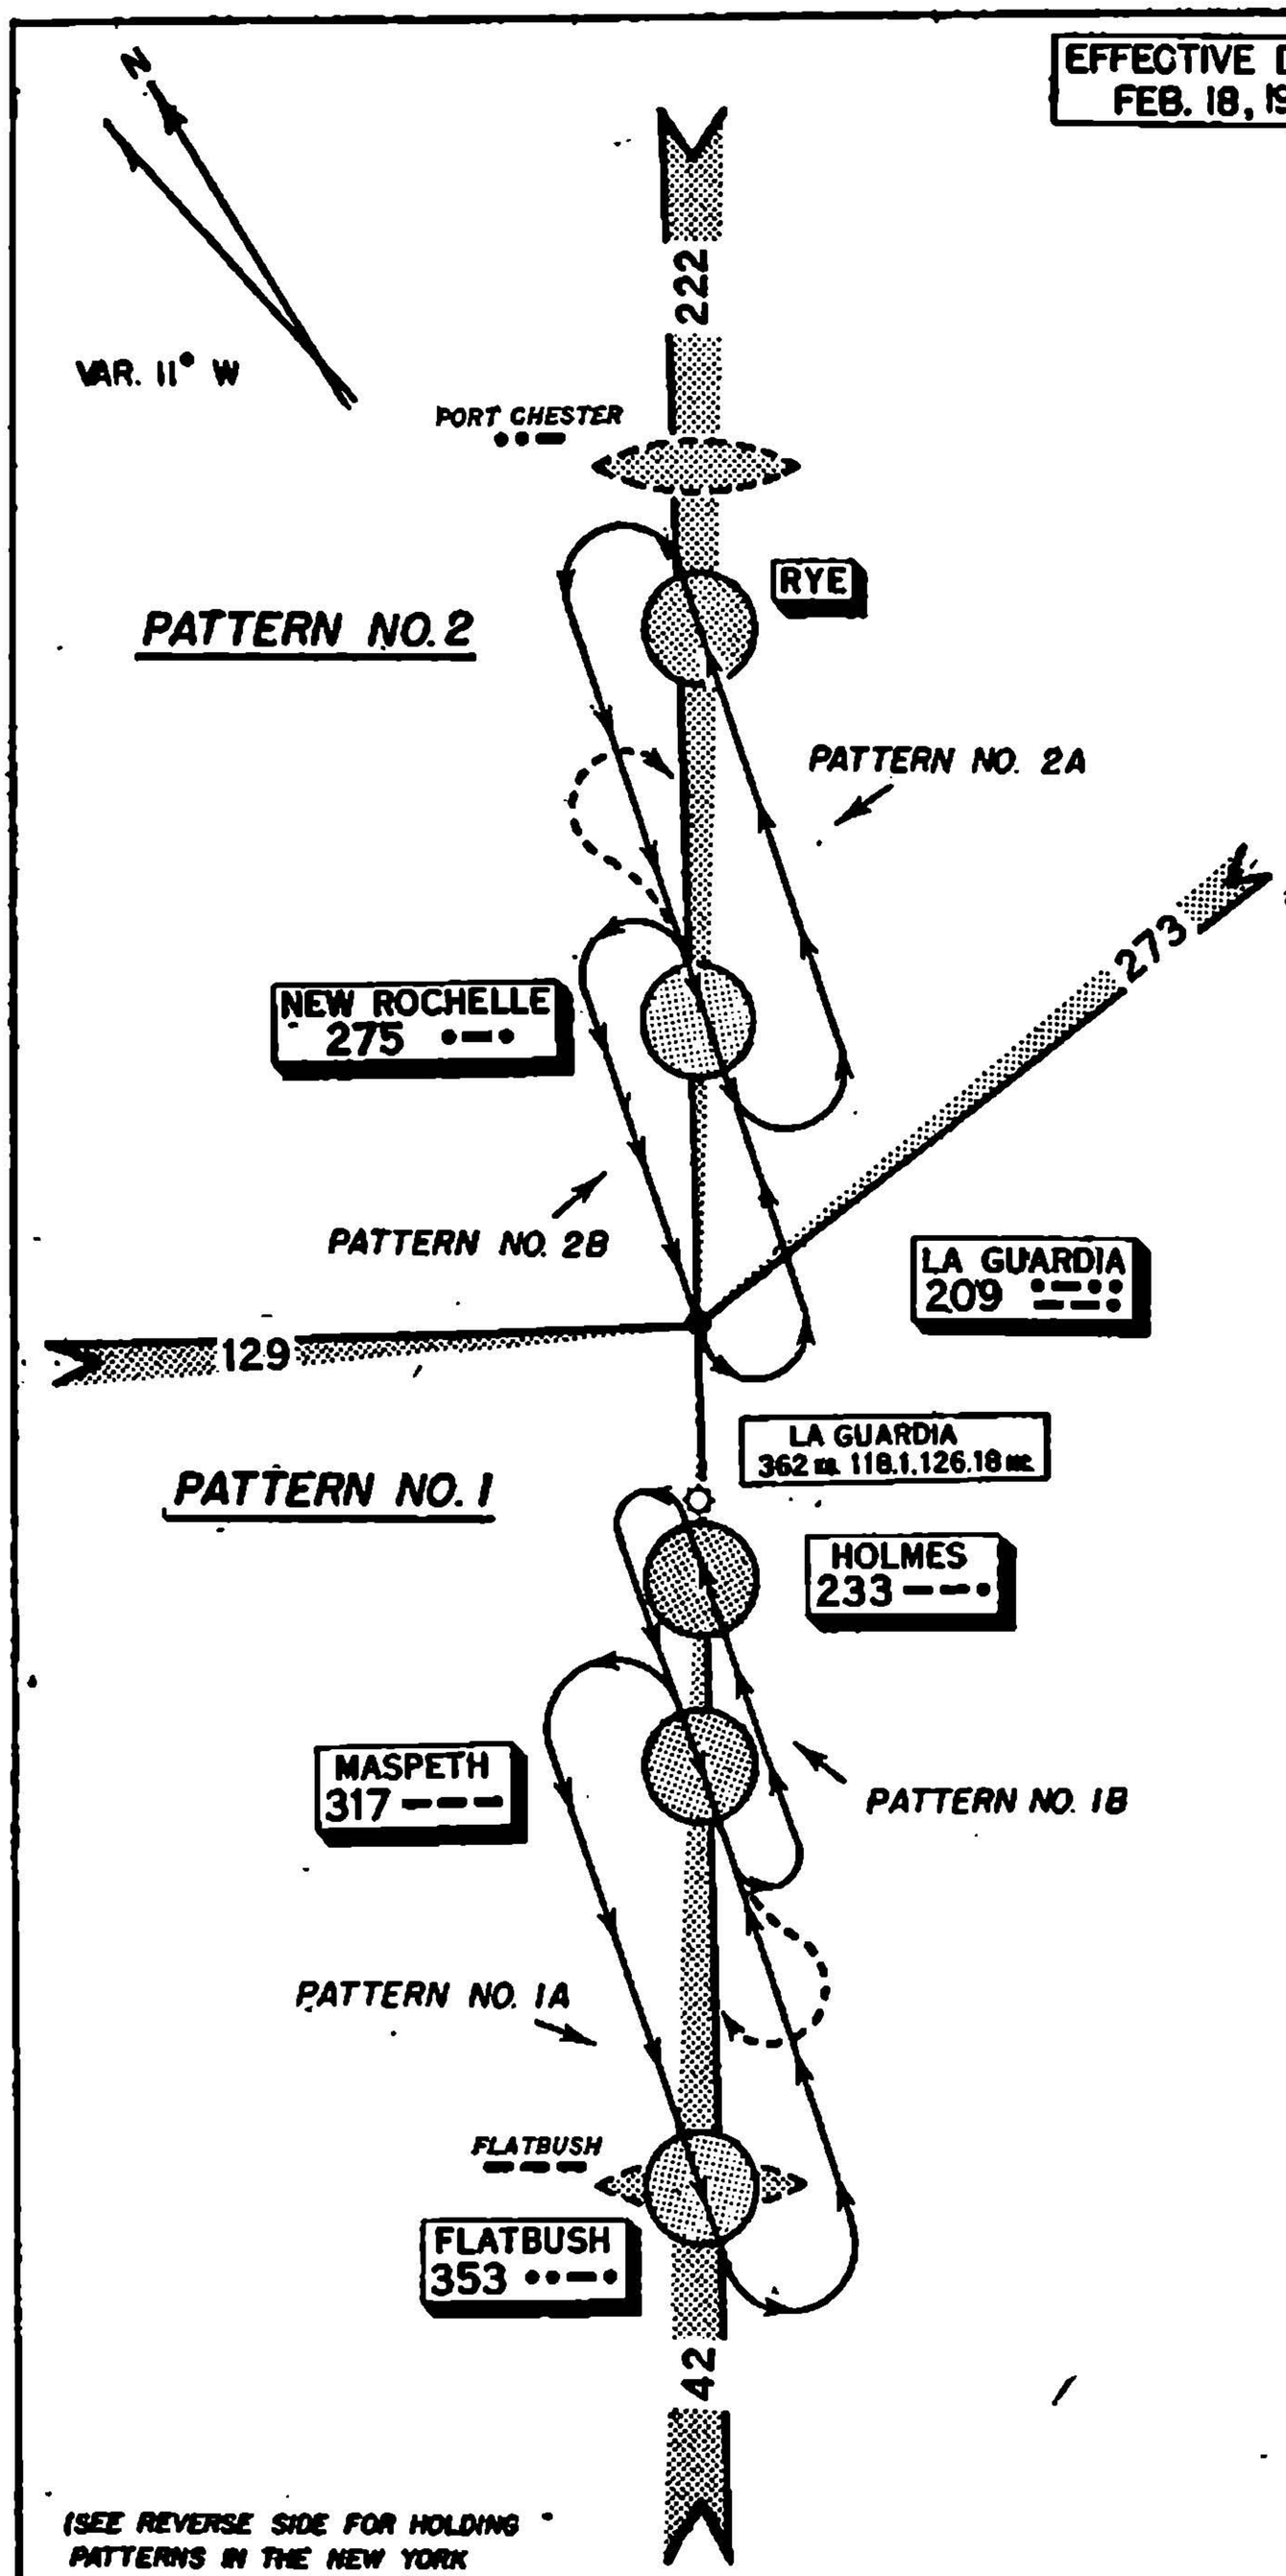
LA GUARDIA FLD. ADF HOLDING & INSTRUMENT APPROACH PROCEDURES

EFFECTIVE DATE
FEB. 18, 1947

NOTE: THIS CHART IS PRESENTED FOR ILLUSTRATIVE PURPOSES ONLY AND IS NOT TO BE USED FOR NAVIGATION.



(SEE REVERSE SIDE FOR HOLDING PATTERNS IN THE NEW YORK METROPOLITAN AREA.)

ADF HOLDING AND INSTRUMENT APPROACH PROCEDURES FOR LA GUARDIA FIELD, N. Y.

The complete patterns outlined in Holding Pattern #1 will be used for North landings and the #2 Pattern will be used for South landings.

ADF approaches and holding will be in accordance with those procedures shown, normally when the La Guardia ceiling is reported less than 1000'. La Guardia Approach Control, however, will advise in all cases of the type of holding and approaches to be made.

Holding in Patterns 1A and 2A will generally be at the 5500,6500, 7500,8500, and 9500 foot levels. Holding in Patterns 1B and 2B will be at 4500,3500, and 2500 foot levels.

Pilots will be advised when to report over Maspeth or New Rochelle while in Patterns 1B and 2B and will be given a course to steer and advised when right turns to be made for return to the La Guardia radio range courses for final approach to the airport.

Appropriate detailed information concerning these procedures and for the entire New York Metropolitan Area are contained in the New York Airway Traffic Control Center Operations Letter #14, copies may be obtained from:

Chief Controller,
New York Airway Traffic
Control Center
La Guardia Field, N.Y.

Important Note: The Rye, N.Y. locator marker was not commissioned at the time this drawing was prepared. Consult the Airman's Guide for commissioning date, frequency, and identification.

AIR NAVIGATION RADIO AIDS

LEGEND

(3) - Station guards 3105, 4495, 6210 kcs.
(4) - Station guards 3105, 4495, 6210, 3117.5 Kcs.
(7-24) - Hours of operation (7 A.M. to midnight) on a 24-hour clock basis
→ - New or revised data *

RADIO CLASS DESIGNATIONS

AC.....Approach Control Tower, CAA
B.....Scheduled Broadcast Station (broadcasts weather reports at 15 and 45 minutes after the hour unless otherwise cited)
C.....Control Tower, CAA
CA.....Control Tower, Army
CL.....Control Tower (City, County, Private, etc.)
CN.....Control Tower, Navy
D.....Distantly controlled
FM.....VHF fan type marker (100 watts)
FMK.....Compass locator station when combined with fan marker
GCA.....Ground control approach system
H.....Non-directional radio-beacon (homing), power 50 watts or more
ILS.....Instrument Landing System
IM.....VHF boundary marker
K.....Independent compass locator station
LFM.....VHF fan type marker, low powered (5 watts not over 10 miles from range)
MH.....Non-directional radio-beacon (homing), power less than 50 watts
ML.....Range (loop radiators), power less than 50 watts
MM.....VHF middle marker
MMK.....Compass locator station when combined with middle marker of Instrument Landing System
MRA.....Range (adcock, vertical radiators) power more than 50 less than 150 watts
MRL.....Range (loop radiators), power more than 50 less than 150 watts
OM.....VHF outer marker
OMK.....Compass locator when installed at outer marker site or within 5.5 miles of middle marker
P.....Point to point radio
RA.....Range (adcock, vertical radiators), power 150 watts or more
RL.....Range (loop radiators), power 150 watts or more
S.....Simultaneous (range signals and voice) type of transmitter
T.....Teletype
TX.....Principal teletype
V.....Voice communication with aircraft
VAR.....Visual-aural VHF range
W.....Without voice facilities
Z.....VHF station location marker at a range station

N.B. Variation is computed at the station. The distance from station to field is computed from the center of the range station to the nearest edge of the usable area of the airport. The bearing is that from the range station to airport or fan marker.

AIRWAY RADIO COMMUNICATIONS

GENERAL

All radio range stations (class RA, RL, MRA, MRL, ML) emit directional signals (type A2 emission) 1020 cycles per second modulation.

All radiobeacon stations (class H and MH) emit non-directional signals (type A2 emission) 1020 cycles per second modulation. Unless otherwise noted, all stations, other than class MH, operate continuously within their assigned hours of service except during interruptions for voice transmission on the same frequencies where simultaneous transmission is not available and during shutdowns for maintenance purposes. Class MH stations operate on request unless otherwise cited. The effective range of an MH facility is ordinarily 25 miles.

Compass locators are low-powered nondirectional facilities operating in the 200-415 kc. band. They are installed near airports to make it easier for pilots to make instrument approaches. When holding is required, they also help the pilot follow a more precise holding pattern. Compass locators, however, should not be depended upon as long range navigational aids since they are rarely useful at distances of over 15 or 20 miles.

Voice communications facilities are available unless "W" (without voice) is included in the classification. Examples: SMRAW, MRLW, HW, HWT. Transmission of voice on a frequency other than the range frequency is indicated as MRLW-V. When no "W" is included in station class, the "V" indicates voice feature on two frequencies, namely, range frequency and, generally, VHF of 116.1 mcs.

The classification designation "B" denotes that the station broadcasts airway and meteorological information on a scheduled basis at 15 and 45 minutes past each hour unless otherwise cited.

All Civil Aeronautics Administration stations equipped for voice communications with aircraft stand continuous listening watches on the frequencies of 3105, 4495, and 6210 kcs., unless otherwise cited.

* AT THE BOTTOM OF THE LAST COLUMN, UNDER THE HEADING OF NEW RADIO FACILITIES, BORDERED BY TINTED LINE WILL BE FOUND, OUT OF ALPHABETICAL ALIGNMENT, ALL THE NEW RADIO FACILITIES TABULATED AFTER THE TYPE FOR THAT PAGE HAD BEEN ORIGINALLY SET UP.

N.B. For Digest of A.T.C. and Communications Procedures, *see FLIGHT INFORMATION MANUAL*

AIRPORT DATA
LEGEND

NAME

(When city and airport names are identical, the airport name is omitted in the interest of space-conservation)

(A) Airport owned or leased in whole or in part by Army
(CG) Airport owned or leased in whole or in part by Coast Guard
(N) Airport owned or leased in whole or in part by Navy
CAA Intermediate Field
(P) Non-military airport available for use by military aircraft (See Note 3)

N.B. If the airport name is followed by (A) for Army, (N) for Navy, or (CG) for Coast Guard, the field is exclusively an Army, Navy, or Coast Guard field. If the field is not exclusively Army, Navy, or Coast Guard and may be used by civilians, no (A), (N) or (CG) follows the airport name.

CLASS

SIZE

4h: Length of longest landing strip (unpaved) in hundreds of feet
40h: Length of longest hard-surfaced runway in hundreds of feet (Seaplane landing areas over 5 miles in length are classified as unlimited and indicated as "unl").

N.B. Only the length of the longest runway is cited, and its direction is not indicated. Space restrictions occasioned this policy, but logic justified it. The logical assumption may be made that runways have been laid out in accordance with the local wind rose. Therefore, in all calms, or gentle-angling winds, or winds aligned with the longest runway, the longest runway will be used. When a wind not aligned with the longest runway is of such intensity that the longest runway cannot be used, this wind makes the use of runway aligned with the wind, even though much shorter than the longest runway, sufficiently long from a safety viewpoint. Too, prior knowledge that there is, for example, a NW/SE runway is of little value to a pilot if, when he arrives over the field the wind is blowing too strongly from another direction to use that runway. Finally, the larger the number indicating the longest runway length, the greater is the assurance of a sufficient number of runways for all-wind coverage.

RADIO

R1: Voice availability via tower, range (or homing device), or voice station
R2: Range (or homing device) and tower
R3: Range (or homing device), tower, and instrument landing system

LIGHTS

L2: Incomplete lighting, either flood or portable runway lights
L4: Beacon only
L5: Beacon and boundary
L6: Beacon, boundary, and obstruction
L7: Beacon, boundary, and flood
L8: Beacon, boundary, obstruction, and runway contact
(L8): Identical to L8 except that runway contact lights are high intensity
L9: Beacon, boundary, obstruction, flood, runway contact, and instrument approach
(L9): Identical to L9 except that instrument approach lights are high intensity

(The class always indicates the highest element available but does not necessarily include all intermediate elements)

SERVICING

S1: Fuel
S2: Fuel, storage
S3: Fuel, storage, minor aircraft repairs
S4: Fuel, storage, minor aircraft, and minor engine repairs
S5: Fuel, storage, major aircraft, and minor engine repairs
S6: Fuel, storage, major aircraft, and major engine repairs

N.B. Very often small civilian fields (particularly in non-metropolitan areas) will have no full-time attendant. Frequently, servicing at such fields in isolated communities is available only by circling the town to attract the operator's attention.
These fields are often recognizable by airport class, comparable to, for example, "1S S1". "1S S1" suggests that the field is not too large, and that the field may not have a full-time attendant even though fuel is stored there. Lack of radio or lighting facilities, indicated by the absence of an "R" or "L" in the airport class, is a further indication that a full-time attendant may not be available. Absence of an "S" (servicing) indicates definitely that fuel, if available at all, is available only by truck from town. Any field carrying no indication of radio (R), lights (L), or servicing (S) in airport class column should be used with caution, especially a field of the small category. Fields of this nature may be inactive or not maintained, and thus dangerous for use.

NOTES

1. "(NC)" not charted. Indicates not charted because of insufficient data or inability to verify
2. → New or revised data. *
3. "(P)" in CITY-AIRPORT NAME column indicates: (1) those municipal airports improved with public funds and covered by an ag agreement between the municipality and the U.S. Government permitting government planes to use such fields in common with others and without charge, to the extent possible without restriction of non-military operations or (2) other civil airports for which legal permits covering their limited use by military aircraft have been procured and filed with the real estate agency of the War Department.
4. "Effingham Int., 10, L8-ID" in CITY-AIRPORT NAME column indicates that the airport is Effingham CAA Intermediate Field, 5the 10, on the St. Louis-Indianapolis Airway. Municipal airports where the lights are maintained by the CAA are listed similarly except that there is no prefixed star or "Int."
5. In Location column, the word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.
6. In Remarks column:
   (a) "91 oct." indicates octane rating of fuel available.
   (b) "CLOSED" indicates closed to all civil aircraft and all transient military aircraft except on official business this station or in emergency.
   (c) "Port. B-2 lights" indicates cone-mounted lights outlining runways. These lights are portable and may be shifted from runway to runway.
   (d) "TEMP INACTIVE, NO FACS." indicates AAF airfields used either exclusively by the AAF or municipal airfields used jointly by the AAF and civil interests at which both the Army and the civil interests are inactive. Such airfields will be available to military aircraft at the discretion of the Commanding Officer of the organization to which the aircraft is assigned (See Special Notice).
   (e) "ARMY TEMP INACTIVE, CIVIL FACS." indicates municipal airfields used jointly by the AAF and civil interests at which the Army facilities are inactive but civil facilities are available. Such fields may be used by military aircraft, however, only commercial service is available.
   (f) "PRIVATE" indicates field is available for owner only, and not to be used by others except in emergency.
   (g) OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, clearly discernible for contact operations, are frequently omitted, for example. On the other hand, all pole lines are cited.
   (h) "Fld lgts on prior req." indicates field lights are available only by previous phone call, telegram, or letter. It must be remembered that most fields do not have 24-hour operation. Accordingly, the field lights, indicated for such a lighted field (and, in some instances, even the rotating beacons) are available only by prior request. When an airport classification indicates a lighted field, and there is no notation in the REMARKS column, the field lights burn all night or will be turned on when a radio request is made or a plane circles the field.
   (i) "FEE" indicates landing fee for private aircraft
7. Airline stop airport names are capitalized.

FLIGHT PLANNING CHARTS

LEGEND

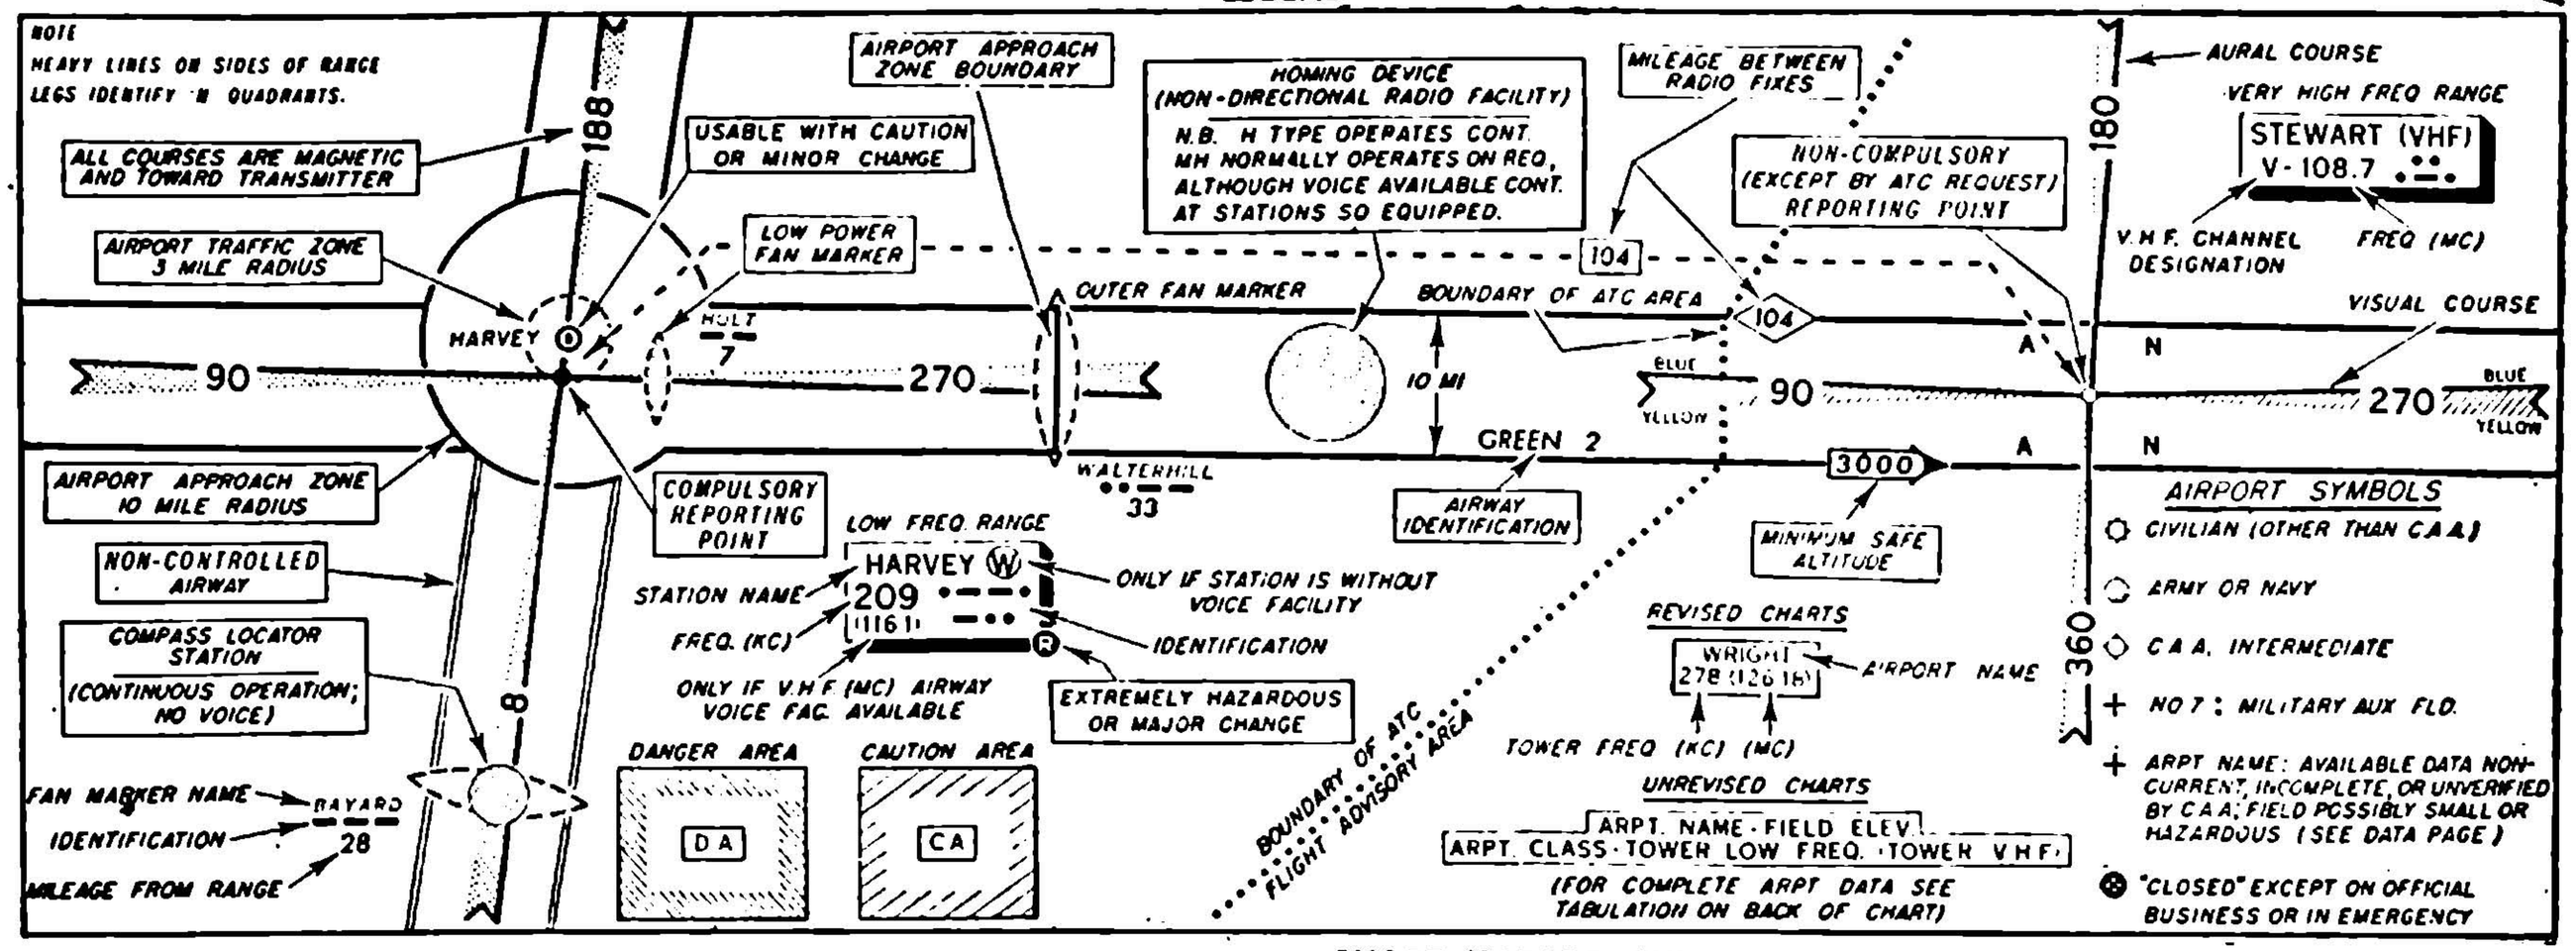

CHART CONTENTS

The Flight Planning Charts, in addition to the warning Ⓡ and caution Ⓞ symbols, indicate: (1) all aeronautical radio facilities except air carrier stations; (2) all minimum safe altitudes and fix mileages: (3) all Army and Navy fields and CAA intermediate fields, and all active civilian airports; (4) all danger and caution areas; (5) all designated airways. These charts indicate all facilities, and the current status thereof, on record with the CAA as of 0001 E.S.T. each alternate Tuesday.

CHART PURPOSE AND USE

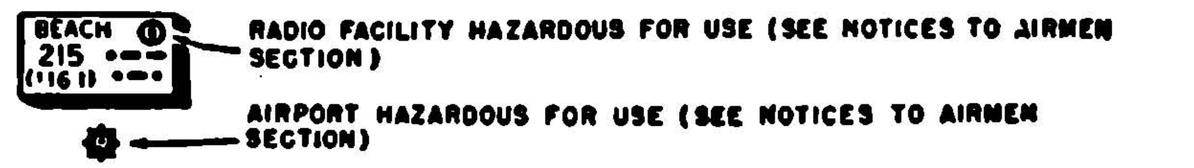
The primary purpose of these charts is to facilitate the planning and execution of cross-country flights. The user should check the charts for the symboled Ⓡ or Ⓞ items between his point of departure and his destination. If there is none, there is no necessity for him to read the Notices to Airmen section as far as temporary items are concerned. As for permanent changes - all major ones, such as new field, abandoned fields, range frequency changes, etc., are currently reflected on the charts For record-keeping purposes and for the correction of charts and publications, however, the Notices to Airmen section should be carefully read.

VHF CHANNEL LETTER DESIGNATORS

Channel letter designators are being shown on the Flight Planning Charts herein only as an aid to pilots in their use of unmodified military equipment. It is emphasized that not all very-high frequencies now in use have channel letter designators. Standardization of air-borne equipment in this respect has not been effected, nor is it expected to be along the lines of one-letter designators because of the large number of frequencies which eventually will be in use.

CHART HAZARD SYMBOLS

The current status of facilities and hazards as reported to the CAA is indicated by the symbol system. An airport closed because of construction, an inoperative range, a revised range quadrant identification or range frequency, or course realignment of 20° or more, for example, are indicated by the symbol Ⓡ for red, or warning. An airport under construction but usable, or an inoperative control tower, on the other hand, is indicated by the symbol Ⓞ for orange, or caution.



RANGE COURSE LENGTHS

In general, the length of radio range courses shown herein indicates the approximate location where it is expected that a pilot will tune from one radio range to the next one along his route of flight. Such change-over points, however, are not mandatory, and it is expected that a pilot will use his best judgment in selecting change-over points that will best serve his needs.

Warning

Radio range courses are subject to disturbances that result in multiple courses, and signal fades and surges over rough country. Pilots flying over unfamiliar routes are cautioned to be on the alert to detect these vagaries, particularly over mountainous terrain.

CAUTION- MANY SEAPLANE LANDING AREAS IN THE NORTH ARE CLOSED DURING WINTER MONTHS BECAUSE OF ICE.

OPERATION OF SEAPLANES ON THE NEW YORK STATE CANAL SYSTEM:

AN OFFICIAL COMPLAINT HAS BEEN RECEIVED FROM THE STATE OF NEW YORK, DEPARTMENT OF PUBLIC WORKS, THAT THE NEW YORK STATE CANAL CHANNEL IS BEING USED FOR THE TAKING OFF AND LANDING OF AIRCRAFT. THIS CHANNEL IS VERY NARROW AND HAS NUMEROUS CURVES. AIRCRAFT LANDINGS AND TAKE-OFFS ON THIS CHANNEL, THEREFORE, ARE DANGEROUS AND PRESENT A HAZARD TO CANAL TRAFFIC AND SMALL BOATS. ALL AIRMEN ARE CAUTIONED THAT SUCH ACTIVITIES MAY CONSTITUTE CARELESS OR RECKLESS OPERATION OF AIRCRAFT.

R-radio facilities. L-lighting facilities. S-servicing. (See page 11) → NEW OR REVISED DATA **N.B.** Seaplane bases and anchorages are not charted or indexed.

NOTICES TO AIRMEN

INTRODUCTION

PROCEDURAL STATEMENT: The "Airman's Guide" no longer has a separate section for the DIRECTORY OF AIRPORT or the AIR NAVIGATION RADIO AIDS. These two sections are now inserted as data pages between the flight planning charts. To retain the two-page chart flow, however, the data pages are found on the reverse sides of the charts rather than facing them. On the data pages are tabulated all the data covering the facilities charts on the reverse sides and formerly found in the DIRECTORY OF AIRPORTS and AIR NAVIGATION RADIO AIDS sections.

To facilitate reference to a particular facility, an Index of Facility Locations with the parenthetical number of the page on which the locale is charted has been added to the revised AIRMAN'S GUIDE, e.g., Chicago (139) On the back of page 139 will be found the Air Navigation Radio Aids and the Directory of Airports data covering Chicago

Because of the serious paper shortage every means of reducing the Airman's Guide bulk has been investigated. Codification and considerable abbreviation are already being utilized. No material may be deleted, however, in this paper conservation program because surveys have revealed that subscribers consider all parts of the Guide essential Consequently, about the ultimate step in this bulk-reduction direction has just been taken. The data pages backing the charts now serve, where possible, as notam pages. Resultantly, most of the new data formerly notamized in the Notices to Airmen section with prefixed large stars or double asterisks are no longer carried in that section. Only commissionings, abandonments, or changes so potentially hazardous that they are indicated with Ⓡ (for red flag) symbols on the charts, are now cited in the Notices to Airmen section

Notamizing on the charts is effected by use of the super-imposed Ⓡ and Ⓞ symbols The Ⓡ (for red flag) indicates a very hazardous condition or a major change The Ⓞ symbol (for orange flag) indicates a minor change or hazardous condition with the facility still usable with caution. The pertinent details to which these symbols refer will be found listed in the Notices to Airmen section under the facility name (and state) by which they are charted.

Notamizing on the data pages is effected by the use of prefixed arrows as in the former Air Navigation Radio Aids publication All changes from the previous issue, whether cited in the Notices to Airmen section, or not, are indicated by the prefixed arrows. Following are examples of changes notamized only on the data pages: field obstruction, servicing, elevation, location, and runway length changes Because of the use of the prefixed arrows as new data indicators, a further innovation had to be adopted This is a tinted horizontal line following the last tabulated facility and titled either New Radio Facilities or New Airports.

Space below the tinted horizontal lines on the data pages has been reserved as a supplement for new radio aids and airports whose data were received after the data pages were originally typed. Revisions to existing airports and radio aids are super-imposed on the old data, but new airports and radio aids are listed, necessarily out of alphabetical alignment, below the tinted horizontal lines until the page is re-typed.

In summation: (a) On the data pages backing the charts, new data or revisions are indicated by arrows; (b) in the Notices to Airmen, citations covering new or revised radio data are prefixed by one large star " ★ ". Citations covering new or revised airport, or miscellaneous data, are prefixed by two asterisks "**".

All temporary conditions (field soft, runway under construction, range course out of alignment, etc.) are cited in full until they are no longer in effect. When a citation carries a permanent item and a temporary item, the permanent item is underlined. Parenthetical date at end of item indicates time item was reported.

To conform to chart practice, all facility data are listed in the Notices to Airmen section and on data pages alphabetically by states and by facility name. Thus, an airport will be found listed alphabetically under its own name rather than under its locale's name. If the airport or radio facility name is other than that of the city in which it is located, the location is shown in parenthesis after the facility name.

SPECIAL NOTICES

CIVIL FACILITY DATA: Please advise immediately the Office of Aviation Information, Attention A-250, C.A.A., Department of Commerce, Washington 25, D.C., whenever temporary conditions covering civil airports or navigational aids begin or terminate, data revisions are effected, or flight hazards are erected or removed.

ARMY DATA: Advice covering Air Forces Fields or Air Forces Operations on civil fields, or AAF Radio Facilities, and Danger or Caution Area activation, as well as requests for approval for the closing of any Army airfields to transient military aircraft for a period in excess of 10 days should be directed to: COMMANDING GENERAL, AIR TRANSPORT COMMAND, WASHINGTON 25, D.C. ATTENTION: HEADQUARTERS FLIGHT SERVICE, FLIGHT OPERATIONS. Information to be published will be coordinated and submitted to the C.A.A.

NAVY FACILITY DATA: In accordance with Hydrographic Office Memorandum for Aviators No. 9, July 29, 1946, Hydrographic Office information concerning naval and marine corps air stations and facilities, including changes in field facilities, operation rules, air/ground communications facilities, instrument approach procedures and navigational aids, should be directed to: The Division of Air Navigation, Hydrographic Office, Washington 25, D.C., for transmittal to the C.A.A. In accordance with Aviation Circular Letter No. 96-46 of June 13, 1946, approval for the closing of any naval or marine corps air station or facility to transient military aircraft for a period in excess of 10 days must be obtained from the Chief of Naval Operations. Also, approval is to be obtained from the Chief of Naval Operations before relocation or modification of any aid to air navigation, such as reorientation of radio ranges.

USE OF AIRPORTS BY MILITARY AIRCRAFT: (1) AAF Regulation 85-2. The attention of Army clearance personnel and of Army pilots is invited to the provisions of Section III, AAF Regulation 85-2 and AAF Regulation 85-2A, which state in part: "The use by Army aircraft of civil airports which have not been leased, purchased, or where AP-4 or similar landing rights agreements have not been negotiated by the Federal Government, is not authorized except in case of emergency or in case of official business Each instance of flights in AAF aircraft for official business will be covered by competent air force, major AAF command, or higher authority orders. Each instance of flights for official business in organic aircraft of the Army Ground Forces will be covered by written orders of the commander of the unit to which the aircraft is assigned. These written orders must designate the field of intended landing. Unauthorized use of such airports is a substantiating factor in claims for damage with accompanying requests to the Government to bear maintenance and repair costs or to provide Government equipment at such civil airports. Notation will be made by clearing authorities in Remarks Section of AAF Form 23 that competent authority authorized use of such fields and will be transmitted in Remarks Section of the flight plan as "authorized flight"

All landings by military aircraft without competent written orders on inactive, temporarily inactive Army airfields and civilian airports, except in case of emergency, will be limited to the ones identified by letters 'A, N, or P' in the Airman's Guide. It is the responsibility of the various air forces, major AAF commands and certain field attivities under the direct control of the Commanding General, AAF, to prevent unauthorized use of airfields and airports as outlined in this Regulation".

(2) "Official Business", within the meaning of AAF Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units or organizations at or near the airfield selected for landing for the purpose of conducting transactions

✓ Indicates new or revised Special Notice

in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service or other items attendant with itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

(3) Policy on Army Use of Temporarily Inactive Army Airfields. (a) Municipal airfields which have been used jointly by the Army Air Forces and civil interests and at which Army facilities are temporarily inactive but the civil facilities are still active, may continue to be used by military aircraft. No servicing other than that provided by commercial concerns will be available. Such airfields will be identified herein by the following notice: "Army temp inactive - civil facs". (b) Temporarily inactive Army airfields used exclusively by the Army Air Forces (either owned or leased) or municipal airfields used jointly by the Army Air Forces with civil interests at which both Army and civil facilities are inactive will be available to military aircraft at the discretion of the commanding officer of the organization to which the aircraft is assigned. Such airfields will be identified herein by the following notice: "Temp inactive-no facs." Above policy statement is not to be construed as countermanding any AAF regulations or letters governing command use of municipal airports or Army airfields.

(4) "CLOSED" Army Airfields. Certain airfields under the jurisdiction in whole or in part of the Army Air Forces will be listed from time to time as "CLOSED" under the provisions of AAF Regulation 60-23 or under specific direction of the CG, AAF. Such airfields will be used on official business only under written orders in each case.

CHANGES IN LISTING PROCEDURE FOR ARMY AIR FORCE AIRFIELDS: In an effort to simplify the use of the Airman's Guide within the printing limitations imposed by the Government Printing Office, notices on Army airfields that are closed or temporarily inactive or surplus to Army Air Forces will be carried in the Directory of Airports section thereby eliminating the necessity for checking in more than one section to obtain the correct status of an airport. Minor restrictions such as hours of operation, service, and hazards will continue to be listed in the Notices to Airmen Section. The following procedure is now in effect:

(a) The term "CLOSED" will be shown in Directory Section only, for all AAF airfields that are closed to all transient traffic except on official business or in emergency. The legend page of the Directory will give such a definition for "CLOSED". Airports that have been declared surplus to the AAF and on which permits have not been issued for civil use or which have not been otherwise disposed of by the W.A.A. will also be listed as "CLOSED".

(b) AAF airfields that now carry notices of "Army temp inactive-civil facs" or "Temp inactive. No facs (See Special Notice re use)" will now have such citations carried in the Directory Section only.

MILITARY AND NAVAL LANDINGS IN NEWFOUNDLAND: All military and naval aircraft landing in Newfoundland should use Harmon Field at Stephenville or Naval Operating Base at Argentia. Gander has very limited military facilities and is reserved for commercial and weather diverted military aircraft.

RESTRICTIONS ON AAF HELICOPTERS: YR-5A, R-5A, YR-5D, R-5D (except as indicated below*) and YR-5E helicopters may be released for flight only upon compliance with T.O. 01-230 HB-13 and -14.

*R-5D helicopters No. 43-46643 and subsequent have been modified by the contractor and may be released for flights.

ARMY FOREIGN CLEARING STATIONS: Under the authority of AAF Regulation 61-4 Army aircraft with destinations listed as follows or returning therefrom to the United States will clear through the stations indicated: AFRICA - Morrison Field, Fla.; Washington National Airport, D.C.; or Westover Field, Mass. ALASKA - McChord Field, Wash.; or Great Falls AAF, Mont. BERMUDA - Mitchel Field, N. Y.; Morrison Field, Fla.; Washington National Airport, D.C.; or Westover Field, Mass. CANADA - Great Falls AAF, Mont.; McChord Field, Wash.; Washington National Airport, D.C.; Selfridge Field, Mich.; or Westover Field, Mass. CANAL ZONE, CENTRAL AMERICA, MEXICO, AND SOUTH AMERICA - March Field, Calif.; Kelly Field, Tex.; or Morrison Field, Fla. CARIBBEAN - Morrison Field, Fla. ENGLAND, GREENLAND, ICELAND, NOVA SCOTIA, NEWFOUNDLAND, AND NORTH IRELAND - Washington National Airport, D.C., and Westover Field, Mass. (Note: Selfridge Field also will clear for Nova Scotia and Newfoundland). HAWAII - Fairfield-Suisun AAF, Calif.

OPERATING PROCEDURE WITH FLIGHT SERVICE UNDER AAF MILITARY FLIGHT SERVICE COMMUNICATIONS SYSTEM (PLAN 62): (1) Departure from AAF Bases. No change. Reference: AAF Regulations 15-23 and 60-22. (2) Departure from non-AAF Bases. AAF aircraft departing from non-AAF bases will file a complete flight plan with, and secure approval from the nearest Flight Service Center prior to takeoff, or as outlined in AAF Regulation 60-22. Communications with a Flight Service Center may be established by direct telephone to the center; or by a radio call to the nearest AAF Base or AACS Airways radio station. In addition to the Flight Service clearance, pilots contemplating flight under Instrument Flight Rule conditions will secure a CAA Airway Traffic Control clearance. The CAA clearance normally can be obtained more rapidly by contacting CAA directly through CAA Communications facilities. If CAA Communications facilities are not available, however, the CAA clearance may be obtained through Flight Service. (3) Change of Contact Flight Rule (CFR) Flight Plan Enroute. AAF aircraft requiring a change of route or point of first intended landing of a CFR flight plan enroute will contact Flight Service through an AACS Airway radio station or control tower, submit the information required by AAF Regulation 60-22 and, when necessary, secure Flight Service approval. (4) Change of Instrument Flight Rule (IFR) Flight Plan, or CFR to IFR, or IFR to CFR enroute. AAF aircraft requiring a change of route, altitude, point to first intended landing, cruising speed or alternate airport, or change from CFR to IFR or IFR to CFR enroute, will contact a CAA communications station for coordination and approval by CAA Airway Traffic Control and Flight Service. If communications with CAA communications station cannot be established, AACS Airways radio station will be contacted for coordination and approval by CAA Airway Traffic Control and Flight Service. (5) CFR Position Reports. When flying under CFR conditions, pilots will make position reports, wherever practicable, to AACS Airway radio stations enroute and receive any necessary advisories from Flight Service. (6) IFR Position Reports. When flying under IFR conditions, pilots will first make position reports to CAA communication stations as heretofore required, and will then make position reports to AACS Airways radio stations in order that the responsible Flight Service Center may furnish any necessary advisories. (7) Voice Calls. AACS Airways radio stations will be called by the location name followed by the word "airways", such as "Bolling Airways". This is distinct from the CAA radio call system which uses the location name followed by the word "radio", such as "Washington Radio". (8) All VHF equipped aircraft will be provided with a card to be prominently mounted near the VHF control box which will specify button, frequency, and service obtainable. An index of AACS Airways Stations within the U.S., together with a listing of the assigned frequencies, may be found on pages 94 and 95 of T.O. 08-15-1. The following table displays the channels and frequencies normally used to contact the various communication installations:

Button	Frequency	Service	
A	116.10 mc.	CAA AIRWAYS (RANGE STATIONS)	*AACS Airways (Plan 62)
B	126.18 mc.	CONTROL TOWERS	
C	137.88 mc.	AACS AIRWAYS (PLAN 62)	*Control Towers
D	140.58 mc.	MILITARY EMERGENCY AND GCA FINAL APPROACH CONTROL	

*Available for service indicated on a secondary basis.

(9) It will be some time before all AAF aircraft are equipped for operation on AACS Airways frequencies. It is not the intent that pilots flying aircraft not so equipped attempt to make position reports to Flight Service as described above. Emergency Flight Service advisories, however, may be transmitted to such aircraft on the AAF control tower frequency. Aircraft which are equipped for operation on AACS Airways frequencies will contact airways stations whenever possible rather than AAF control towers.
(10) The following list of telephone numbers will be used for contacting military Flight Service Centers:

CAA AREA	FLIGHT SERVICE AREA	PHONE NO.
Washington Pittsburgh New York Boston	Olmsted Flight Service Center Middletown, Penna.	Steelton 93887 " 93470
Jacksonville Miami	MacDill Flight Service Center Tampa, Fla	Tampa H-4871
Memphis New Orleans Atlanta	Maxwell Flight Service Center Montgomery, Ala	Montgomery 89
Detroit Cincinnati St. Louis Chicago	Wright Flight Service Center Dayton, Ohio	Osborn 88691,88692
Fort Worth San Antonio	Fort Worth Flight Service Center Fort Worth, Texas	Ft Worth 77251
Cleveland Denver Minneapolis Kansas City	Lowry Flight Service Center Denver, Colo	Denver LD 116 Denver LD 117
Los Angeles Albuquerque El Paso	March Flight Service Center Riverside, Calif	Riverside 7107,7108
Oakland Salt Lake	Hamilton Flight Service Center San Rafael, Calif	San Rafael 770
Great Falls Seattle	McChord Flight Service Center Tacoma, Washington	Tacoma LD 20 Tacoma LD 21

IFR CLEARANCE OF ARMY AIRCRAFT: Except as outlined below, no Army aircraft will be cleared for instrument flight unless such aircraft is equipped with a low frequency radio receiver capable of reception in the 200 to 400 kc. band. The BC-1206 (Detrola) receiver is not considered adequate as regards compliance with this directive. Aircraft not so equipped may be permitted to clear under IFR when the instrument type clearance is necessitated by reduced local visibility caused by fog, smoke, or haze, or when the flight will not be conducted under conditions which will require navigation by radio.

RESTRICTION ON FLIGHT OF AAF AIRCRAFT IN NEW YORK CITY AREA: No AAF aircraft except those on scheduled transport operations will be cleared to New York City Area unless point of first intended landing is Mitchel Field, Hempstead, L.I., N.Y. When instrument conditions prevail in New York City Area, no Army aircraft except those on scheduled transport operations will land at or take off from other than Mitchel Field. When contact conditions prevail in New York City Area, aircraft which have been cleared for Mitchel Field but which desire to land at other authorized fields in New York City Area will, when approaching New York City Area, obtain clearance from Olmsted Flight Service Center through normal communication means. For purposes of these instructions, New York City Area is defined as a circle 50 miles in diameter centered on southern tip of Manhattan Island. Contact weather New York Area will be considered to be 2000' ceiling, 3 miles visibility, both day and night. When cloud conditions exist below 2000', flight conditions will be considered IFR.

✓ OPERATION OF ARMY HF/DF STATIONS: HF direction finding net listed on page 91, AAF Radio Facility Charts, dated Jan. 7, 1947, is unreliable, and bearings and fixes given should be used with caution. This condition will exist for an indefinite period due to malfunctioning of equipment.

✓ VHF CHANNEL ASSIGNMENTS:

Following are Army assignments:			Following are Navy assignments:		
CHANNEL		ARMY FREQUENCY	CHANNEL		NAVY FREQUENCY
A	--	116.1	A	--	116.1
B	--	126.18	B	--	126.18
C	--	137.88	C	--	140.58
D	--	140.58	D	--	142.74
G	--	137.70	1	--	124.38
H	--	134.10	2	--	128.70
U	--	108.3	3	--	142.02
V	--	108.7	4	--	142.56
W	--	109.1	5	--	144.36
			6	--	146.16

✓ NAVY GROUND CONTROL APPROACH (GCA): Allocations of frequencies, both HF and VHF, for Navy GCA use have been coordinated with the AAF. Universal frequencies allocated primarily for GCA operational use are as follows: HF Communications - 3475,4890,6640 kcs.; Universal frequencies allocated primarily for Navy GCA operational use are as follows: VHF Communications - 134.64, 142.02, 143.64 mcs. As a safety precaution, Navy GCA Units will also be prepared to control aircraft on 140.58 mcs, the Navy emergency frequency. Navy GCA is available and particularly anxious to aid any plane in emergency. It is prepared to transmit on HF from 2000 to 18,100 kcs and to receive on 1500 to 9050 kcs. for emergency. To provide a means whereby Navy aircraft may receive assistance from Army GCA Units and vice-versa, the following agreement will govern: (a) Army GCA Units will at all times be prepared to control Navy Aircraft on 140.58 mcs. (b) Navy GCA Units will be prepared to control AAF aircraft on 140.58 mcs. It is the responsibility of the pilot desiring GCA assistance to establish communication with the appropriate control tower for preliminary approach instructions. The pilot will then be instructed as to the proper frequency for contacting the GCA Unit. Navy GCA Operational Units are located as follows: Whidbey Island NAS, Wash.; Charlestown NAAS, R.I.; Oakland NAS, Calif.; Miramar MCAS, Calif.; Seattle NAS, Wash.; Olathe NAS, Kans.; Norfolk NAS (East), Va.; Patuxent River NAS, Md.; Moffett Field NAS, Calif.; Floyd Bennett NAS, N. Y.; Corpus Christi NAS, Tex.; Saufley Field NAAS, Fla.; Lee Field, Green Cove Springs, Fla.

FOREIGN ENTRY PROCEDURES, AIRPORTS OF ENTRY, CUSTOMS REPORTS, U.S. CIVIL AIRCRAFT CLEARANCE FOR FOREIGN COUNTRIES, CANADIAN REGULATIONS FOR CFR FLIGHTS, CANADIAN INSTRUMENT FLIGHT RULE FLIGHT, FLIGHT INTO PANAMA CANAL ZONE, CARIBBEAN AREA - RADIOBEACONS FOR USE WITH

ADF: These procedures and regulations were all incorporated into the Flight Information Manual, Vol. 1, No. 2, dated Jan. 1, 1947. Only amendments to the data contained in the Manual will hereafter be carried in the Airman's Guide.

FLIGHT INFORMATION MANUAL CORRECTIONS AND ADDITIONS: Standard Broadcast Stations, Chapter V: (a) Correct station KTRB, Modesto, Calif., page 32, by changing height of tower to 298'; (b) Correct station KOB, Albuquerque, N. Mex., page 38, by changing frequency to 770 kcs. and by deleting reference to station under 1030 kcs. on page 27, and by adding station under 770 kcs. on page 26. Airports of Entry, Chapter X: Correct Airports of Entry listing by adding Akron, Arpt, Ohio; Baudette Arpt, Minn.; and Chalks Seaplane Base, Miami, Fla.; and by revising the listing to read as follows: Presque Isle AAF, Me.; Pembina Int. Field, N. D.; Eagle Pass Mun. Arpt, Tex.; and Dinner Key Coast Guard Air Station, Fla.; and Toronto, Ont. (Island or Malton). Instrument Approach Procedures, Chapter XI: (a) Albany, N. Y., Albany Airport-add to initial approach column: N-1200' (Saratoga Springs FM, final); S-2900' (Medway FM); W-2500' (Auriesville FM). (b) Atlanta, Ga., Airport-Procedure No. 2-change alt. over range to: 1800' over East Point LFM, and change bear. and dist. to 151°, 3.5 mi. from East Point LFM. (c) Bangor, Me., Dow Field-change alt over range to 1000'. (d) Birmingham, Ala., Airport-change name of FM on the N leg to Bradford. (e) Casper, Wyo., Wardwell Field-(1) Add to initial approach column: E-6000' (Parkerton FM, final); S-10,000' E leg Sinclair), and to remarks column add 8000' terrain both sides of S leg within 8 mi.; (2) Correct alt. over range to 6000', and bear. and dist. to 256°, 2.0 mi. (f) Colorado Springs, Colo., Peterson Field-correct missed approach alt. to 10,000'. (g) Elkins, W. Va., Airport-change initial approach from E-5000'... to N-5000' (Morgantown Range). (h) Jacksonville, Fla., Airport -add to initial approach column: N-1200' (Brunswick H fac.). (i) Joplin, Mo., Airport-change initial approach from E-Min. enroute alt. to: E-2500' (SW leg Springfield). Correct bear. and distance to 172°, 6.2 mi. (j) Key West, Fla., NAS-correct missed approach to: Climb to 1500' on E leg within 25 miles. (k) Key West, Fla., Meacham Field-Add to initial approach column: E-1300' (Stock Island LFM). Correct final approach to W. (l) Lynchburg, Va. Preston Glenn Arpt.-Change initial approach to NE-4000' (NW leg Richmond). (m) Melbourne, Fla., Airport-correct initial approach to: S-1200' (N leg West Palm Beach). (n) Muscle Shoals, Ala., Airport-change missed approach to: climb to 2000' on W leg within 25 miles. (o) New Castle (Wilmington), Dela., New Castle Co. Arpt.-change procedure turn at 25 mi. to: 2000'. (p) Orlando, Fla., AAB-correct el. to 115'. (q) Philadelphia, Pa. (PG Range), Philadelphia Southwest Airport-add to initial approach column: W-800' (Boothwyn FM, final). (r) Presque Isle, Me. (ZQ Range), Presque Isle AAF-add to initial approach column; NE-1500' (Limestone FM, final). (s) Insert the following in correct alphabetical order: St. Paul, Minn., St. Paul Airport-El. 704' (Make let-down to Wold Chamberlain Airport. Fly contact from Wold Chamberlain Airport to St. Paul Airport). (t) Tallahassee, Fla., Dale Mabry Field-Change initial approach alt. to: E-1500' (NW leg Cross City). (u) Tri-City, Tenn., Airport-add to procedure turn column: 7000' alt. for 15, 20, and 25 mi. distances. Delete remark limiting procedure turn to 12 mi.

SAN JUAN, P.R. PRE-FLIGHT CLEARANCES: The Isla Grande Airport at San Juan Puerto Rico, is a part of the U.S. Naval Air Station, San Juan. Commercial air carriers may not operate at this field without receiving specific authorization from the Chief of Naval Operations, Washington, D.C. The commanding officer NAS, San Juan, may grant permission for one or two isolated landings. In any case, proper authority must be obtained prior to landing at San Juan. Privately owned aircraft in a ferry status must obtain permission from the commanding officer before landing at Isla Grande Airport.

MEHREBAL AIRPORT, TEHRAN FACILITIES: Following services available daily from 0230 to 1430 GMT; point to point on 6690 kcs., call sign EPD; air to ground on 6590 kcs., call sign EPD; and tower radio telephone on 6640 kcs., call Mehrabal. MF beacon is also available on 310 kcs on request, call sign TR.

BERMUDA APPROACH CONTROL AREA PROCEDURES: Aircraft enroute to Bermuda shall set a course to enter the Bermuda Approach Control Area as specifically outlined below unless otherwise authorized by the Bermuda Approach Control Center. Routes aircraft approaching Bermuda from 360° to, but not including, 60° mag. course, shall set a course to intercept the NE course of the "King Baker" Radio Range at a point approximately 150 nautical miles from the radio range. Aircraft approaching Bermuda from 60° to but not including 120° mag. Course shall set a course to intercept the E course of "King Baker" Radio Range at a point approximately 150 nautical miles from radio range station. Aircraft approaching Bermuda from 120° to but not including 180° mag course shall set a course to intercept the SE course of the "How Oboe" Radio Range at a point approximately 150 miles from the radio range. Aircraft approaching Bermuda from 180° to but not including 230° mag. course shall set a course to intercept the SW course of the "Nan Xray Mike" Radio Range at a point approximately 150 nautical miles from the radio range. Aircraft approaching Bermuda from 230° to but not including 280° mag. course shall set a course to intercept the SW course of the "How Oboe" radio range at a point approximately 150 nautical miles from the radio range. Aircraft approaching Bermuda from 280° to but not including 315° mag. course shall set a course to intercept the W course of the "King Baker" Radio Range at a point approximately 150 nautical miles from the radio range. Aircraft approaching Bermuda from 315° to, but not including 360° mag. course shall set a course to intercept the NW course of the "How Oboe" Radio Range at a point approximately 150 nautical miles from the radio range.

STANLEY FIELD, BELIZE, BRITISH HONDURAS FACILITIES: Civil Airport - Located at lat. 17-32-10 N, long 88-18-20 W. Elev. 16'. One rnwy: 5000 x 150' ENE/WSW. Surround country: SW quadrant highest level 3700', 55 mi. distant, all other approaches flat. 91,100 oct. No night lighting facilities. Radio facs.: Radio beacon identification is "BZ". Transmits on 392 kcs, Type A2 emission; Twr transmits on 4575 kcs., guards 6210 kcs., Type A3 emission; ground-air-ground transmits on 6515 kcs., guards 6515 kcs., Type A3 emisston; A/C Guard transmits on 6720 kcs., guards 6720 kcs. Type A1 emission. Facilities available between the hours of 1330Z and 2400Z.

PANAMA CANAL ZONE CLEARANCE AND ROUTE FREQUENCIES: Balboa Overseas-Foreign Aeronautical Communications Station WHZ continuously guards 3105 and 6210 kcs. for calls from itinerant aircraft. Calls will be answered on route frequencies as follows: Balboa-San Jose-Managua 3082.5/5162.5 kc voice. Balboa-Barranquilla-La Guria. Balboa-Turbo-Medillen 3067.5/5602.5 kc voice. Balboa-Kingston. Balboa-Habana 3082.5/5692.5 kc voice. Balboa-Guayaquil 3076/6597 kc CW. Army clearance required prior to entering zone 200 mile radius Balboa.

NORTH ATLANTIC OCEAN STATION VESSELS: Commander, North Atlantic Ocean Patrol has advised that, effective 0001 GMT, January 15, 1947, all ocean station vessels began guarding distress frequency 140.58 mcs continuously at sea in addition to distress frequencies 500 and 8280 kcs. Ocean station vessels will continue to guard 116.1 mcs., when on station for routine VHF communications.

NEW YORK OCEANIC AIR TRAFFIC CONTROL PROCEDURES: For the information of those agencies intending trans-oceanic operations in the New York Oceanic Control Area and which are not in possession of PICAO manuals for procedures the following is promulgated: The New York Oceanic Airway Traffic Control Area has been activated in accordance with PICAO directives and New York Oceanic Traffic Control Operations Letter No. 1.

This area is bounded on the N by the 43rd parallel, on the E by the 45th meridian, on the S by the 30th parallel, on the W by a line paralleling the E Coast of the U.S 100 nautical miles off-shore.

All aircraft operating therein must do so under an approved instrument flight plan, the composition of which follows: aircraft registration, aircraft radio call, type of aircraft, person in command, point of departure, cruising altitude, route of flight, point of first intended landing, proposed true airspeed, transmitting and receiving frequencies, proposed or actual departure time, estimated elapsed time to arrival point, alternate airdrome, amount of fuel in pounds, any other pertinent data deemed necessary for control purposes. Flight plans shall be addressed to New York Ocean Control (preferably through WSY, New York) prior to entering this area.

Position reports transmitted by radio telegraphy will be composed in the following abbreviated form: the position will be determined as soon as practicable after the first hour of flight and each hour thereafter, and the reports transmitted to the ground station at the the earliest opportunity. Standard position reports shall be in the following form: U G G G G Q L L L L Long Long Long Long PD Fox Charlie Tare 1 Tare 2 Tare 3 and Sugar 1 Sugar 2 Sugar 3 How 1 How 2 How 3 Fox 1 Fox 2 Fox 3 Fox 4 Fox 5.

Position report code Uncle, indication by one figure of the system of units utilized according to the following: 0 for metric system,5 for English system George indication of time given in hour figures based on GMT. Queen indication by 1 figure of octant in which aircraft is situated according to the following: N lat. 0 equals 0° to 90°; W 1 equals 90° W to 180°; 2 equals 180° to 90° E; 3 equals 90° E to 0°; S lat.5 equals 0° to 90° W; 6 equals 90° W to 180°; 7 equals 180° to 90° E; 8 equals 90° to 0°. Love indication of lat., in 4 figures (degrees and minutes); long. indication of longitude in 4 figures (degrees and minutes) dropping hundredths degrees. Peter Dog indication by 1 figure of means used to determine the position according to the following: 1 equals dead reckoning; 2 equals single position line; 3 equals single radio bearing position line; 4 equals radio fix; 5 equals celestial fix; 6 equals visual or ground fix; 7 equals Loran or console fix; 8 equals radar fix George Easy, Easy; 9 equals celestial and radio fix. Fox Charlie indication by 1 figure, flight conditions according to the following: 0 equals visual flight rules at all levels; 1 equals visual flight low clouds; 2 equals on top; 3 equals between layers; 4 equals medium icing; 5 equals heavy icing; 6 equals in and out of clouds 25% IFR; 7 equals ditto 50% IFR; 8 equals in and out of clouds 75% IFR; 9 equals continuous IFR; Tare one, Tare two, Tare three indication of true track in degrees given in three figures Tare one equals hundredths; Tare 2 equals tenths; Tare 3 equals single unit Sugar 1,Sugar 2,Sugar 3 indication of ground speed in 3 figures, Sugar 1 in hundredths; Sugar 2 equals tenths; Sugar 3 equals single unit. How 1, How 2, How 3 indication of altitude in 3 figures. How 1 equals ten thousands of feet or thousands of meters; How 2 equals thousands of feet or hundreds of meters; How 3 equals hundreds of feet or tenths of meters. Fox 1, Fox 2, Fox 3, Fox 4, Fox 5 weight of fuel used given in 5 figures. Fox 1 equals ten thousands; Fox 2 thousands; Fox 3 hundredths; Fox 4 equals tenths, Fox 5 equals single units. Units to be used ground speed; metric system kilometers per hour, English system knots; altitude: metric system tenths of meters; English system hundreds of feet; weight of fuel: English system pounds.

Example message: "0 1 4 1 5 0 3 0 4 5 3 3 0 7 2 2 9 0 3 2 5 1 2 5 0 2 4 5 0" meaning "at 1 4 1 5 GMT, position lat. 30°45' N, long. 53° 30' W Loran or Console determined position - on top - true track 290° - groundspeed 325 M.P.H. - altitude 12,500' - weight of fuel used 2450 lbs".

Position reports should be addressed to New York Ocean Control. Position reports transmitted by radio telegraphy should be directed to WSY if possible. If military aircraft are not equipped to transmit on PICAO frequencies to give their position, reports will be directed to a military air/ground station suitably equipped to relay messages to New York Ocean Control. Publications outlining PICAO procedures for air navigation services are available in Publications and Document Section, Dominion Square Building, Montreal, Canada. New York Oceanic Traffic Control Operations Letter No. 1, available New York Airway Traffic Control Center, La Guardia Field.

All flights operating in the New York Oceanic Control Area will be cleared at the following altitudes: Magnetic headings of from 0° to and including 179°, odd thousand foot levels. Magnetic headings of from 180° to and including 359°, even thousand foot levels.

GUARDING OF 3117.5 KCS. BY CAA AIRWAY COMMUNICATIONS STATIONS: All airway communications stations located at points also served by CAA airport traffic control towers discontinued continuous listening watches on 3117.5 kcs. Hereafter, communications stations at these locations will establish watches on 3117.5 kcs. upon "request" and during such hours as the associated tower is closed.

NEW PRIVATE FLIER FREQUENCIES: All CAA Communications Stations and Towers are discontinuing receiving watches on 131.7 and 131 9 mcs. as new equipment becomes available to guard the new private flier frequencies of 123.1 mcs. for transmission to CAA Communications Stations and 122.5 mcs. for transmission to CAA operated towers. Practically all CAA towers now guard 122.5 mcs. but the communications stations program is not fully effective yet because of non-receipt of the new receivers.

✓ C.A.A. COMMUNICATIONS STATIONS GUARDING 122.1 MCS.: CALIFORNIA - Los Angeles, Oakland; COLORADO - Pueblo; FLORIDA - Daytona Beach, Jacksonville, Key West, Melbourne, Miami, Orlando, Tallahassee, Tampa, West Palm Beach; GEORGIA - Alma, Atlanta, Augusta, Macon, Savannah; IOWA - Des Moines; MISSISSIPPI - Jackson; MISSOURI - Kansas City; MONTANA - Helena; NEBRASKA - North Platte, Omaha; NORTH CAROLINA - Greensboro; OREGON - Pendleton, Portland; SOUTH CAROLINA - Charleston, Florence; TENNESSEE - Knoxville, Memphis, Nashville; TEXAS - Abilene, Dallas, Fort Worth; WASHINGTON - Everett, Yakima, Spokane; WYOMING - Casper.

Arpt; WISCONSIN - General Mitchell Field, Milwaukee; WYOMING - Cheyenne Arpt.

U.S. WEATHER BROADCASTS AND TRANSMISSIONS: The time of observation for all weather reports is 30 minutes after the hour, unless otherwise announced. Pilots enroute are requested to avoid, if possible, calling airway communications stations at or about 15 and 45 minutes past the hour to request weather information, as such calls may delay starting of scheduled broadcasts and cause inconvenience to other persons who are dependent on the broadcasts for weather reports.

RADIOTELEPHONE COMMUNICATIONS: The word ROGER in radiotelephone communications means "I have received all of your last transmission", and its use in any other sense by CAA stations and towers is not authorized. In order to avoid confusion it is suggested that pilots engaging in air-ground contacts also limit the use of ROGER to acknowledgment of transmissions.

PILOTS' ATTITUDE TOWARD FEDERAL AIRWAYS LIGHTING FACILITIES: The CAA is conducting a survey to ascertain from pilots throughout the United States whether or not airway beacons and course lights are aids to flying safety. The results of this survey will determine the future policy as regards the retention of these beacons and lights. The questionnaires (Form ACA-1691) are now being distributed. It will be appreciated if all concerned will cooperate by completing this form and forwarding it to the Civil Aeronautics Administration, Assistant Administrator for Federal Airways, Washington 25, D.C., Attention: A-54, within ten days after receipt.

✓ SURVEY OF AIRCRAFT OWNERS: The CAA is conducting a survey to obtain better information on the kind and amount of personal flying now being done in the country, and shortly will send out 25,000 survey cards. By choosing a good "sample" of the personal fliers, the CAA hopes to obtain information that will adequately reflect the activities of the 35,000 owners of aircraft in the United States. It is highly important, however, that as many of the 25,000 cards as possible be returned, since this is the only means by which the CAA can obtain authoritative information on which to base its statistics. These statistics will be used by the whole industry, and the safety figures resulting from them may have effect on many things, including the insurance rates being charged in private flying. All survey card recipients are urged to fill in the questionnaires and return them as soon as possible.

INSTRUMENT FLIGHT, NEW YORK METROPOLITAN AREA: Effective Feb.18,1947, revised arrival, departure, holding, instrument approach and control procedures utilizing new radio aids were placed in effect in New York Metropolitan Area. Non-air-carrier pilots proposing instrument flight thru this area or to or from Newark,Mitchel,or La Guardia Flds should write the Chief Controller, New York ATC Center,Box 575,LaGuardia Fld, N.Y., for copies of applicable Operations Letters describing these procedures.

NEW YORK OVERSEAS FOREIGN AERONAUTICAL STATION: Effective Dec. 4, 1946, the broadcast of navigation reports by WSY changed times of transmission and added the frequencies as follows: At 0200, 0400, 0600, 0800, 1000 and 1200 GMT broadcast is made simultaneously on 3380, 8720, and 12395 kcs. At 1400, 1600, 1800, 2000, 2200, and 2400 GMT, broadcast will be made simultaneously on 3380, 5960, 8720, 12395 and 16250 kcs. Form and contents of broadcast remain unchanged. Concurrently, the hourly metar and notam broadcast are transmitted at 55 minutes past each hour between the hours of 0055 through 1155 GMT on 3380, 8720, and 12395 kcs.,and between the hours of 1255 and 2355 GMT on 3380,5960,8720,12395,16250 kcs. Contents of the metar and notam broadcast remain unchanged. The broadcast at 25 minutes past each hour was discontinued. Comments concerning the effectiveness of the above services will be appreciated.

AIRPORT APPROACH ZONES AND AIRPORT TRAFFIC ZONES CFR MINIMA: Part 60 specifies that CFR traffic within Airport Traffic Zones or Airport Approach Zones must maintain 500' vertical and 2000' horizontal separation from the clouds unless given traffic clearance by the control tower or control center concerned. Even under such clearance CFR flights must remain clear of clouds. These airport traffic zones and airport approach zones are indicated on the Flight Planning Charts of the Airman's Guide, and all recently revised Coast and Geodetic Survey Aeronautical Charts. In the interest of safety CFR flights must maintain the 500' and 2000' minima specified above while in these circular charted zones. (See Chapter VIII of the Flight Information Manual for air traffic control procedures and weather minima).

✓ REDESIGNATION OF CIVIL AIRWAYS: Effective January 15, 1947, Part 600.1 of the Regulations of the Administrator was amended to read in whole or in part as follows:
Section 600.10222, Red Civil Airway No. 23 (U. S. - Canadian Border to New York, N.Y.)
. . . New York, N. Y. (La Guardia Field) range station to the intersection of the E leg of New York, N. Y. (La Guardia) and the NE leg of Mitchel Field, N.Y. (Army).
Section 600.10232 Red Civil Airway No. 33 (Gordonsville, Va. to Boston, Mass.).
From Gordonsville, Va. range station via Arcola, Va. range station; the intersection of the NE leg of Arcola, Va. and the SW leg of Allentown, Pa.; Allentown, Pa. range station . . .
Section 600.10317 Blue Civil Airway No. 18 (Philadelphia, Pa. to Burlington, Vt.).
From the intersection of the NE leg of Philadelphia, Pa. and the SW leg of Idlewild, N.Y. via Idlewild, N. Y. range station to the intersection of the NE leg of Idlewild, N. Y., and the E leg of New York, N. Y. (La Guardia). From the intersection of the NW leg of New York, N. Y. (La Guardia) and the SW leg of New Hackensack, N. Y. via the New Hackensack, N. Y. range station, excluding that portion which lies more than 2 miles W of the SW leg of New Hackensack, N. Y. between a point 30 mi. NE from the intersection of the NW leg of New York, N. Y. (La Guardia) and the SW leg of New Hackensack, N. Y. and a point 10 miles S of New Hackensack, N. Y.; Albany, N. Y. range station to Burlington, Vt. range station.

✓ REDESIGNATION OF AIRWAY TRAFFIC CONTROL AREAS: Effective Jan. 16, 1947, Part 601 of the Regulations of the Administrator was amended to read in whole or in part as follows:
Section 601.10233 Red Civil Airway No. 33 A.T.C. Areas (Gordonsville, Va. to Boston, Mass.). All of Red Civil Airway No. 33.
Section 601 10318 Blue Civil Airway No. 18 A.T.C. Areas (Philadelphia,Pa.,to Burlington, Vt.). All of Blue Civil Airway No. 18.

✓ REDESIGNATION OF RADIO FIXES: Effective Jan. 16, 1947, Part 601.4 of the

Regulations of the Administrator was amended in whole or in part as follows:
Section 601.40293 Red Civil Airway No. 33 (Gordonsville, Va., to Boston, Mass.). Arcola, Va. range station.
Section 601.40318 Blue Civil Airway No. 18 (Philadelphia, Pa. to Burlington, Vt.). No radio fix designation.

NOTICE TO ALL FLYING PERSONNEL: Because of the increase in aircraft operations, both civil and military, in recent months, the number of complaints regarding airplane noise nuisance has reached such proportions that the advancement of aviation and development of new airports are in danger of being severely retarded.

To reduce the number of such complaints, it is requested that the following practices be put into effect by all fliers: (1) Discontinue all unnecessary low flying. (2) When weather and traffic volume permit, increase altitudes of all traffic patterns that require flight over inhabited areas. (3) Re-route channels of approach and departure to avoid residential and business districts whenever possible. (4) If the airport is located near inhabited areas, reduce power and increase pitch of propellers as quickly as possible during take-off so as to keep engine and propeller noises at a minimum. (5) Keep rpm's set at a minimum required operational setting when low flying over populated areas is necessary.

CIVIL USAGE OF MILITARY FIELDS: Army and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

PERSONAL POSSESSION OF PILOT CERTIFICATE: Effective Feb. 15, 1947, Part 43.400 of the Civil Air Regulations will be amended to read as follows: 43.400 Pilot Certificates: No person shall pilot a civil aircraft within the U.S. unless he holds a valid pilot certificate with appropriate ratings issued by the Administrator or an appropriate and valid foreign pilot certificate. Such certificate shall be in the personal possession of the pilot at all times while piloting aircraft and shall be presented for examination to any inspector of the Administration or State or local law enforcement officer upon the request of such inspector or enforcement officer.

OLD PILOT CERTIFICATES MUST BE EXCHANGED: All pilot certificates issued prior to July 1, 1945, will expire on July 1, 1947. Such certificates may be exchanged for the new-type certificates at any time prior to their expiration date. No red tape or written application is involved in the exchange. The pilot merely presents his old-type certificate to a CAA inspector, who immediately issues a new-type certificate. A pilot can arrange to make the exchange at a CAA regional or district office, or during a CAA inspection trip to his local airport. The new-type certificates will be valid for at least 24 months from the date of issue, and the Civil Aeronautics Board is considering extending them for an even longer period.

LOW FLIGHT OVER FUR RANCHES: Numerous complaints have been received regarding low flying over fur ranches. This low flying, especially during mating season, has resulted in very definite dollar and cents losses to fur breeders. They request that pilots avoid flying over their ranches, particularly at low altitudes, stating that the ranches can be identified by the large number of small animal inclosures or pens.

INSTRUMENT APPROACH PROCEDURE MINIMA: Part 61.752 of the C.A.R. was amended Jan. 10, 1947, and now reads as follows: "61.572 No instrument approach procedure shall be executed or landing made at an airport when the latest U.S. Weather Bureau weather report at the airport indicates the ceiling or visibility to be less than that prescribed by the Administrator for landing at such airport".

AERONAUTICAL CHART AND PUBLICATION CORRECTIONS: (a) Correct "TO-08-15-3", page 104, by showing the let-down procedure for Portland, Ore. as follows: Portland FM is located on S leg of Portland radio range rather than on the N side of range station; Northern FM is Woodland rather than Willamette.

(b) Correct "TO-08-15-1", page 29, by showing the minimum altitudes for Red Airway 19, Goshen to Grand Rapids as follows: 3000' northbound - 4000' southbound; Page 25, by showing the minimum altitudes for Blue Airway 20, Allentown to Philadelphia as follows: 3000' northbound - 4000' southbound; Page 53, by showing the minimum altitudes for Blue Airway 28, Columbia to Charleston as follows: 2000' southbound-3000' northbound; Chart 23, by showing Gardner intersection as the intersection of the NE course of the Westover range and the NW course of the Boston Range; Chart 23, by showing Greenfield intersection as the intersection of the NE course of the Westfield-range and the SE course of the Albany range; Page 43, by changing the hours of operation of Independence AAF, Kans. Tower from 0800 to 2000 to 0700 to 1900; Page 28, by showing the correct class of Chanute Field, Ill. Range as SBMRAZ; Page 101, by correcting "Check List of Proper Voice Radio Procedure for Position Reporting and Change of Flight Plan", so that B, I, Change of Altitude only, and B, II, Change of Route and/or destination, are shown as requiring approval by both CAA Airway Traffic Control and by Army Flight Service in all 3 instances of change; Page 56, by showing landing field class of Craig Field as P53HL5, as the maximum strength of runways is 40,000 lbs.; Page 96, by showing Mitchel Field, N. Y. operating on 4765 kcs. rather than Moody Field, Ga.

(c) Correct Pilots Handbook, by showing the Missed approach procedure for Patterson Field as follows: "Climb to 2500' on the NE leg and make a 180° turn to the right, South of the E leg of Dayton Range"; by showing the Fairfield Fan Marker as unreliable.

(d) Correct Chicago Sectional Aeronautical Chart, dated Dec. 24, 1946, by changing the bearing on the NE leg of Lafayette, Ind. radio range to: 230°, instead of 320°; Milwaukee Sectional Aeronautical Chart, dated Dec. 31, 1946, by changing the bearing on the S leg of Milwaukee, Wis. radio range to read 178° instead of 187°.

WEATHER REPORTING SERVICE

Weather Reporting Station	Type of Station		Effective Date
Montpelier, Vt. (Barre-Montpelier Airport)	Hourly	Closed	1-12-47

New Hackensack, N. Y. (New Hackensack Airport)	Hourly	Opened	
	Lat. 41°38'; Long. 75°53'; Elev. 156'		
San Nicolas Island, Calif.	3 and 6 Hourly	Reestablished	
	Lat. 33°14'; Long. 119°28'; Elev. 502'		

Note: Hourly weather reporting stations at Ontario, Ore. & Gooding, Idaho were discont and supplementary weather stations estabi ished in lieu thereof. Lewiston, Idaho, supplementary weather reporting station discontinued and hourly reporting station opened in lieu thereof. Effective Feb. 1, 1947, terminal forecasts became available for Millville (Vineland), N. J., (Millville Municipal Airport), and Martinsburg, W. Va., (Shepherd Field).

TELETYPE NOTAMS: Throughout the year climatic conditions (snow storms, floods, etc.) render many fields temporarily unusable or unsafe. In addition, there are intermittent maintenance operations in progress on many fields. Radio facilities suffer temporary power failures or course misalignments, and lighting facilities are temporarily inoperative. Because these temporary conditions cannot be given immediate coverage in the "Airman's Guide", full cognizance must be taken of Teletype Notam service which gives the desired coverage on any facility or field at which teletype transmitting stations are based. Cross-country pilots, accordingly, should consult these Teletype Notams for latest available data on air navigation aids. These teletype notams are posted in CAA Communications Stations and in all Army Air Field and Naval Air Station Operations Offices having teletype drops.

N.B.

AIRPORT TRAFFIC CONTROL PROCEDURES: (a) Planes with 2-way radio - should establ ish communication with control tower when 15 miles from the airport of destination and before taxiing or taking off.

(b) Planes without receivers, when approaching tower-controlled fields and befor taxiing and taking off, should be on the alert for and be guided by light gun signals. (See AAF Regulation 100-4, dated March 4, 1944, and CAR Digest or Manual 60).

(c) Flashing tetrahedron lights, as well as the daylight operation of rotating beacons coupled with flashing red code lights, indicate suspension of CFR traffic.

AIR NAVIGATION AID DATA

All radio facilities except towers are C.A.A. facilities unless otherwise cited. All towers are listed by operating agency. All range bearings are magnetic inbearings. All fan markers and station location markers operate on 75 mcs. All radio facilities operate continuously unless otherwise specified.

LEGEND

** - New or revised airport, danger area, or miscellaneous data to be inscribed on charts or added to records.

★ - New or revised radio data to be inscribed on charts or added to records.

ALABAMA

BARIN NAAS EAST & WEST FLDS (FOLEY)-Closed to trans acft (1-9)

BATES FLD (MOBILE)-RADIO: Feb. 18, CAA will operate twr; traffic controlled by lgt gun only from 0800 to 1800 daily. (2-14)

BIRMINGHAM ARPT-Closed to civil. acft not equipped with operating rcvr. No landings on sodded areas. Ctn ngts or under IFR, plant S of fld has long taxi and parking strips resembling rnwys. No svcg mil acft 2200 to 0600. No maintenance. (1-18)

★BROOKLEY FLD (MOBILE)-RADIO: Army HF/DF stn when in operation will operate from 0700 to 1700 daily. Stn temp inop. (2-17). AACS, ground to air stn inop on freqs. of 8200, 4845, 4595 kcs.; transmitting freq of 2862 kcs inop. (2-11) FLD: soft-use rnwys, taxi strips only. No 91 oct. (10-4)

CAMP SIBERT AAF (ATTALLA)-CLOSED TO ALL ACFT.

CENTRE ARPT-In wet weather, avail. lgt acft only. (12-16)

CHASTAIN'S ARPT (PRICHARD)-2600' of E/W strip avail., mrkd. (11-2)

COLUMBIANA ARPT-N end strip rough, rocky. (12-16)

CRAIG FLD (SELMA)-RADIO: Army DF stn inop. (12-20). FLD: Bndry lgts inop. (11-15)

DANNELLY FLD (MONTGOMERY)-NE taxi strip closed (parked acft) (8-12)

EUTAW ARPT-NW 600' NW/SE strip soft with large holes and 50' trees 150' from SE end. Use NE/SW strip. (2-11)

GUNTER FLD (MONTGOMERY)-Use rnwys only. Sod areas adj rnwys and taxi strips soft. Use Maxwell Fld for trans svcg. (1-10)

HARTSELLE ARPT-Graded area rough. Fld soft when wet. Use W side of strip. (3-3)

HUNTSVILLE-Bombing and mortar firing is being conducted within the following described area: beginning at the Tennessee River Channel at lat. 34-34-30, long. 86-44; due N to Southern RR; easterly along RR to long. 86-42; due S to said river; SW along river to point of beginning.

★MAXWELL FLD (MONTGOMERY)-RADIO: Mag. var. 4° E. Army range courses are now: 33°, 85°, 213°, 265°. (2-6) FLD: At ngt or under IFR conditions large depot 1 mi S looks like arpt and lgts give impression of parallel rnwys. (10-17)

**VISTA ARPT (KENNEWICK)-This is still a navy fld and will hereafter be carried as Vista OLF. (1-20) See page 4.
★WALLA WALLA AAF-RADIO: Army twr now transmits on 396 kcs, 126.18 mcs. (2-10) FID: No opers office. Equip. on fld days Mon thru Fri. (2-10)
WESTPORT ARPT-Driftwood on fld after extremely high tides. (1-2)
WHIDBEY ISLAND NAS-AULT FID (WHIDBEY ISLAND)-Bcn operates during IFR and from sunset to sunrise. Warm-up aprons avail. for all rnwys. Tetrahedron lgts inop. (12-12)
WILBUR ARPT-Center 200' strip avail. Equip. on fld. All taxiing on fld is on the left side of strip. (12-13)
YAKIMA CO. ARPT (YAKIMA)-Use rnwys, taxiways only-graded areas soft, rough. Tetrahedron inop. (1-11)

WEST INDIES

TRINIDAD-Carlsen Field-Edinburgh (North)-Rnwy closed to all Navy traffic except in emerg. Use Xeres (South) rnwy.

WEST VIRGINIA

BOLLINGER FID (CHARLESTON)-Obst lgts on 240' rdo stn WKNA 5 mi N (360°) true inop. (2-13)
ELKINS ARPT-Contact Elkins Rdo or circle fld before landing. (7-16)
LOUIS BENNETT ARPT (WESTON)-Soft spots after continuous heavy rains. (1-6)
SCOTT FID (BECKLEY)-Use right traffic on N course. (12-31)

WISCONSIN

CHAPLIN'S ARPK (PLYMOUTH)-NE/SW, NW/SE strips under const. (10-21)
CLINTONVILLE ARPT-Use plowed strips only. (1-8)

CURTISS-WRIGHT ARPT (MILWAUKEE)-Closed ngts. (9-26)
EAU CLAIRE MUN. ARPT-Use rnwys only. Shoulders rough and soft pending completion of grading opers in spring 1957. (11-18)
**GENERAL MITCHELL FLD (MILWAUKEE)-Lgting of 275' chimney 1.5 mi E, discont. (2-10) Equip. on fld days. Right turn procedure rstd to icly based acft. All acft land according to tetrahedron unless otherwise instructed by twr. All pilots must register in Admin Bldg upon arvl and dptr. Position lgts must be turned on and operating between sunset and sunrise for all flights to and from fld. Ditch extending 150' S of intersection NE/SW, NW/SE rnwys paralleling SE portion NW/SE rnwy for 1/2 mi. E taxiway closed. Obst lgt atop 95' chimney SW corner fld inop. (12-30)
GINNOW ARPT (OMRO)-Use strips only. (1-6)
LA CROSSE ARPT-Use rnwys only. (9-24)
LA CROSSE INT, SITE 23A, CG-TWIN CITIES-CLOSED (snow). (2-17). These data rcvd too late for (R) symbol.
MOREY ARPT (MADISON)-Use strips only. (1-8)
PLATTE ARPT (PLATTEVILLE)-CLOSED (const). (6-12)
RICHLAND CENTER ARPT-Wheel-equipped acft use ctn. (1-2)
SHAWANO ARPT-Use rnwys only. (1-2)
SKY HAVEN ARPT (MILWAUKEE)-Use ctn on S 1/3 portion N/S strip. Stay on strip. (1-3)
SOLON SPRINGS ARPT-Const-unusable. (10-29)
STEVENS POINT ARPT-Use rnwys only. (1-20)
TAYLOR CO. ARPT (MEDFORD)-Avail. in emerg only. Very rough. Maintained for small acft only. (6-6)
TOMAH ARPT-N/S strip under const. (7-9)
TRUAX FLD (MADISON)-Use rnwys only. Grass area 75' wide adj to rnwys rough, bal of grass areas unsafe and rough. Flood lgts and svcg not avail. 2230 to 0730. (2-3)
VETERANS FLD (MENOMONIE)-Rough. (1-2)
WAUKESHA CO. ARPT-Acft turn left after landing and taxi on right side of strip. (12-13)
WINNEBAGO CO. ARPT (OSHKOSH)-Use N/S, E/W rnwys only. (1-8)

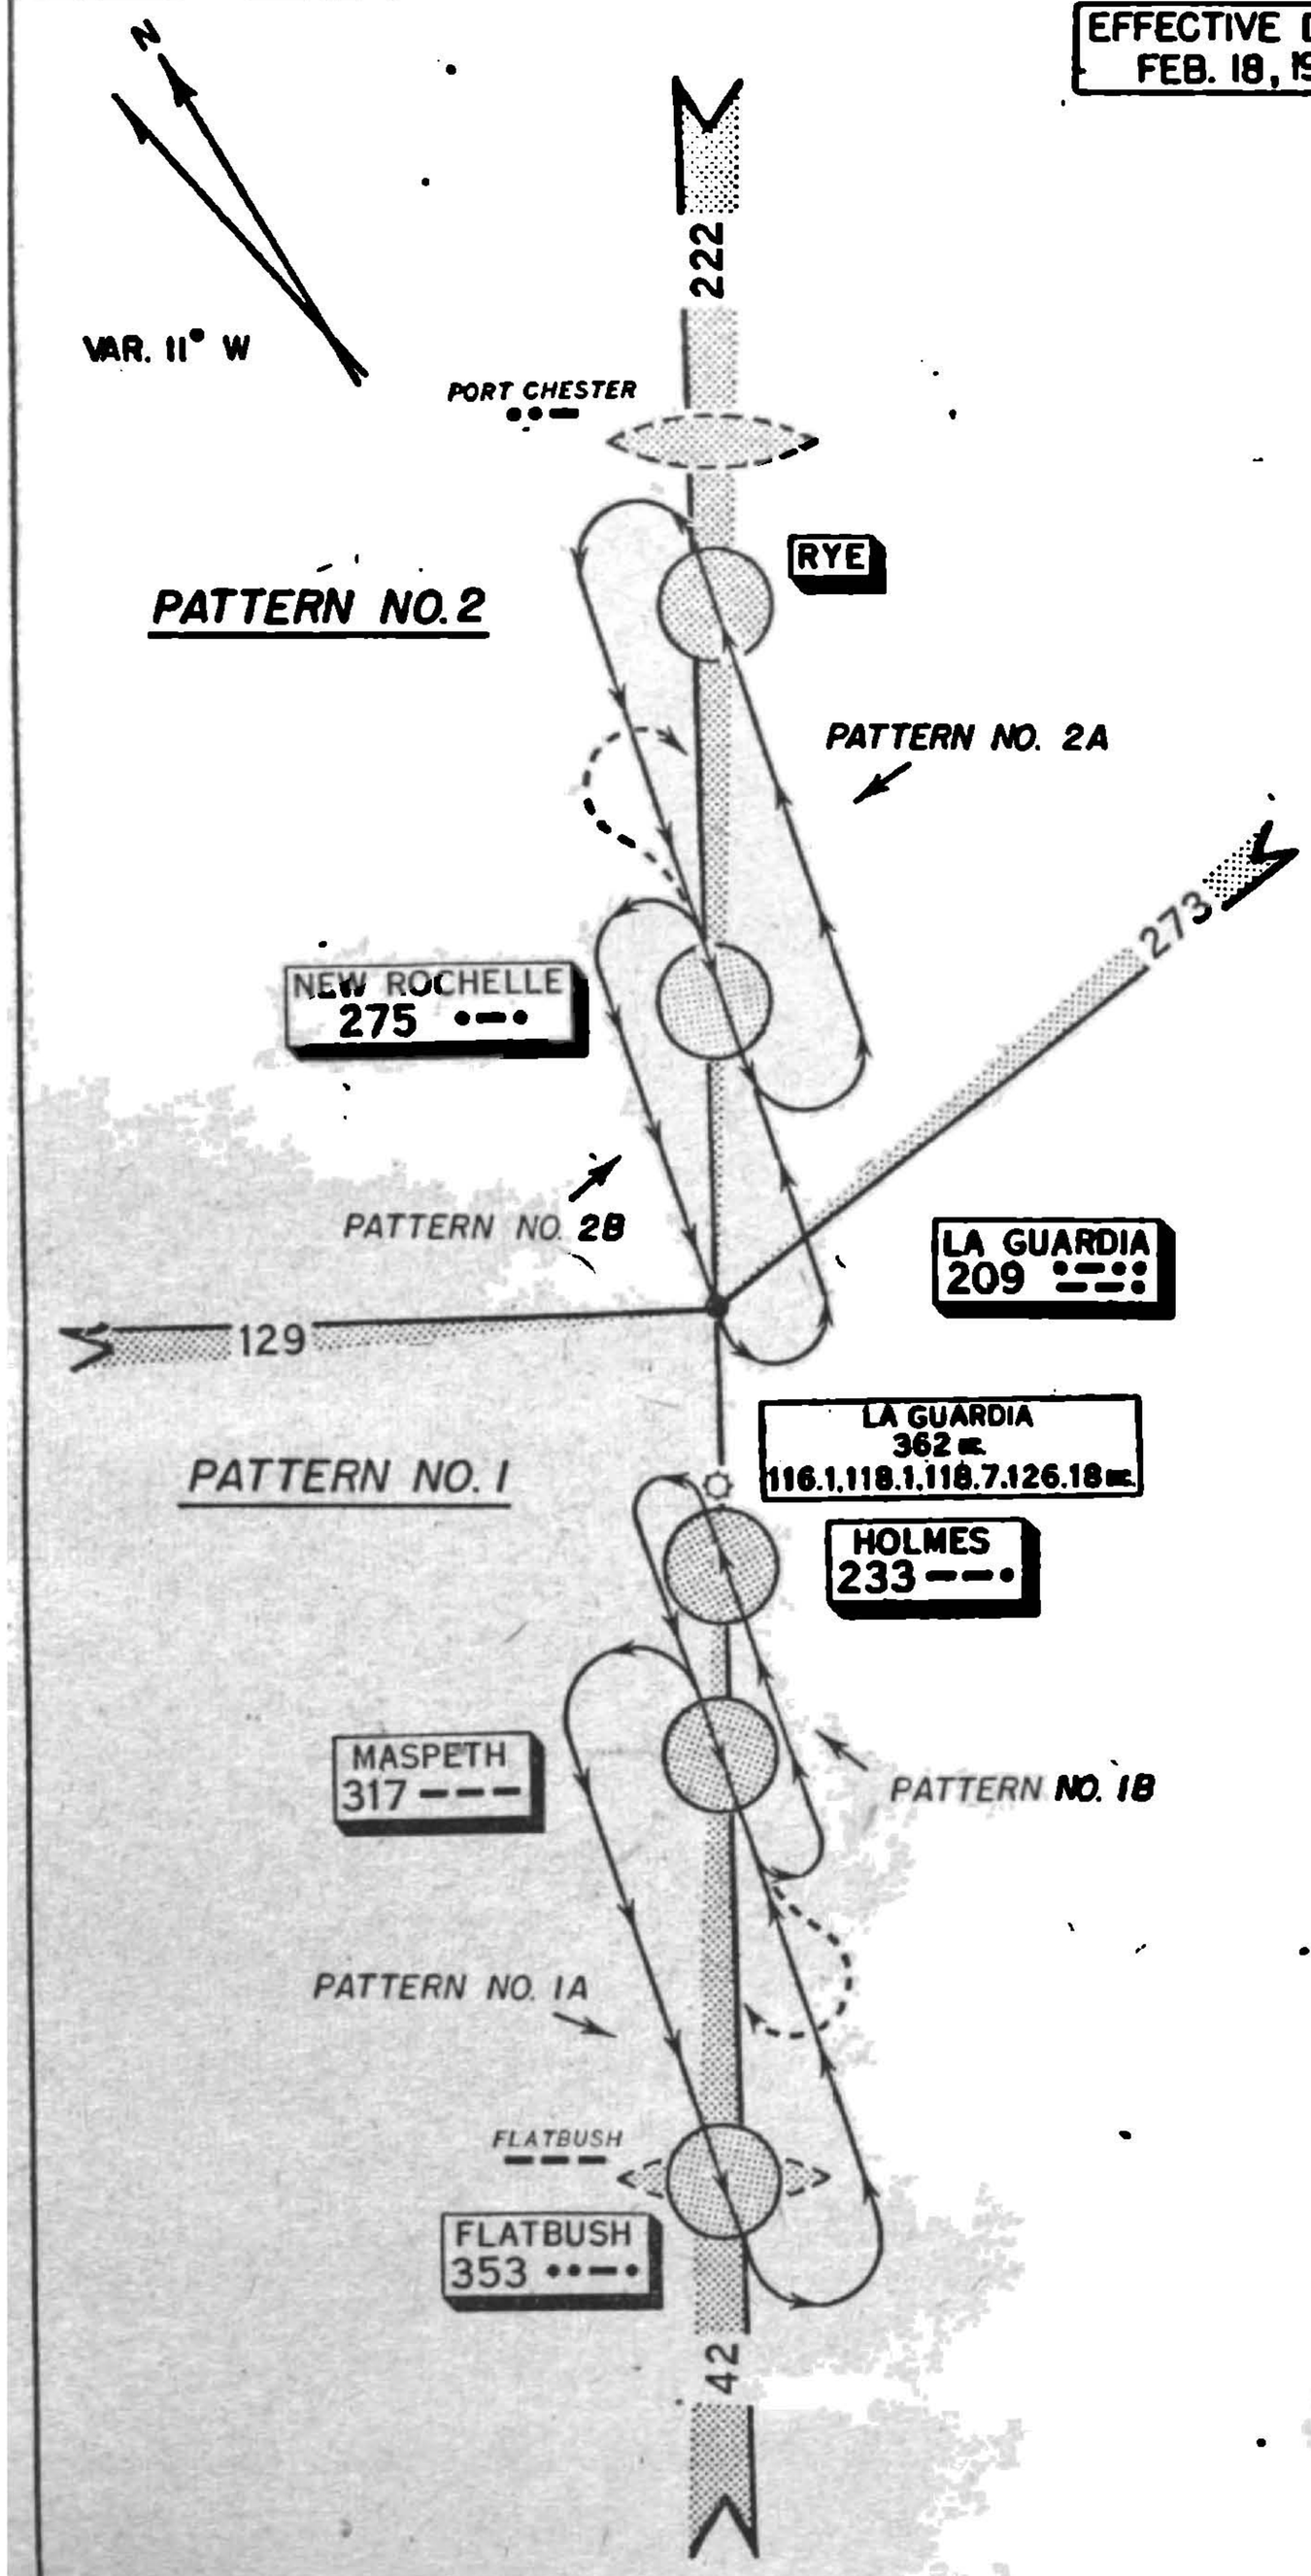
[redacted]

☆CASPER-RADIO: Stn now gds 3105,4495,6210,3117.5 kcs., 116.1,122.1 mcs. (2-14). These data rcvd too late for inclusion on data page.
CASPER AAF-No opers office. (1-29)
CHEYENNE ARPT-Equip. on fld days. Lgtd bldg between E/W rnwy and taxi strip, 1000' from E end. (1-1)
**EVANSTON ARPT, NEW-New fld. Lat 41-16-30, long. 110-57-30. (1-13). See page 24.
FORT BRIDGER, INT, SITE 9, SL-OH-Hazardous to all acft (snow). (2-4)
JACKSON MUN. ARPT-Cattle on fld intermittently. (5-20)
KEMMERER INT,SITE B17, BX-RT-Hazardous to lgt acft (snow). (2-5)
SHERIDAN CO. ARPT-N/S rnwy unsafe heavy acft. Taxi strips parallel all rnwys except N/S rnwy and terminate at ramp. Equip. on fld intermittently. Ctc Sheridan rdo for fld lgts. (2-6)
SUSSEX INT,SITE 22A, CX-GT-CLOSED (snow). (2-4)
WAMSUTTER INT, SITE 22, SL-OH-CLOSED (snow). (2-4)
WARDWELL FLD (CASPER)-Use rnwys, taxi strips only-bal fld rough. 30 million candle pwr ceilometer projector 1000' N of bcn. (10-30)

LA GUARDIA FLD. ADF HOLDING & INSTRUMENT APPROACH PROCEDURES

EFFECTIVE DATE
FEB. 18, 1947

NOTE: THIS CHART IS PRESENTED FOR ILLUSTRATIVE PURPOSES ONLY AND IS NOT TO BE USED FOR NAVIGATION.



ADF HOLDING AND INSTRUMENT APPROACH PROCEDURES FOR LA GUARDIA FIELD, N. Y.

The complete patterns outlined in Holding Pattern #1 will be used for North landings and the #2 Pattern will be used for South landings.

ADF approaches and holding will be in accordance with those procedures shown, normally when the La Guardia ceiling is reported less than 1000'. La Guardia Approach Control, however, will advise in all cases of the type of holding and approaches to be made.

Holding in Patterns 1A and 2A will generally be at the 5500,6500, 7500,8500, and 9500 foot levels. Holding in Patterns 1B and 2B will be at 4500,3500, and 2500 foot levels.

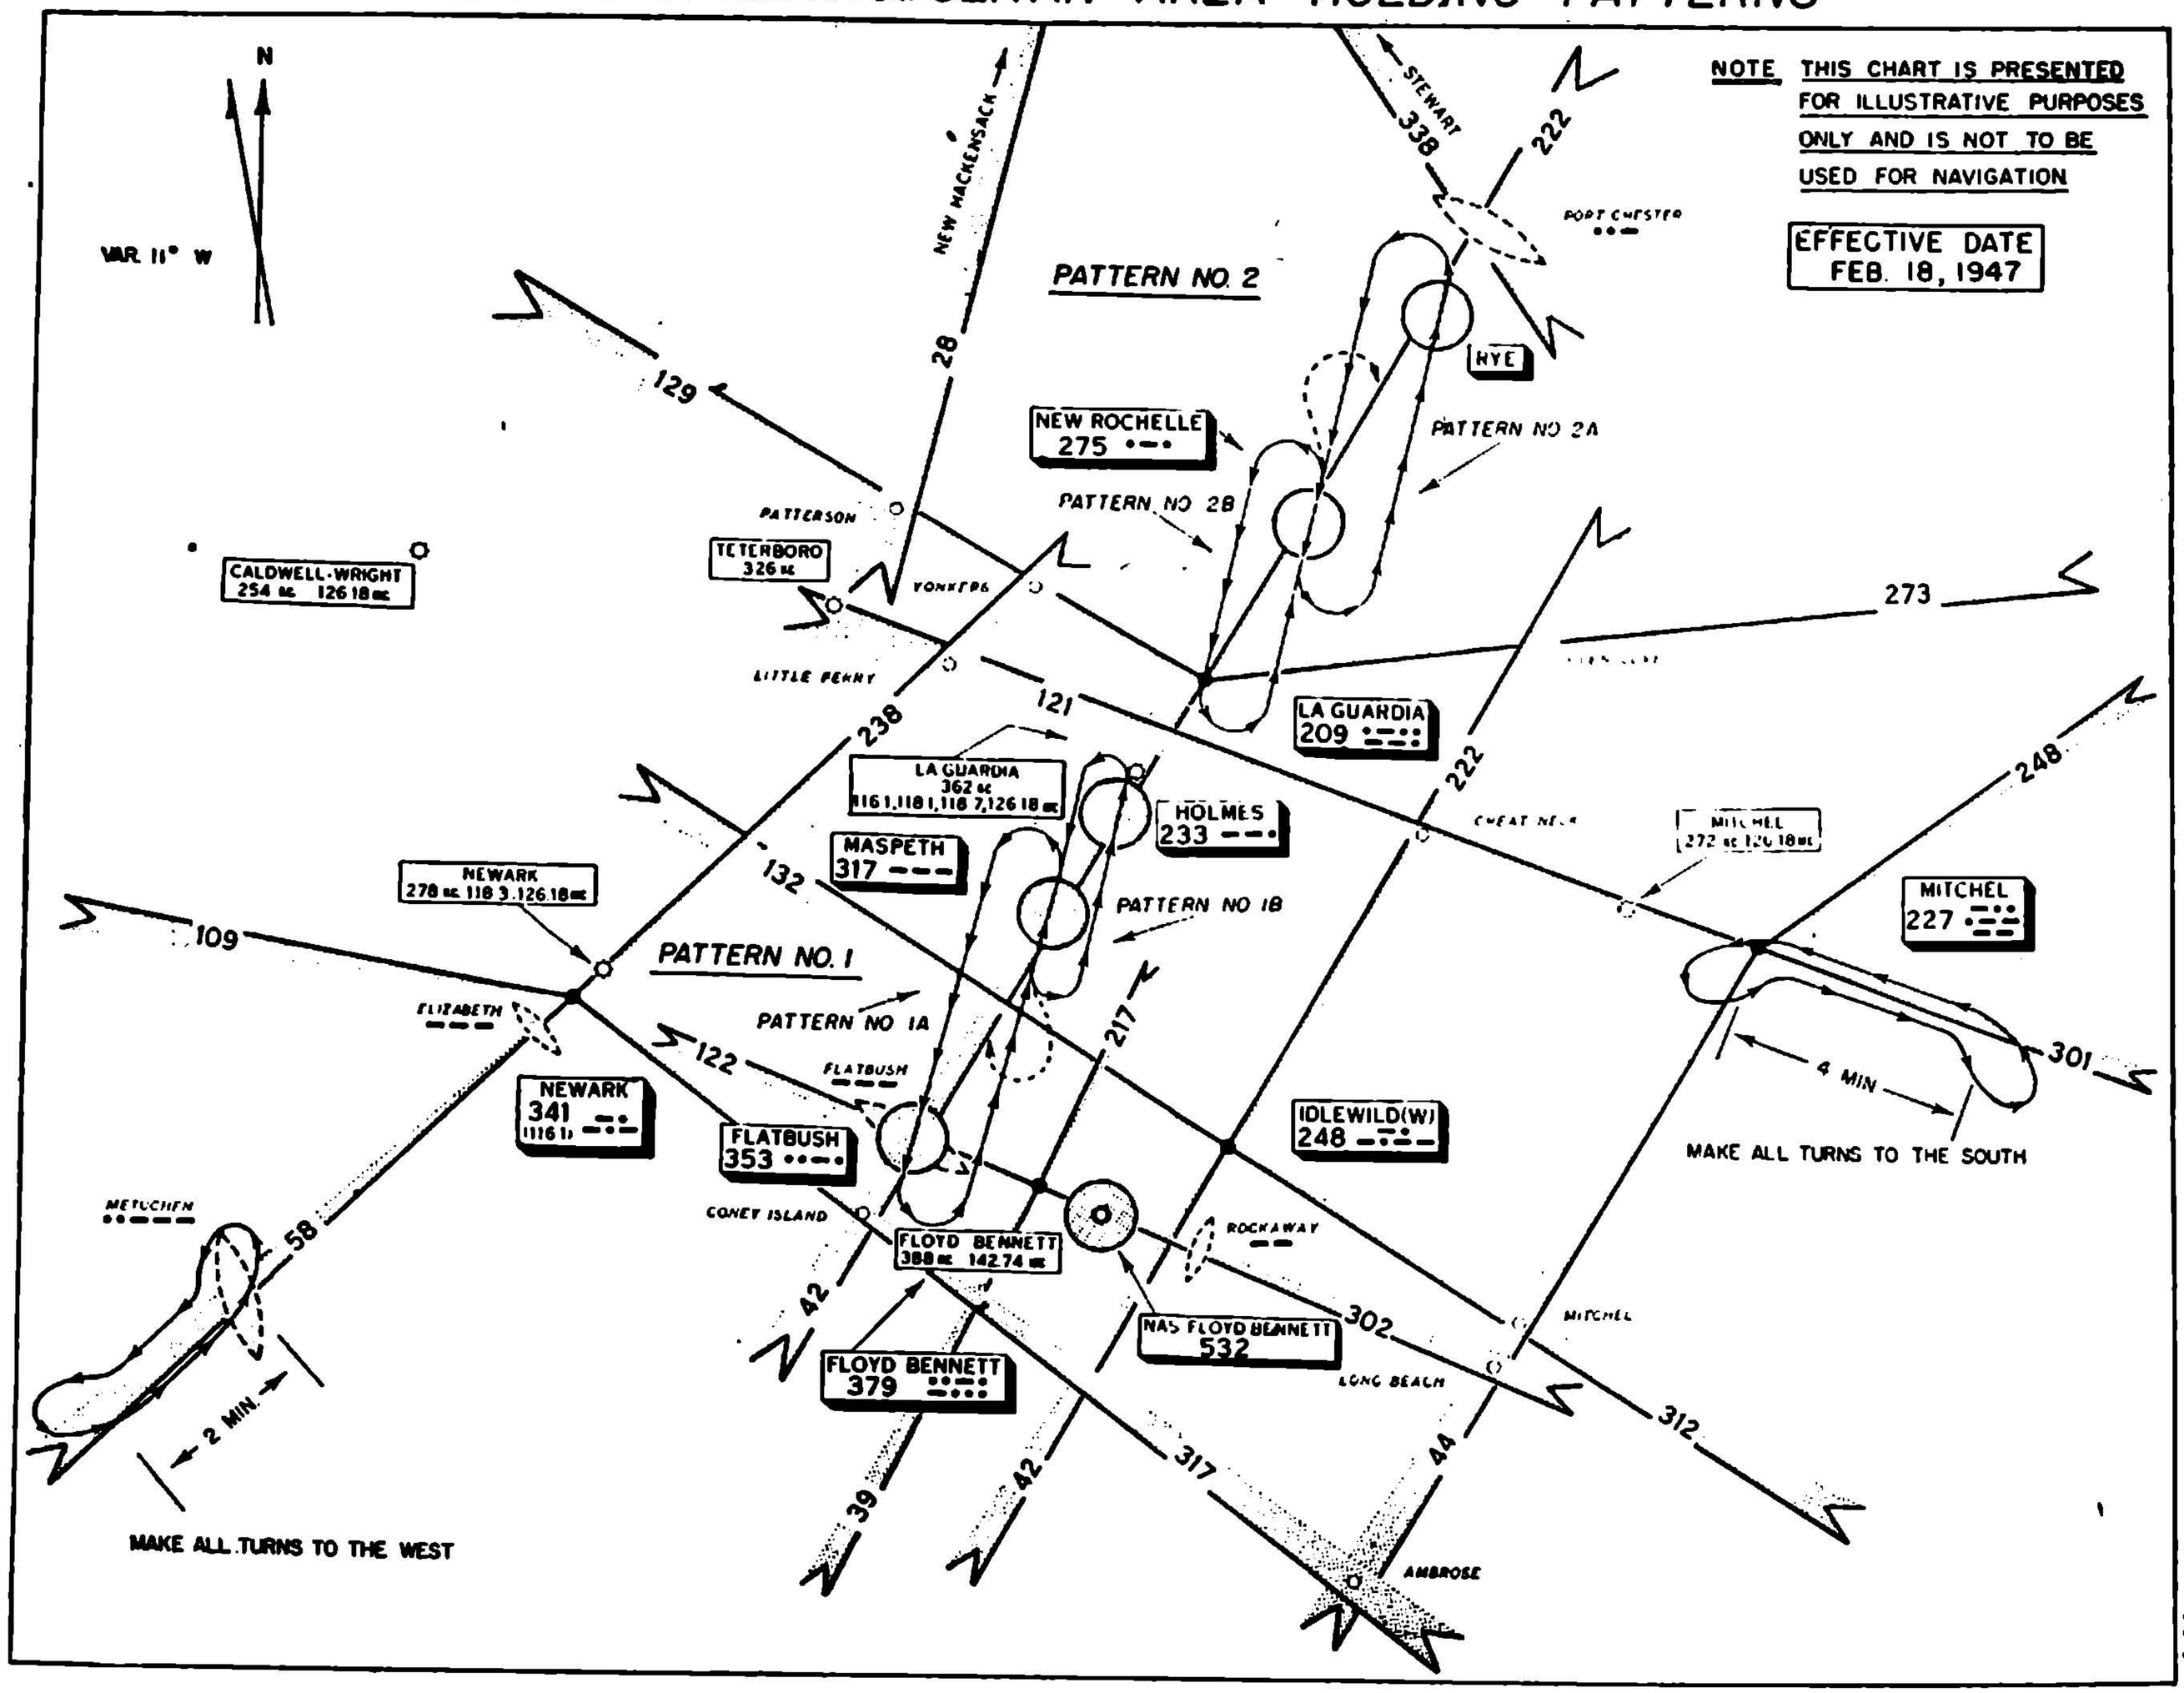
Pilots will be advised when to report over Maspeth or New Rochelle while in Patterns 1B and 2B and will be given a course to steer and advised when right turns to be made for return to the La Guardia radio range courses for final approach to the airport.

Appropriate detailed information concerning these procedures and for the entire New York Metropolitan Area are contained in the New York Airway Traffic Control Center Operations Letter #14, copies may be obtained from:

Chief Controller,
New York Airway Traffic
Control Center
La Guardia Field, N.Y.

Important Note: The Rye, N.Y. locator marker was not commissioned at the time this drawing was prepared. Consult the Airman's Guide for commissioning date, frequency, and identification.

NEW YORK METROPOLITAN AREA HOLDING PATTERNS



SPECIAL NOTICE

In line with majority recommendation, the format of the Guide gradually is being changed so that eventually all of the charts will face their associated data pages. Too, the revised charts will present a horizontal rather than a vertical appearance, that is, their east-west dimension will be greater than their north-south. In this issue only Pages 121 through 137 have been so changed.

Because of numerous requests a further innovation is offered for study. On the aforesaid changed data pages the radio data are not segregated from the airport data as they are on the non-revised data pages. The radio facilities, however, are differentiated from the airport facilities by being CAPITALIZED. Airports, on the other hand, are indented and non-capitalized.

N.B. The re-typing of all the data pages represents a sizeable task of some four months' duration. Accordingly, cognizant of the fact that facilities should be alphabetized according to their charted name, please advise whether you desire the radio data to be segregated, or consolidated with the airport data as they are on the eight new data pages. Since the style of the data pages will be determined solely by majority expressed opinion, your cooperation in advising us of your desires will be sincerely appreciated. Address recommendations to: Aviation Information, Att. A-250, Civil Aeronautics Administration, Dept. of Commerce, Washington 25, D.C.

→ - New or revised data *

RADIO CLASS DESIGNATIONS

AC..... Approach Control Tower, CAA
¤ ..... Scheduled Broadcast Station (broadcasts weather reports at 15 and 45 minutes after the hour unless otherwise cited)
C..... Control Tower, CAA
CA..... Control Tower, Army
CL..... Control Tower (City,County,Private, etc.)
CN..... Control Tower, Navy
D..... Distantly controlled
FM..... VHF fan type marker (100 watts)
FMK..... Compass locator station when combined with fan marker
GCA..... Ground control approach system
H..... Non-directional radio-beacon (homing), power 50 watts or more
ILS..... Instrument Landing System
IM..... VHF boundary marker
K..... Independent compass locator station
LFM..... VHF fan type marker, low powered (5 watts not over 10 miles from range)
MH..... Non-directional radio-beacon (homing), power less than 50 watts
ML..... Range (loop radiators), power less than 50 watts
MM..... VHF middle marker
MMK..... Compass locator station when combined with middle marker of Instrument Landing System
MRA..... Range (adcock, vertical radiators),power more than 50 less than 150 watts
MRL..... Range (loop radiators), power more than 50 less than 150 watts
OM..... VHF outer marker
OMK..... Compass locator when installed at outer marker site or within 6.5 miles of middle marker
P..... Point to point radio
RA..... Range (adcock, vertical radiators),power 150 watts or more
RL..... Range (loop radiators),power 150 watts or more
S..... Simultaneous (range signals and voice) type of transmitter
T..... Teletype
TX..... Principal teletype
V..... Voice communication with aircraft
VAR..... Visual-aural VHF range
W..... Without voice facilities
Z..... VHF station location marker at a range station

N.B. Variation is computed at the station. The distance from station to field is computed from the center of the range station to the nearest edge of the usable area of the airport. The bearing is that from the range station to airport or fan marker.

AIRWAY RADIO COMMUNICATIONS

GENERAL

All radio range stations (class RA, RL, MRA, MRL, ML) emit directional signals (type A2 emission) 1020 cycles per second modulation.

All radiobeacon stations (class H and MH) emit non-directional signals (type A2 emission) 1020 cycles per second modulation. Unless otherwise noted, all stations, other than class MH, operate continuously within their assigned hours of service except during interruptions for voice transmission on the same frequencies where simultaneous transmission is not available and during shutdowns for maintenance purposes. Class MH stations operate on request unless otherwise cited. The effective range of an MH facility is ordinarily 25 miles.

Compass locators are low-powered non-directional facilities operating in the 200-415 kc. band. They are installed near airports to make it easier for pilots to make instrument approaches. When holding is required, they also help the pilot follow a more precise holding pattern. Compass locators, however, should not be depended upon as long range navigational aids since they are rarely useful at distances of over 15 or 20 miles.

Voice communications facilities are available unless "W" (without voice) is included in the classification. Examples: SMRAW, MRLW, HW, HWT. Transmission of voice on a frequency other than the range frequency is indicated as MRLW-V. When no "W" is included in station class, the "V" indicates voice feature on two frequencies, namely, range frequency, and generally, VHF of 116.1 and/or 111.1 mcs. 116.1 mcs. is used for transmission to Army aircraft, 111.1 mcs. to civil aircraft.

The classification designation "B" denotes that the station broadcasts airway and meteorological information on a scheduled basis at 15 and 45 minutes past each hour unless otherwise cited.

All Civil Aeronautics Administration stations equipped for voice communications with aircraft stand continuous listening watches on the frequencies of 3105, 4495, and 6210 kcs., unless otherwise cited.

* AT THE BOTTOM OF THE LAST COLUMN, UNDER THE HEADING OF NEW RADIO FACILITIES, BORDERED BY TINTED LINE WILL BE FOUND, OUT OF ALPHABETICAL ALIGNMENT, ALL THE NEW RADIO FACILITIES TABULATED AFTER THE TYPE FOR THAT PAGE HAD BEEN ORIGINALLY SET UP.

N.B. For Digest of A.T.C. and Communications Procedures.
see FLIGHT INFORMATION MANUAL

AIRPORT DATA

LEGEND

NAME

(When city and airport names are identical, the airport name is omitted in the interest of space-conservation)

(A) Airport owned or leased in whole or in part by Army
(CG) Airport owned or leased in whole or in part by Coast Guard
(N) Airport owned or leased in whole or in part by Navy
Ⱡ CAA Intermediate Field
(P) Non-military airport available for use by military aircraft (See Note 3)

N.B. If the airport name is followed by (A) for Army, (N) for Navy, or (CG) for Coast Guard, the field is exclusively an Army, Navy, or Coast Guard field. If the field is not exclusively Army, Navy, or Coast Guard and may be used by civilians, no (A), (N) or (CG) follows the airport name.

CLASS

SIZE

40: Length of longest landing strip (unpaved) in hundreds of feet
40h: Length of longest hard-surfaced runway in hundreds of feet (Seaplane landing areas over 5 miles in length are classified as unlimited and indicated as "unl").

N.B. Only the length of the longest runway is cited, and its direction is not indicated. Space restrictions occasioned this policy, but logic justified it. The logical assumption may be made that runways have been laid out in accordance with the local wind rose. Therefore, in all calms, or gentle-angling winds, or winds aligned with the longest runway, the longest runway will be used. When a wind not aligned with the longest runway is of such intensity that the longest runway cannot be used, this wind makes the use of runway aligned with the wind, even though much shorter than the longest runway, sufficiently long from a safety viewpoint. Too, prior knowledge that there is, for example, a NW/SE runway is of little value to a pilot if, when he arrives over the field the wind is blowing too strongly from another direction to use that runway. Finally, the larger the number indicating the longest runway length, the greater is the assurance of a sufficient number of runways for all-wind coverage.

RADIO

R1: Voice availability via tower, range (or homing device), or voice station
R2: Range (or homing device) and tower
R3: Range (or homing device), tower, and instrument landing system

LIGHTS

L: Incomplete lighting, either flood or portable runway lights
L1: Beacon only
L2: Beacon and boundary
L3: Beacon, boundary, and obstruction
L4: Beacon, boundary, obstruction, and flood
L5: Beacon, boundary, obstruction, flood, and runway contact
(L5): Identical to L5 except that runway contact lights are high intensity
L6: Beacon, boundary, obstruction, flood, runway contact, and instrument approach
(L6): Identical to L6 except that instrument approach lights are high intensity

(The class always indicates the highest element available but does not necessarily include all intermediate elements)

SERVICING

S1: Fuel
S2: Fuel, storage
S3: Fuel, storage, minor aircraft repairs
S4: Fuel, storage, minor aircraft, and minor engine repairs
S5: Fuel, storage, major aircraft, and minor engine repairs
S6: Fuel, storage, major aircraft, and major engine repairs

N.B. Very often small civilian fields (particularly in non-metropolitan areas) will have no full-time attendant. Frequently, servicing at such fields is isolated communities is available only by circling the town to attract the operator's attention.
These fields are often recognizable by airport class, comparable to, for example, "1S S1". "1S S1" suggests that the field is not too large, and that the field may not have a full-time attendant even though fuel is stored there. Lack of radio or lighting facilities, indicated by the absence of an "R" or "L" in the airport class, is a further indication that a full-time attendant may not be available. Absence of an "S" (servicing) indicates definitely that fuel, if available at all, is available only by truck from town. Any field carrying no indication of radio (R), lights (L), or servicing (S) in airport class column should be used with caution, especially a field of the small category. Fields of this nature may be inactive or not maintained, and thus dangerous for use.

NOTES

1. "(NC)" not charted. Indicates not charted because of insufficient data or inability to verify
2. → New or revised data. ✱
3. "(P)" in CITY-AIRPORT NAME column indicates: (1) those municipal airports improved with public funds and covered by an ag agreement between the municipality and the U.S. Government permitting government planes to use such fields in common with others and without charge, to the extent possible without restriction of non-military operations or (2) other civil airports for which legal permits covering their limited use by military aircraft have been procured and filed with the real estate agency of the War Department.
4. "Effingham Int., 10, L3-ID" in CITY-AIRPORT NAME column indicates that the airport is Effingham CAA Intermediate Field, Site 10, on the St. Louis-Indianapolis Airway. Municipal airports where the lights are maintained by the CAA are listed similarly except that there is no prefixed star or "Int.".
5. In Location column, the word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.
6. In Remarks column:
   (a) "91 oct.", indicates fuel octanes available. "Army", or "Navy" following octane indicates Army or Navy contract fuel available.
   (b) "CLOSED" indicates closed to all civil aircraft and all transient military aircraft except on official business this station or in emergency.
   (c) "Port. B-2 lights" indicates cone-mounted lights outlining runways. These lights are portable and may be shifted from runway to runway.
   (d) "TEMP INACTIVE. NO FACS." indicates AAF airfields used either exclusively by the AAF or municipal airfields used jointly by the AAF and civil interests at which both the Army and the civil interests are inactive. Such airfields will be available to military aircraft at the discretion of the Commanding Officer of the organization to which the aircraft is assigned (See Special Notice).
   (e) "ARMY TEMP INACTIVE. CIVIL FACS." indicates municipal airfields used jointly by the AAF and civil interests at which the Army facilities are inactive but civil facilities are available. Such fields may be used by military aircraft, however, only commercial service is available.
   (f) "PRIVATE" indicates field is available for owner only, and not to be used by others except in emergency.
   (g) OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, clearly discernible for contact operations, are frequently omitted, for example. On the other hand, all pole lines are cited.
   (h) "Fld lgts on prior req." indicates field lights are available only by previous phone call, telegram, or letter. It must be remembered that most fields do not have 24-hour operation. Accordingly, the field lights, indicated for such a lighted field (and, in some instances, even the rotating beacons) are available only by prior request. When an airport classification indicates a lighted field, and there is no notation in the REMARKS column, the field lights burn all night or will be turned on when a radio request is made or a plane circles the field.
   (i) "FEE" indicates landing fee for private aircraft
7. Airline stop airport names are capitalized.

FLIGHT PLANNING CHARTS

LEGEND

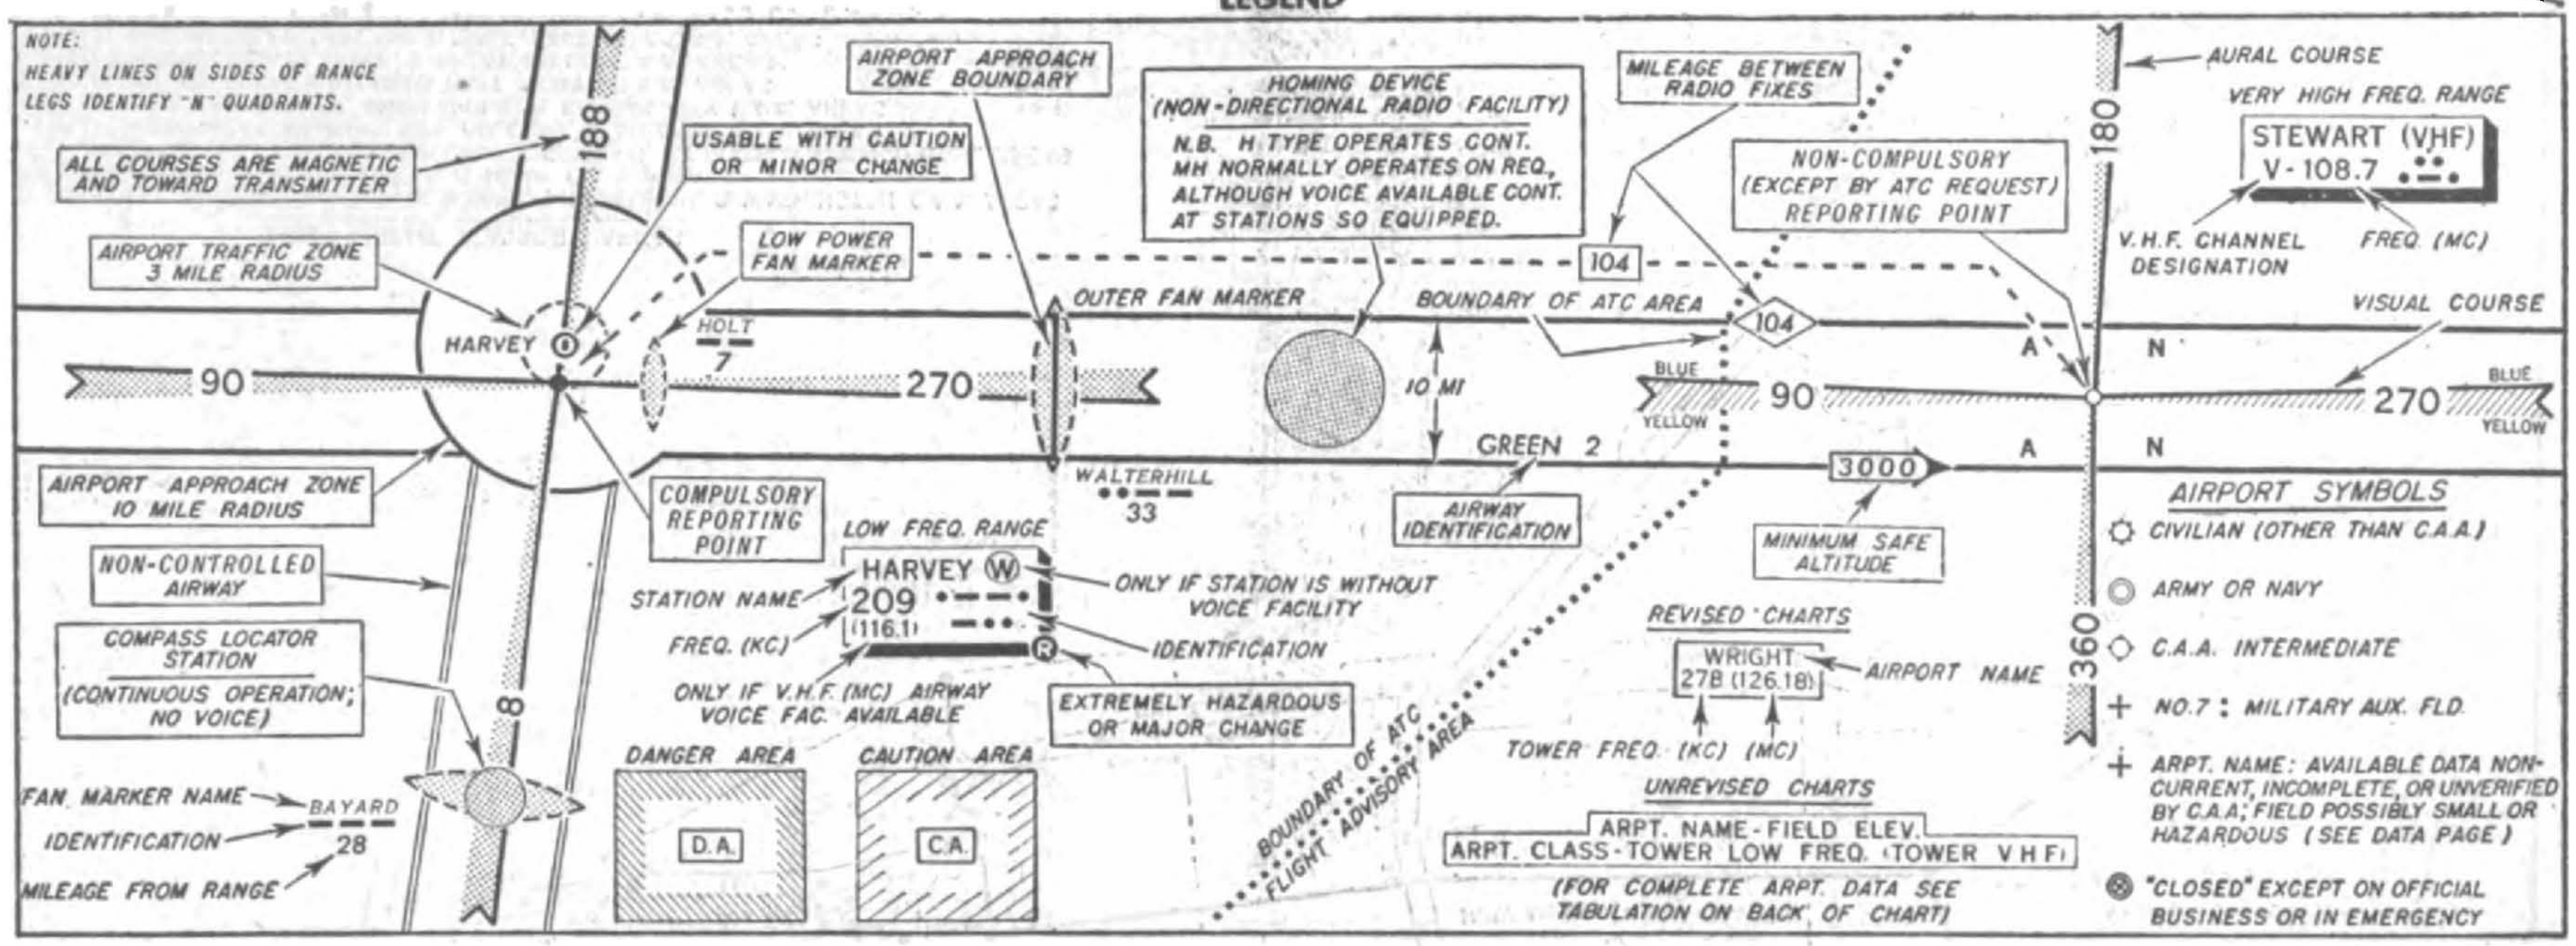

CHART CONTENTS

The Flight Planning Charts, in addition to the warning (R) and caution (O) symbols, indicate: (1) all aeronautical radio facilities except air carrier stations; (2) all minimum safe altitudes and fix mileages: (3) all Army and Navy fields and CAA intermediate fields, and all active civilian airports; (4) all danger and caution areas; (5) all designated airways. These charts indicate all facilities, and the current status thereof, on record with the CAA as of 0001 E.S.T. each alternate Tuesday.

CHART PURPOSE AND USE

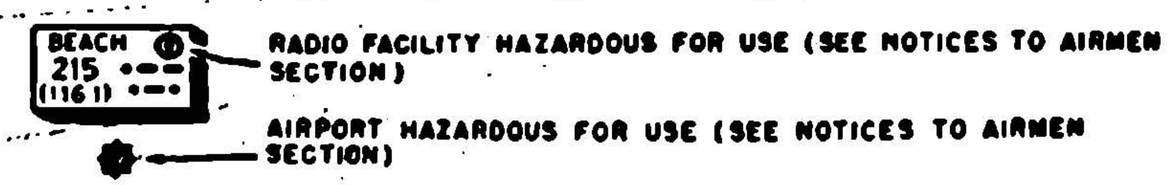
The primary purpose of these charts is to facilitate the planning and execution of cross-country flights. The user should check the charts for the symboled (R) or (O) items between his point of departure and his destination. If there is none, there is no necessity for him to read the Notices to Airmen section as far as temporary items are concerned. As for permanent changes - all major ones, such as new field, abandoned fields, range frequency changes, etc., are currently reflected on the charts For record-keeping purposes and for the correction of charts and publications, however, the Notices to Airmen section should be carefully read.

VHF CHANNEL LETTER DESIGNATORS

Channel letter designators are being shown on the Flight Planning Charts herein only as an aid to pilots in their use of unmodified military equipment. It is emphasized that not all very-high frequencies now in use have channel letter designators. Standardization of air-borne equipment in this respect has not been effected, nor is it expected to be along the lines of one-letter designators because of the large number of frequencies which eventually will be in use.

CHART HAZARD SYMBOLS

The current status of facilities and hazards as reported to the CAA is indicated by the symbol system. An airport closed because of construction, an inoperative range, a revised range quadrant identification or range frequency, or course realignment of 20° or more, for example, are indicated by the symbol (R) for red, or warning. An airport under construction but usable, or an inoperative control tower, on the other hand, is indicated by the symbol (O) for orange, or caution.



RANGE COURSE LENGTHS

In general, the length of radio range courses shown herein indicates the approximate location where it is expected that a pilot will tune from one radio range to the next one along his route of flight. Such change-over points, however, are not mandatory, and it is expected that a pilot will use his best judgment in selecting change-over points that will best serve his needs.

Warning

Radio range courses are subject to disturbances that result in multiple courses, and signal fades and surges over rough country. Pilots flying over unfamiliar routes are cautioned to be on the alert to detect these vagaries, particularly over mountainous terrain.

✓ CAUTION- MANY SEAPLANE LANDING AREAS IN THE NORTH ARE CLOSED DURING WINTER MONTHS BECAUSE OF ICE.

OPERATION OF SEAPLANES ON THE NEW YORK STATE CANAL SYSTEM:

AN OFFICIAL COMPLAINT HAS BEEN RECEIVED FROM THE STATE OF NEW YORK, DEPARTMENT OF PUBLIC WORKS, THAT THE NEW YORK STATE CANAL CHANNEL IS BEING USED FOR THE TAKING OFF AND LANDING OF AIRCRAFT. THIS CHANNEL IS VERY NARROW AND HAS NUMEROUS CURVES. AIRCRAFT LANDINGS AND TAKE-OFFS ON THIS CHANNEL, THEREFORE, ARE DANGEROUS AND PRESENT A HAZARD TO CANAL TRAFFIC AND SMALL BOATS. ALL AIRMEN ARE CAUTIONED THAT SUCH ACTIVITIES MAY CONSTITUTE CARELESS OR RECKLESS OPERATION OF AIRCRAFT.

NOTICES TO AIRMEN

INTRODUCTION

PROCEDURAL STATEMENT: The "Airman's Guide" no longer has a separate section for the DIRECTORY OF AIRPORT or the AIR NAVIGATION RADIO AIDS. These two sections are now inserted as data pages between the flight planning charts. To retain the two-page chart flow, however, the data pages are found on the reverse sides of the charts rather than facing them. On the data pages are tabulated all the data covering the facilities charts on the reverse sides and formerly found in the DIRECTORY OF AIRPORTS and AIR NAVIGATION RADIO AIDS sections.

To facilitate reference to a particular facility, an Index of Facility Locations with the parenthetical number of the page on which the locale is charted has been added to the revised AIRMAN'S GUIDE, e.g., Chicago (139). On the back of page 139 will be found the Air Navigation Radio Aids and the Directory of Airports data covering Chicago.

Because of the serious paper shortage every means of reducing the Airman's Guide bulk has been investigated. Codification and considerable abbreviation are already being utilized. No material may be deleted, however, in this paper conservation program because surveys have revealed that subscribers consider all parts of the Guide essential. Consequently, about the ultimate step in this bulk-reduction direction has just been taken. The data pages backing the charts now serve, where possible, as notam pages. Resultantly, most of the new data formerly notamized in the Notices to Airmen section with prefixed large stars or double asterisks are no longer carried in that section. Only commissionings, abandonments, or changes so potentially hazardous that they are indicated with Ⓡ (for red flag) symbols on the charts, are now cited in the Notices to Airmen section

Notamizing on the charts is effected by use of the super-imposed Ⓡ and Ⓒ symbols. The Ⓡ (for red flag) indicates a very hazardous condition or a major change. The Ⓞ symbol (for orange flag) indicates a minor change or hazardous condition with the facility still usable with caution. The pertinent details to which these symbols refer will be found listed in the Notices to Airmen section under the facility name (and state) by which they are charted.

Notamizing on the data pages is effected by the use of prefixed arrows as in the former Air Navigation Radio Aids publication. All changes from the previous issue, whether cited in the Notices to Airmen section, or not, are indicated by the prefixed arrows. Following are examples of changes notamized only on the data pages: field obstruction, servicing, elevation, location, and runway length changes. Because of the use of the prefixed arrows as new data indicators, a further innovation had to be adopted. This is a tinted horizontal line following the last tabulated facility and titled either New Radio Facilities or New Airports.

Space below the tinted horizontal lines on the data pages has been reserved as a supplement for new radio aids and airports whose data were received after the data pages were originally typed. Revisions to existing airports and radio aids are super-imposed on the old data, but new airports and radio aids are listed, necessarily out of alphabetical alignment, below the tinted horizontal lines until the page is re-typed.

In summation: (a) On the data pages backing the charts, new data or revisions are indicated by arrows; (b) in the Notices to Airmen, citations covering new or revised radio data are prefixed by one large star "★". Citations covering new or revised airport, or miscellaneous data, are prefixed by two asterisks "**".

All temporary conditions (field soft, runway under construction, range course out of alignment, etc.) are cited in full until they are no longer in effect. When a citation carries a permanent item and a temporary item, the permanent item is underlined. Parenthetical date at end of item indicates time item was reported.

To conform to chart practice, all facility data are listed in the Notices to Airmen section and on data pages alphabetically by states and by facility name. Thus, an airport will be found listed alphabetically under its own name rather than under its locale's name. If the airport or radio facility name is other than that of the city in which it is located, the location is shown in parenthesis after the facility name.

SPECIAL NOTICES

CIVIL FACILITY DATA: Please advise immediately the Office of Aviation Information, Attention A-250, C.A.A., Department of Commerce, Washington 25, D.C., whenever temporary conditions covering civil airports or navigational aids begin or terminate, data revisions are effected, or flight hazards are erected or removed.

ARMY DATA: Advice covering Air Forces Fields or Air Forces Operations on civil fields, or AAF Radio Facilities, and Danger or Caution Area activation, as well as requests for approval for the closing of any Army airfields to transient military aircraft for a period in excess of 10 days should be directed to: COMMANDING GENERAL, AIR TRANSPORT COMMAND, WASHINGTON 25, D.C. ATTENTION: HEADQUARTERS FLIGHT SERVICE, FLIGHT OPERATIONS. Information to be published will be coordinated and submitted to the C.A.A.

NAVY FACILITY DATA: In accordance with Hydrographic Office Memorandum for Aviators No. 9, July 29, 1946, Hydrographic Office information concerning naval and marine corps air stations and facilities, including changes in field facilities, operation rules, air/ground communications facilities, instrument approach procedures and navigational aids, should be directed to: The Division of Air Navigation, Hydrographic Office, Washington 25, D.C., for transmittal to the C.A.A. In accordance with Aviation Circular Letter No. 95-45 of June 13, 1946, approval for the closing of any naval or marine corps air station or facility to transient military aircraft for a period in excess of 10 days must be obtained from the Chief of Naval Operations. Also, approval is to be obtained from the Chief of Naval Operations before relocation or modification of any aid to air navigation, such as recrientation of radio ranges.

USE OF AIRPORTS BY MILITARY AIRCRAFT: (1) AAF Regulation 95-2. The attention of Army clearance personnel and of Army pilots is invited to the provisions of Section III, AAF Regulation 95-2 and AAF Regulation 95-2A, which state in part: "The use by Army aircraft of civil airports which have not been leased, purchased, or where AP-4 or similar landing rights agreements have not been negotiated by the Federal Government, is not authorized except in case of emergency or in case of official business. Each instance of flights in AAF aircraft for official business will be covered by competent air force, major AAF command, or higher authority orders. Each instance of flights for official business in organic aircraft of the Army Ground Forces will be covered by written orders of the commander of the unit to which the aircraft is assigned. These written orders must designate the field of intended landing. Unauthorized use of such airports is a substantiating factor in claims for damage with accompanying requests to the Government to bear maintenance and repair costs or to provide Government equipment at such civil airports. Notation will be made by clearing authorities in Remarks Section of AAF Form 23 that competent authority authorized use of such fields and will be transmitted in Remarks Section of the flight plan as "authorized flight"

All landings by military aircraft without competent written orders on inactive, temporarily inactive Army airfields and civilian airports, except in case of emergency, will be limited to the ones identified by letters 'A, N, or P' in the Airman's Guide. It is the responsibility of the various air forces, major AAF commands and certain field activities under the direct control of the Commanding General, AAF, to prevent unauthorized use of airfields and airports as outlined in this Regulation".

(2) "Official Business", within the meaning of AAF Regulation 95-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units or organizations at or near the airfield selected for landing for the purpose of conducting transactions

✓ Indicates new or revised Special Notice

in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service or other items attendant with itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

(3) Policy on Army Use of Temporarily Inactive Army Airfields. (a) Municipal airfields which have been used jointly by the Army Air Forces and civil interests and at which Army facilities are temporarily inactive but the civil facilities are still active, may continue to be used by military aircraft. No servicing other than that provided by commercial concerns will be available. Such airfields will be identified herein by the following notice: "Army temp inactive - civil facs". (b) Temporarily inactive Army airfields used exclusively by the Army Air Forces (either owned or leased) or municipal airfields used jointly by the Army Air Forces with civil interests at which both Army and civil facilities are inactive will be available to military aircraft at the discretion of the commanding officer of the organization to which the aircraft is assigned. Such airfields will be identified herein by the following notice: "Temp inactive-no facs." Above policy statement is not to be construed as countermanding any AAF regulations or letters governing command use of municipal airports or Army airfields.

(4) "CLOSED" Army Airfields. Certain airfields under the jurisdiction in whole or in part of the Army Air Forces will be listed from time to time as "CLOSED" under the provisions of AAF Regulation 60-23 or under specific direction of the CG, AAF. Such airfields will be used on official business only under written orders in each case.

CHANGES IN LISTING PROCEDURE FOR ARMY AIR FORCE AIRFIELDS: In an effort to simplify the use of the Airman's Guide within the printing limitations imposed by the Government Printing Office, notices on Army airfields that are closed or temporarily inactive or surplus to Army Air Forces will be carried in the Directory of Airports section thereby eliminating the necessity for checking in more than one section to obtain the correct status of an airport. Minor restrictions such as hours of operation, service, and hazards will continue to be listed in the Notices to Airmen Section. The following procedure is now in effect:

(a) The term "CLOSED" will be shown in Directory Section only, for all AAF airfields that are closed to all transient traffic except on official business or in emergency. The legend page of the Directory will give such a definition for "CLOSED". Airports that have been declared surplus to the AAF and on which permits have not been issued for civil use or which have not been otherwise disposed of by the W.A.A. will also be listed as "CLOSED".

(b) AAF airfields that now carry notices of "Army temp inactive-civil facs" or "Temp inactive. No facs (See Special Notice re use)" will now have such citations carried in the Directory Section only.

MILITARY AND NAVAL LANDINGS IN NEWFOUNDLAND: All military and naval aircraft landing in Newfoundland should use Harmon Field at Stephenville or Naval Operating Base at Argentia. Gander has very limited military facilities and is reserved for commercial and weather diverted military aircraft.

RESTRICTIONS ON AAF HELICOPTERS: YR-5A, R-5A, YR-5D, R-5D (except as indicated below*) and YR-5E helicopters may be released for flight only upon compliance with T.O. 01-230 HB-13 and -14.

*R-5D helicopters No. 43-46643 and subsequent have been modified by the contractor and may be released for flights.

ARMY FOREIGN CLEARING STATIONS: Under the authority of AAF Regulation 61-4 Army aircraft with destinations listed as follows or returning therefrom to the United States will clear through the stations indicated: AFRICA - Morrison Field, Fla.; Washington National Airport, D.C.; or Westover Field, Mass. ALASKA - McChord Field, Wash.; or Great Falls AAF, Mont. BERMUDA - Mitchel Field, N. Y.; Morrison Field, Fla.; Washington National Airport, D.C.; or Westover Field, Mass. CANADA - Great Falls AAF, Mont.; McChord Field, Wash.; Washington National Airport, D.C.; Selfridge Field, Mich.; or Westover Field, Mass. CANAL ZONE, CENTRAL AMERICA, MEXICO, AND SOUTH AMERICA - March Field, Calif.; Kelly Field, Tex.; or Morrison Field, Fla. CARIBBEAN-Morrison Fld, Fla., & Kelly Fld, Tex.; ENGLAND, GREENLAND, NOVA SCOTIA, ICELAND, NEWFOUNDLAND, NO. IRELAND- Washington National Airport, D.C., and Westover Field, Mass. (Note: Selfridge Field also will clear for Nova Scotia and Newfoundland). HAWAII - Fairfield-Suisun AAF, Calif.

✓ OPERATING PROCEDURE WITH FLIGHT SERVICE UNDER AAF MILITARY FLIGHT SERVICE COMMUNICATIONS SYSTEM (PLAN 62): (1) Departure from AAF Bases. No change. Reference: AAF Regulations 15-23 and 60-22. (2) Departure from non-AAF Bases. AAF aircraft departing from non-AAF bases will file a complete flight plan with, and secure approval from the nearest Flight Service Center prior to takeoff, or as outlined in AAF Regulation 60-22. Communications with a Flight Service Center may be established by direct telephone to the center; or by a radio call to the nearest AAF Base or AACS Airways radio station. In addition to the Flight Service clearance, pilots contemplating flight under Instrument Flight Rule conditions will secure a CAA Airway Traffic Control clearance. The CAA clearance normally can be obtained more rapidly by contacting CAA directly through CAA Communications facilities. If CAA Communications facilities are not available, however, the CAA clearance may be obtained through Flight Service. (3) Change of Contact Flight Rule (CFR) Flight Plan Enroute. AAF aircraft requiring a change of route or point of first intended landing of a CFR flight plan enroute will contact Flight Service through an AACS Airway radio station or control tower, submit the information required by AAF Regulation 60-22 and, when necessary, secure Flight Service approval. (4) Change of Instrument Flight Rule (IFR) Flight Plan, or CFR to IFR, or IFR to CFR enroute. AAF aircraft requiring a change of route, altitude, point to first intended landing, cruising speed or alternate airport, or change from CFR to IFR or IFR to CFR enroute, will contact a CAA communications station for coordination and approval by CAA Airway Traffic Control and Flight Service. If communications with CAA communications station cannot be established, AACS Airways radio station will be contacted for coordination and approval by CAA Airway Traffic Control and Flight Service. (5) CFR Position Reports. When flying under CFR conditions, pilots will make position reports, wherever practicable, to AACS Airway radio stations enroute and receive any necessary advisories from Flight Service. (6) IFR Position Reports. When flying under IFR conditions, pilots will first make position reports to CAA communication stations as heretofore required, and will then make position reports to AACS Airways radio stations in order that the responsible Flight Service Center may furnish any necessary advisories. (7) Voice Calls. AACS Airways radio stations will be called by the location name followed by the word "airways", such as "Bolling Airways" This is distinct from the CAA radio call system which uses the location name followed by the word "radio", such as "Washington Radio". (8) All VHF equipped aircraft will be provided with a card to be prominently mounted near the VHF control box which will specify button, frequency, and service obtainable. An index of AACS Airways Stations within the U.S., together with a listing of the assigned frequencies, may be found on pages 94 and 95 of T.O. 08-15-1. The following table displays the channels and frequencies normally used to contact the various communication installations:

Button	Frequency	Service
A	116.10 mc.	CAA AIRWAYS (RANGE STATIONS) *AACS Airways (Plan 62)
B	126.18 mc.	CONTROL TOWERS
C	137.88 mc.	AACS AIRWAYS (PLAN 62) *Control Towers
D	140.58 mc.	MILITARY EMERGENCY AND GCA FINAL APPROACH CONTROL

*Available for service indicated on a secondary basis.

(9) It will be some time before all AAF aircraft are equipped for operation on AACS Airways frequencies. It is not the intent that pilots flying aircraft not so equipped attempt to make position reports to Flight Service as described above. Emergency Flight Service advisories, however, may be transmitted to such aircraft on the AAF control tower frequency. Aircraft which are equipped for operation on AACS Airways frequencies will contact airways stations whenever possible rather than AAF control towers.

(10) The following list of telephone numbers will be used for contacting military Flight Service Centers:

CAA AREA	FLIGHT SERVICE AREA	PHONE NO.
Washington Pittsburgh New York Boston	Olmsted Flight Service Center Middletown, Penna.	Steelton 93387 " 93470
Jacksonville Miami	MacDill Flight Service Center Tampa, Fla.	Tampa H-4871
Memphis New Orleans Atlanta	Maxwell Flight Service Center Montgomery, Ala.	Montgomery 89
Cleveland Cincinnati Detroit Chicago St. Louis	Wright Flight Service Center Dayton, Ohio	Osborn 88691,88692
Fort Worth San Antonio	Fort Worth Flight Service Center Fort Worth, Texas	Ft. Worth 77251
Denver Minneapolis Kansas City	Lowry Flight Service Center Denver, Colo.	Denver LD 116 Denver LD 117
Los Angeles Albuquerque El Paso	March Flight Service Center Riverside, Calif.	Riverside 7107,7108
Oakland Salt Lake	Hamilton Flight Service Center San Rafael, Calif.	San Rafael 770
Great Falls Seattle	McChord Flight Service Center Tacoma, Washington	Tacoma LD 20 Tacoma LD 21

IFR CLEARANCE OF ARMY AIRCRAFT: Except as outlined below, no Army aircraft will be cleared for instrument flight unless such aircraft is equipped with a low frequency radio receiver capable of reception in the 200 to 400 kc. band. The BC-1206 (Detrola) receiver is not considered adequate as regards compliance with this directive. Aircraft not so equipped may be permitted to clear under IFR when the instrument type clearance is necessitated by reduced local visibility caused by fog, smoke, or haze, or when the flight will not be conducted under conditions which will require navigation by radio.

✓ CLEARANCE OF AAF AIRCRAFT IN NEW YORK CITY AREA: In accordance with AAF Letter 65-9 of January 21, 1947, the following instructions will govern the clearance of AAF aircraft to and from the New York City Area, (encompassed by a 25-mi.radius from the southern tip of Manhattan. (A) FLIGHTS INTO THIS AREA: AAF aircraft flying into the area will be initially cleared for Mitchel Field and if a landing is desired at any other field in the area, a change of flight plan must be secured through Mitchell Field (Army Flight Service). Such changes of flight plan may be approved under the following conditions only: (1) CFR. When the ceiling is at least 2000' and the visibility is 3 miles or more. (2) IFR. (a) When the visibility is not less than 1 mi. and the ceiling is unlimited. (b) When the visibility is not less than 2 miles and the ceiling is not less than 5000'. (B) FLIGHTS OUT OF THE AREA: AAF aircraft departing from the area from fields, other than Mitchel, will be cleared subject to the conditions listed above for CFR and IFR clearances. AAF aircraft engaged in regularly scheduled transport flights under the operational control of the A.T.C. are exempted from the above restrictions.

OPERATION OF ARMY HF/DF STATIONS: HF direction finding net listed on page 91, AAF Radio Facility Charts, dated Jan. 7, 1947, is unreliable,and bearings and fixes given should be used with caution. This condition will exist for an indefinite period due to malfunctioning of equipment.

VHF CHANNEL ASSIGNMENTS:

Following are Army assignments:

CHANNEL		ARMY FREQUENCY
A	--	116.1
B	--	126.18
C	--	137.88
D	--	140.58
G	--	137.70
H	--	134.10
U	--	108.3
V	--	108.7
W	--	109.1

Following are Navy assignments:

CHANNEL		NAVY FREQUENCY
A	--	116.1
B	--	126.18
C	--	140.58
D	--	142.74
1	--	124.38
2	--	128.70
3	--	142.02
4	--	142.56
5	--	144.36
6	--	146.16

✓ NAVY GROUND CONTROLLED APPROACH (GCA): Universal frequencies allocated primarily for Navy GCA operational use are as follows: HF Communications: 3475, 4890, 6640 kcs. VHF Communications - 134.64, 142.02, 143.64 mcs. As a safety precaution Navy GCA Units will also be prepared at all times to control both AAF and Navy aircraft on 140.58 mcs., emergency frequency. In addition to the standard frequencies listed in above paragraph the Navy GCA is prepared to transmit on HF from 2000 to 18100 kcs, and receive on 1500 to 9050 kcs. to aid any plane in emergency. It is the responsibility of the pilot desiring GCA assistance to establish communication with the appropriate control tower for preliminary approach instruction. The pilot will then be instructed as to the proper frequency for contacting the GCA Unit. If the pilot is unable to transmit or receive on the standard GCA frequencies, arrangements can be made through the control tower for the GCA Unit to shift to frequencies the plane can use, in the HF and VHF bands listed above. Navy GCA Operational Units are listed as follows: Charlestown NAAS, R.I.; Corpus Christi NAS, Tex.; Jacksonville NAS (Lee Fld.), Fla.; Moffett Field NAS, Calif.; Miramar MCAS, Calif.; New York NAS (Floyd Bennett), N. Y.; Norfolk NAS, Va.; Olathe NAS, Kans.; Oakland NAS, Calif.; Patuxent River NAS, Md.; Saufley Field NAAS, Fla.; Seattle NAS, Wash.; Whidbey Island NAS, Wash.; Weather minimums range from 100' and 1/4 mi. to 200' and 3/4 mi. All the stations except Moffett Field, Calif., and Patuxent River, Md., which are in continuous operation, require 30 to 60 minutes warm-up.

✓ ARMY GROUND CONTROLLED APPROACH (GCA): (A) CONTACT: Pilots requiring GCA assistance should call the associated control tower requesting instructions for working GCA. Example: "Andrews Tower, this is Army 5555,

request GCA". (B) TOWER INSTRUCTIONS: Control towers will ascertain frequencies available to both pilot and GCA, advise the pilot and establish contact with the GCA Unit. Example: "Army 5555 this is Andrews Tower, do you have channel G, over". "Andrews Tower this is Army 5555, channel G available, over". "Army 5555 this is Andrews Tower, establish contact with GCA on channel G, out". "Andrews GCA, this is Army 5555, over". "Army 5555 this is Andrews GCA, your position is now etc . . .". (C) EMERGENCY: When receiver and transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot. However, from a safety standpoint this procedure should be used as an emergency contingent only. (D) ALERTING GCA: After being inoperative, GCA units require approximately 20 to 30 minutes for warming up. Pilots should anticipate requirement for GCA in flight planning and request alerting of GCA units as far in advance as possible.

(E) INDEX OF GCA UNITS IN CONTINENTAL UNITED STATES:

ARMY GCA FACILITIES

STATION	FREQUENCIES Transmitting	FREQUENCIES Receiving	HOURS OF OPERATION	WEATHER MINIMUMS	REMARKS
Fairfield Suisun AAF, Calif.	126.18,128.16, 131.40,134.10, 137.70,137.88 140.58;3475, 4890,6640 kc.	278 kc.or any freq. between 1500-18,000 kc. on req.	1100-1900 Mon-Fri.; 30 min. standby for emerg.& IFR other times.	Day-200' ceiling-1 mi.vis. Night-300' ceiling 1 mi. visibility	Tng,emerg. and IFR
Barksdale Fld, La.	126.18,137.88, 140.58,137.70, 134.10 mc. 4890,3475,6640 kcs.	126.18, 137.88, 140.58, 137.70, 134.10 mc. 4495,6210 kcs.	0800-1700 Mon thru Friday		For Instrument Training.

Andrews Field, Md.	116.10,126.18, 134.10,137.70, 137.88,140.58 mcs.;3475,4890, 6640 kcs.	116.10, 126.18, 134.10, 137.70, 137.88, 140,58 mc. 3105,4495, 6210 kcs.	Cont.during IFR 0800-1700 daily & on 30 min. req.1700-0800 CFR		
Clinton Co.AAF, Ohio	116.1,137.70, 126.18,137.88, 140.58,134.10, mc.;3105,6440, 3475,4890,4495 kcs.	116.1, 137.70, 126.18, 137.88, 140.58, 134.10 mc.; 3105,6440, 3475,4890, 4495 kcs.	0600-2200 daily or 2200-0800 IFR or on 30 min. notice thru tower		
Langley Field, VA.	3475,4890,6640 kc.;116.1,126.18, 137.88,140.58, 134.1,137.7 mcs.	3105,4495, 6210 kcs.; 116.1, 126.18,137.88, 140.58,134.1, 137.7 mcs.			
Mitchel Field, N. Y.	116.10,126.18, 137.88,140.58, 134.10,137.70; 3475,4890,6640 kcs.	116.1,126.18, 137.88,140.58, 137.70,134.10 mcs.;3105, 4495,4765 kc.	Cont.during IFR,GCA 500' practices 0900-1130 and 1300-1630 during CFR or on req.during CFR within 40 min.		

FOREIGN ENTRY PROCEDURES; AIRPORTS OF ENTRY, CUSTOMS REPORTS, U.S. CIVIL AIRCRAFT CLEARANCE FOR FOREIGN COUNTRIES, CANADIAN REGULATIONS FOR CFR FLIGHTS, CANADIAN INSTRUMENT FLIGHT RULE FLIGHT, FLIGHT INTO PANAMA CANAL ZONE, CARIBBEAN AREA - RADIOBEACONS FOR USE WITH ADF: These procedures and regulations were all incorporated into the Flight Information Manual, Vol. 1, No. 2, dated Jan. 1, 1947. Only amendments to the data contained in the Manual will hereafter be carried in the Airman's Guide.

✓ MEXICAN ENTRY FEES: At Mexican Airports of Entry, charges include an overtime fee of 30 pesos after 12 noon for Immigration Inspection and a fee based on a full day's wage for each inspector involved for each 3 hours of overtime or fraction thereof after 2 P.M. for Customs Inspection. Changes may also be made for a Customs guard to watch the plane and for the taxi fare to bring inspectors to the field after 12 noon. In American money total fees may approximate $15 to $20.

SAN JUAN, P.R., PRE-FLIGHT CLEARANCES: The Isla Grande Airport at San Juan, Puerto Rico, is a part of the U.S. Naval Air Station, San Juan. Commercial air carriers may not operate at this field without receiving specific authorization from the Chief of Naval Operations, Washington, D.C. The Commanding Officer NAS, San Juan, may grant permission for one or two isolated landings. In any case, proper authority must be obtained prior to landing at San Juan. Privately owned aircraft in a ferry status must obtain permission from the commanding officer before landing at Isla Grande Airport.

✓ NEW PRIV.FLIER VHF FREQUENCIES: All CAA Communications Stations and Towers are discontinuing receiving watches on 131.7 and 131.9 mcs as new equipment becomes available to guard the new private flier frequencies of 122.1 mcs for transmission to CAA Communications Stations and 122.5 mcs for transmission to CAA operated towers. Practically all CAA towers now guard 122.5 mcs but the communications stations program is not fully effective yet because of non-receipt of the new receivers.

CAA communications stns will reply to itinerant aircraft on 111.1 mcs or the voice channel of the VHF radio range. CAA arpt control towers will reply to itinerant acft on 1 of the freqs. 118.3,118.5,118.7,or 118.9 mcs.See individual data pages in AIRCH for inclusion of these freqs. as commissioned.

U.S. WEATHER BROADCASTS AND TRANSMISSIONS: The time of observation for all weather reports is 30 minutes after the hour, unless otherwise announced. Pilots enroute are requested to avoid, if possible, calling airway communications stations at or about 15 and 45 minutes past the hour to request weather information, as such calls may delay starting of scheduled broadcasts and cause inconvenience to other persons who are dependent on the broadcasts for weather reports.

RADIOTELEPHONE COMMUNICATIONS: The word ROGER in radiotelephone communications means "I have received all of your last transmission", and its use in any other sense by CAA stations and towers is not authorized. In order to avoid confusion it is suggested that pilots engaging in air-ground contacts also limit the use of ROGER to acknowledgment of transmissions.

SURVEY OF AIRCRAFT OWNERS: The CAA is conducting a survey to obtain better information on the kind and amount of personal flying now being done in the country, and shortly will send out 25,000 survey cards. By choosing a good "sample" of the personal fliers, the CAA hopes to obtain information that will adequately reflect the activities of the 85,000 owners of aircraft in the U.S. It is highly important, however, that as many of the 25,000 cards as possible be returned, since this is the only means by which the CAA can obtain authoritative information on which to base its statistics. These statistics will be used by the whole industry, and the safety figures resulting from them may have effect on many things, including the insurance rates being charged in private flying. All survey card recipients are urged to fill in the questionnaires and return them as soon as possible.

INSTRUMENT FLIGHT, NEW YORK METROPOLITAN AREA: Effective Feb. 18, 1947, revised arrival, departure, holding, instrument approach and control procedures utilizing new radio aids were placed in effect in New York Metropolitan Area. Non air carrier pilots proposing instrument flight through this area or to or from Newark, Mitchel, or La Guardia Fields should write the Chief Controller, New York Air Traffic Control Center, Box 575, La Guardia Field, New York, for copies of applicable Operations Letters describing these procedures.

NEW YORK OVERSEAS FOREIGN AERONAUTICAL STATION: Effective Dec. 4, 1946, the broadcast of navigation reports by WSY changed times of transmission and added the frequencies as follows: at 0200, 0400, 0600, 0800, 1000 and 1200 GMT broadcast is made simultaneously on 3380, 8720 and 12395 kcs. At 1400, 1600, 1800, 2000, 2200, and 2400 GMT, broadcast will be made simultaneously on 3380, 5960, 8720, 12395 and 16250 kcs. Form and contents of broadcast remain unchanged. Concurrently, the hourly metar and notam bdcasts are transmitted at 55 minutes past each hour between the hours of 0055 through 1155 GMT on 3380, 8720, and 12395 kcs., and between the hours of 1255 and 2355 GMT on 3380, 5960, 8720, 12395, and 16250 kcs. Contents of the metar and notam broadcast remain unchanged. The broadcast at 25 minutes past each hour was discontinued. Comments concerning the effectiveness of the above services will be appreciated.

REDESIGNATION OF CANADIAN AIR ROUTE: Effective Jan. 15, 1947, Paragraph 8.1 of Information Circular 0/55/96 was amended as follows: "8.1 Red Route No. 2. From the intersection of the SE leg of Regina, Sask. range and U.S.-Canadian Border, via Regina, Sask. range to Saskatoon, Sask. range".

ADDITION TO MONCTON (OCEANIC) A.T.C. AREA: Effective Feb. 1, 1947, the following was added to the Moncton (Oceanic) A.T.C. Area: . . . That portion of the North Atlantic Control Area assigned by the Provisional International Civil Aviation Organization to the Moncton Oceanic Centre within the following limits: From 66-30N and 60° W, south to the coast of Labrador and following this coast S to the outermost tangent lines from the E coast of Labrador to the Eastern coast of Newfoundland and along this tangent line to the coast of Newfoundland, then following the coast of Newfoundland to its southernmost tip, then along a line direct to the southernmost tip of Nova Scotia, then directly S to the 43rd parallel, E along the 43rd parallel to the 30th meridian, N to the 61st parallel, W along this parallel to a point 100 miles E of the E coast of Greenland, then following a line 100 miles seaward from the S and W coasts of Greenland to the 66-30N parallel, thence W along this parallel to the 60th meridian.

REDESIGNATION OF CIVIL AIRWAYS: Effective March 15, 1947, Part 600 of the Regulations of the Administrator will be amended so that the airway designations will read in whole or in part as follows: (1) Green airway #5 (Los Angeles to Boston) . . . Mitchel Field (Army) rng stn, the intersection of the NE leg of Mitchel Field (Army) and the SW leg of Boston to the intersection of the SW leg of Boston and the SE leg of Westfield. (2) Amber airway #4 (Brownsville to Minot) . . . Bismarck rng stn and the intersection of the N leg of Bismarck and the SE leg of Minot to Minot rng stn. (3) Red airway #1 (Portland to Kansas City, Mo.). . . Fort Bridger,Wyo. range stn. From the intersection of the NW leg of Laramie,Wyo. and the NW leg of Cheyenne,Wyo. via Laramie, Wyo. and the NW leg of Cheyenne via Laramie, Wyo. range stn to the intersection of the SE leg of Laramie and the N leg of Denver... (4)Red airway #6 (Las Vegas to Grand Island). From the intersection of the NE leg of Las Vegas, Nev. VHF radio range and the SW leg of St. George VHF radio range via St. George VHF radio range; Bryce Canyon VHF range stn; Hanksville, Utah VHF rdo rng stn.; the intersection of the NE leg of Hanksville VHF rng and the SW leg of Grand Juction VHF rng; Grand Juction VHF rng stn; the intersection of the NE leg of Grand Junction VHF range and the SW leg of Eagle;Eagle VHF rng stn to the intersection of the NE leg of Eagle VHF rng and the W leg of Denver,Colo. VHF rng to Denver, Colo. VHF rng stn. . . (5) Red airway #13 (Sunbury to Boston). . . Stewart Field rng stn; New Hackensack, rng stn; Hartford rng stn. . . (6) Red airway #19 (Washington to Grand Rapids). From the intersection of the W leg of Front Royal and the SE leg of Morgantown via Morgantown rng stn to the intersection of the NW leg of Morgantown and the W leg of Pittsburgh . . . (7) Red airway #33 (Richmond to New Hackensack) From Richmond rng stn via Gordonsville rng stn. . . (8) Red airway #37 (Dallas to Washington). From the intersection of the NW leg of Tyler, Tex. and the E leg of Dallas via Tyler rng stn to the intersection of the NE leg of Tyler and the W leg of Shreveport. From the intersection of the NE leg of Texarkana and the SW leg of Little Rock via Little Rock rng stn; Stuttgart rng stn to the intersection of the E leg of Stuttgart and the W leg of Memphis. . . (9) Red airway #50 (Galena to Fairbanks). From the intersection of the E leg of Galena and the SW leg of Tanana via Tanana rng stn to the intersection of the SE leg of Tanana and the W leg of Fairbanks. From Nenana rng stn to the intersection of the SE leg of Nenana and the SW leg of Fairbanks. (10) Red airway #60 (Oakland to Stockton). From Oakland rng stn via Stockton rng stn; to the intersection of the E leg of Stockton rng stn and the SE leg of Sacramento rng stn. (11) Blue airway #18 (Philadelphia to Burlington). From the intersection of the NE leg of Philadelphia and the SW leg of New York (La Guardia) via the intersection of the NE leg of Philadelphia and the SW leg of Idlewild; Idlewild range stn. . . (12) Blue airway #36 (Akron,Colo. to North Platte). From Akron rng stn to North Platte rng stn. (13) Amber airway #7 (Key West to Caribou). From Key West rng stn via a point at lat 24-51-20, long. 80-40-20; Miami rng stn . . . . . Richmond, Va. rng stn; the intersection of the N leg of Richmond and the S leg of Washington; Washington rng stn; the intersection of the NE leg of Washington and the SW leg of Philadelphia; Philadelphia rng stn; Newark rng stn; the intersection of the NE leg of Newark and the NE leg of New York (La Guardia); Hartford rng stn. . . (14) Bismarck,N.D. to Minot, N.D. civil airway will be cancelled.

REDESIGNATION OF RADIO FIXES: Effective March 15, 1947, Part 601 of the Regulations of the Administrator will be amended so that the radio fix designations will read in whole or in part as follows: (1) Green airway #2 (Seattle to Boston). . . La Crosse, Wis. rng stn; Lone Rock rng stn; Milwaukee rng stn; Muskegon rng stn; Grand Rapids rng stn. . . (2) Green airway #3 (San Francisco to New York). . . Cheyenne rng stn; the intersection of the SE leg of Scottsbluff and the W leg of North Platte; North Platte rng stn. . . (3) Green airway #5 (Los Angeles to Boston). . . Columbus rng stn; El Paso rng stn. . . . . Gordonsville rng stn; Doncaster fan type rdo marker stn or the intxn of NE leg of Gordonsville and the S leg of Washington; Brandywine rng stn; the intersection of the SE leg of Baltimore and the SW leg of Millville; Millville rng stn; the intersection of the SE leg of Hartford and the SW leg of Boston. (4) Amber airway #4 (Brownsville to Minot). . . Waco rng stn; the intersection of the E leg of Granbury and the S leg of Ft.Worth; Marietta fan type rdo marker stn or the intersection of the N leg of Ft. Worth and the S leg of Oklahoma City; Oklahoma City rng stn. . . (5) Amber airway #7 (Key West to Caribou). . . Newark rng stn; Portland rng stn; Augusta rng stn; Bangor rng stn; Millinocket rng stn; Presque Isle rng station. (6) Red airway #1 (Portland to Kansas City). . . Burley rng stn; Laramie rng stn; Salina rng stn. (7) Red airway #6 (Las Vegas to Grand Island). St. George VHF rng stn; Hanksville VHF rng stn; Eagle VHF rng stn; Akron rng stn; Hayes Center rng stn. (8) Red airway #13 (Sunbury to Boston). Wilkes-Barre rng stn; Stewart Fld rng stn; the intersection of the SW leg of Boston and the W leg of Providence; Providence rng stn. (9) Red airway #19 (Washington to Grand Rapids). Fort Wayne rng stn. (10) Red airway #33 (Richmond to Boston). Arcola rng stn; the intersection of the NE leg of Arcola and the W leg of Baltimore. (11) Red airway #37 (Dallas to Washington). Tyler rng stn; Little Rock rng stn. (12) Red airway #60 (Oakland to Stockton). Stockton rng stn. (13) Blue airway #4 (Boston to U.S.-Canadian Border) Burlington rng stn; Concord rng stn. (14) Blue airway #11 (Cleveland to Niagara Falls). Erie rng stn.

REDESIGNATION OF AIRWAY TRAFFIC CONTROL AREAS: Effective March 15, 1947, Part 601 of the Regulations of the Administrator will be amended so that the Airway Traffic Control Areas will read in whole or in part as follows: (1) Amber airway #4 ATC Area (Brownsville to Minot). All of Amber airway #4. (2) Red airway #1 ATC Area (Portland to Kansas City). All of Red airway #1 from Portland rng stn to the intersection of the SE leg of Laramie and the N leg of Denver. From Akron rng stn to a line extended at right angles across such airway thru a point 25 mi. SE of Akron rng stn; from such line and between the altitudes of 6500' above mean sea level and 8500' above mean sea level to a line

extended at right angles across such airway thru a point 25 mi. W of Kansas City rng stn; from such line to Kansas City rng stn. (3) Red airway #6 ATC Area (Las Vegas to Grand Island). All of Red airway #6. (4) Red airway #19 ATC Area (Washington to Grand Rapids). All of Red airway #19. (5) Red airway #33 ATC Area (Richmond to New Hackensack). All of Red airway #33. (6) Red airway #37 ATC Area (Dallas to Washington). All of Red airway #37(7)Red airway #50 ATC Area (Galena to Fairbanks). All of Red airway #50 between the intersection of the NW leg of Nenana and the W leg of Fairbanks and the SE leg of Nenana and the SW leg of Fairbanks. (8) Red airway #60 ATC Area (Oakland to Stockton). All of Red airway #60.

AIRPORT APPROACH AND TRAFFIC ZONES: Effective March 15, 1947, all Airport Approach Zones in the 1st, 4th, and 5th C.A.A. Regions will be abolished and all airport traffic zones will be revised as depicted on the Airman's Guide Flight Planning Charts.

CIVIL USAGE OF MILITARY FIELDS: Army and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

OLD PILOT CERTIFICATES MUST BE EXCHANGED: All pilot certificates issued prior to July 1, 1945, will expire on July 1, 1947. Such certificates may be exchanged for new-type certificates at any time prior to their expiration date. No red tape or written application is involved in the exchange. The pilot merely presents his old-type certificate to a CAA inspector, who immediately issues a new-type certificate. A pilot can arrange to make the exchange at a CAA regional or district office, or during a CAA inspection trip to his local airport. The new-type certificates will be valid for at least 24 months from the date of issue, and the Civil Aeronautics Board is considering extending them for an even longer period.

AERONAUTICAL CHART AND PUBLICATION CORRECTIONS: (a) Correct TO-08-15-1, pages 25 and 27, by showing the minimum northbound altitude for Red airway #20 Washington to Pittsburgh as 6000'. (b) Correct Charlotte Sectional Aeronautical Chart, dated Oct. 25, 1946, by deleting code beacon at Greenville Arpt, S.C. and inserting a rotating beacon with a clear side and a green side. (c) Correct Instrument Approach Chart for Greenville Arpt, S.C., dated Oct. 1, 1946, by deleting code beacon and inserting a rotating beacon with a clear side and a green side. (d) Correct World Aeronautical Chart 304, Crater Lake, dated April 1946, by changing elevation of mountain at lat. 42-47, long. 122-55 to 4825'. (e) Correct Fac.Chart, RF-26, dated Jan. 16, 1947, by showing the bearings of NE/SW leg of Rodeo, N.Mex. Range as 24° and 204° mag. towards station.

WEATHER REPORTING SERVICE

The following Supplementary Weather Reporting Stations were closed effective December 20, 1946: Jacumba, Calif.; Warner Springs, Calif.; Niland, Calif.; Desert Center, Calif.; Essex-Amboy, Calif.; Ludlow, Calif.; Afton, Calif.; Chloride, Ariz.; McNary, Ariz.; Chambers,Ariz.; Peach Spgs, Ariz.; Seligman, Ariz.;Holbrook, Ariz.; Wikieup, Ariz.; Wickenburg, Ariz.; Casa Grande, Ariz.; Morenci, Ariz.; Hayden, Ariz.; Sentinel, Ariz.; Salome, Ariz.; Sells, Ariz.; Bowie, Ariz.; Bisbee, Ariz.; Sasabee, Ariz. Parker, Ariz.; Wellton, Ariz.; Benson, Ariz. Nogales, Ariz.

Weather Reporting Station	Type of Station		Lat., Long.	Elev.	Effect.Date
Southwest Harbor, Me.	6-Hourly	Closed			12-20-46
Cape May, N. J.	Pibals	Closed			12-20-46

Philip, S. Dak.	Hourly	To be reestab. soon.	44°03', 101°35'	2212'	

Note: Rawin observations are no longer available from Tampa, Fla.; Denver, Colo., Amarillo, Tex.; Seattle, Wash. Supplementary weather reports were discontinued at Salinas, Calif.; hourly reports were inaugurated in lieu thereof. On or about March 1, 1947, supplementary weather reports will be discontinued from Gooding, Idaho (Gooding Airport-New) and hourly reports are to be available in lieu thereof.

TELETYPE NOTAMS: Throughout the year climatic conditions (snow storms, floods, etc.) render many fields temporarily unusable or unsafe. In addition, there are intermittent maintenance operations in progress on many fields. Radio facilities suffer temporary power failures or course misalignments, and lighting facilities are temporarily inoperative. Because these temporary conditions cannot be given immediate coverage in the "Airman's Guide", full cognizance must be taken of Teletype Notam service which gives the desired coverage on any facility or field at which teletype transmitting stations are based. Cross-country pilots, accordingly, should consult these Teletype Notams for latest available data on air navigation aids. These teletype notams are posted in CAA Communications Stations and in all Army Air Field and Naval Air Station Operations Offices having teletype drops.

N.B. AIRPORT TRAFFIC CONTROL PROCEDURES: (a) Planes with 2-way radio should establish communication with control tower when 15 miles from the airport of destination and before taxiing or taking off. (b) Planes without receivers, when approaching tower-controlled fields and before taxiing and taking off, should be on the alert for and be guided by light gun signals. (See AAF Regulation 100-4, dated March 4, 1944, and CAR Digest or Manual 60). (c) Flashing tetrahedron lights, as well as the daylight operation of rotating beacons coupled with flashing red code lights, indicate suspension of CFR traffic.

AIR NAVIGATION AID DATA

All radio facilities except towers are CAA facilities unless otherwise cited. All towers are listed by operating agency. All range bearings are magnetic inbearings. All fan markers and station location markers operate on 75 mcs. All radio facilities operate continuously unless otherwise specified.

LEGEND

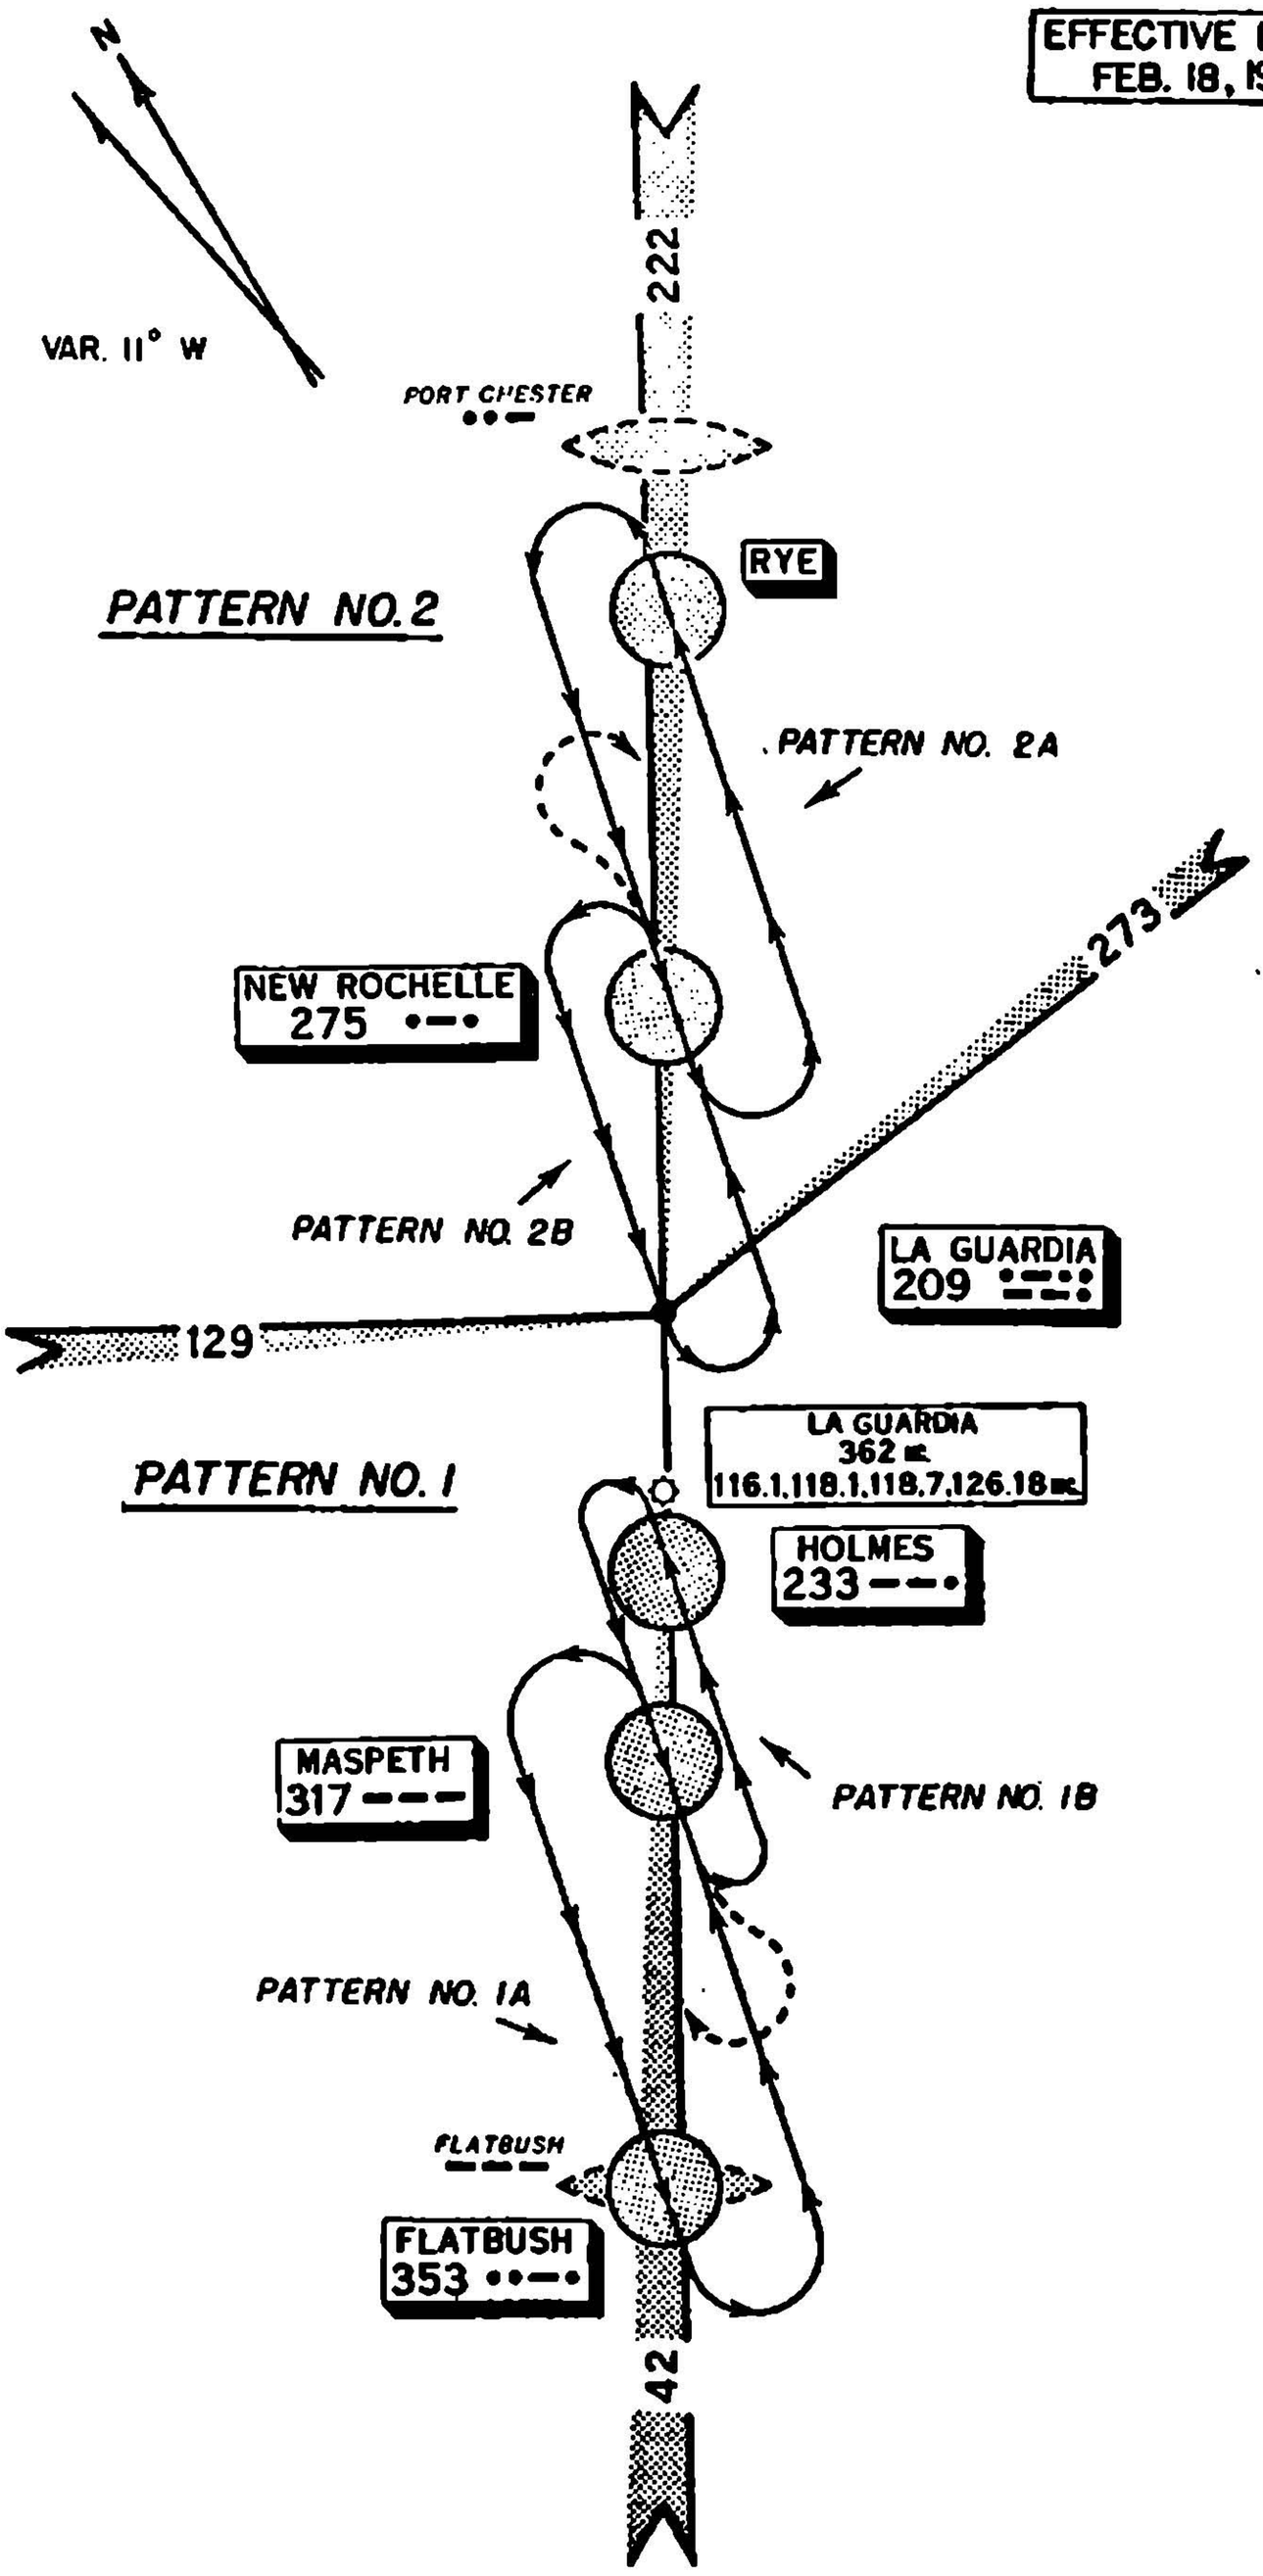
LA GUARDIA FLD. ADF HOLDING & INSTRUMENT APPROACH PROCEDURES



EFFECTIVE DATE
FEB. 18, 1947

NOTE: THIS CHART IS PRESENTED FOR ILLUSTRATIVE PURPOSES ONLY AND IS NOT TO BE USED FOR NAVIGATION.

ADF HOLDING AND INSTRUMENT APPROACH PROCEDURES FOR LA GUARDIA FIELD, N. Y.

The complete patterns outlined in Holding Pattern #1 will be used for North landings and the #2 Pattern will be used for South landings.

ADF approaches and holding will be in accordance with those procedures shown, normally when the La Guardia ceiling is reported less than 1000'. La Guardia Approach Control, however, will advise in all cases of the type of holding and approaches to be made.

Holding in Patterns 1A and 2A will generally be at the 5500,6500, 7500,8500, and 9500 foot levels. Holding in Patterns 1B and 2B will be at 4500,3500, and 2500 foot levels.

Pilots will be advised when to report over Maspeth or New Rochelle while in Patterns 1B and 2B and will be given a course to steer and advised when right turns to be made for return to the La Guardia radio range courses for final approach to the airport.

Appropriate detailed information concerning these procedures and for the entire New York Metropolitan Area are contained in the New York Airway Traffic Control Center Operations Letter #14, copies may be obtained from:

Chief Controller,
New York Airway Traffic
Control Center
La Guardia Field, N.Y.

Important Note: The Rye, N.Y. locator marker was not commissioned at the time this drawing was prepared. Consult the Airman's Guide for commissioning date, frequency, and identification.

INDEX TO FLIGHT PLANNING CHARTS

SPECIAL NOTICE

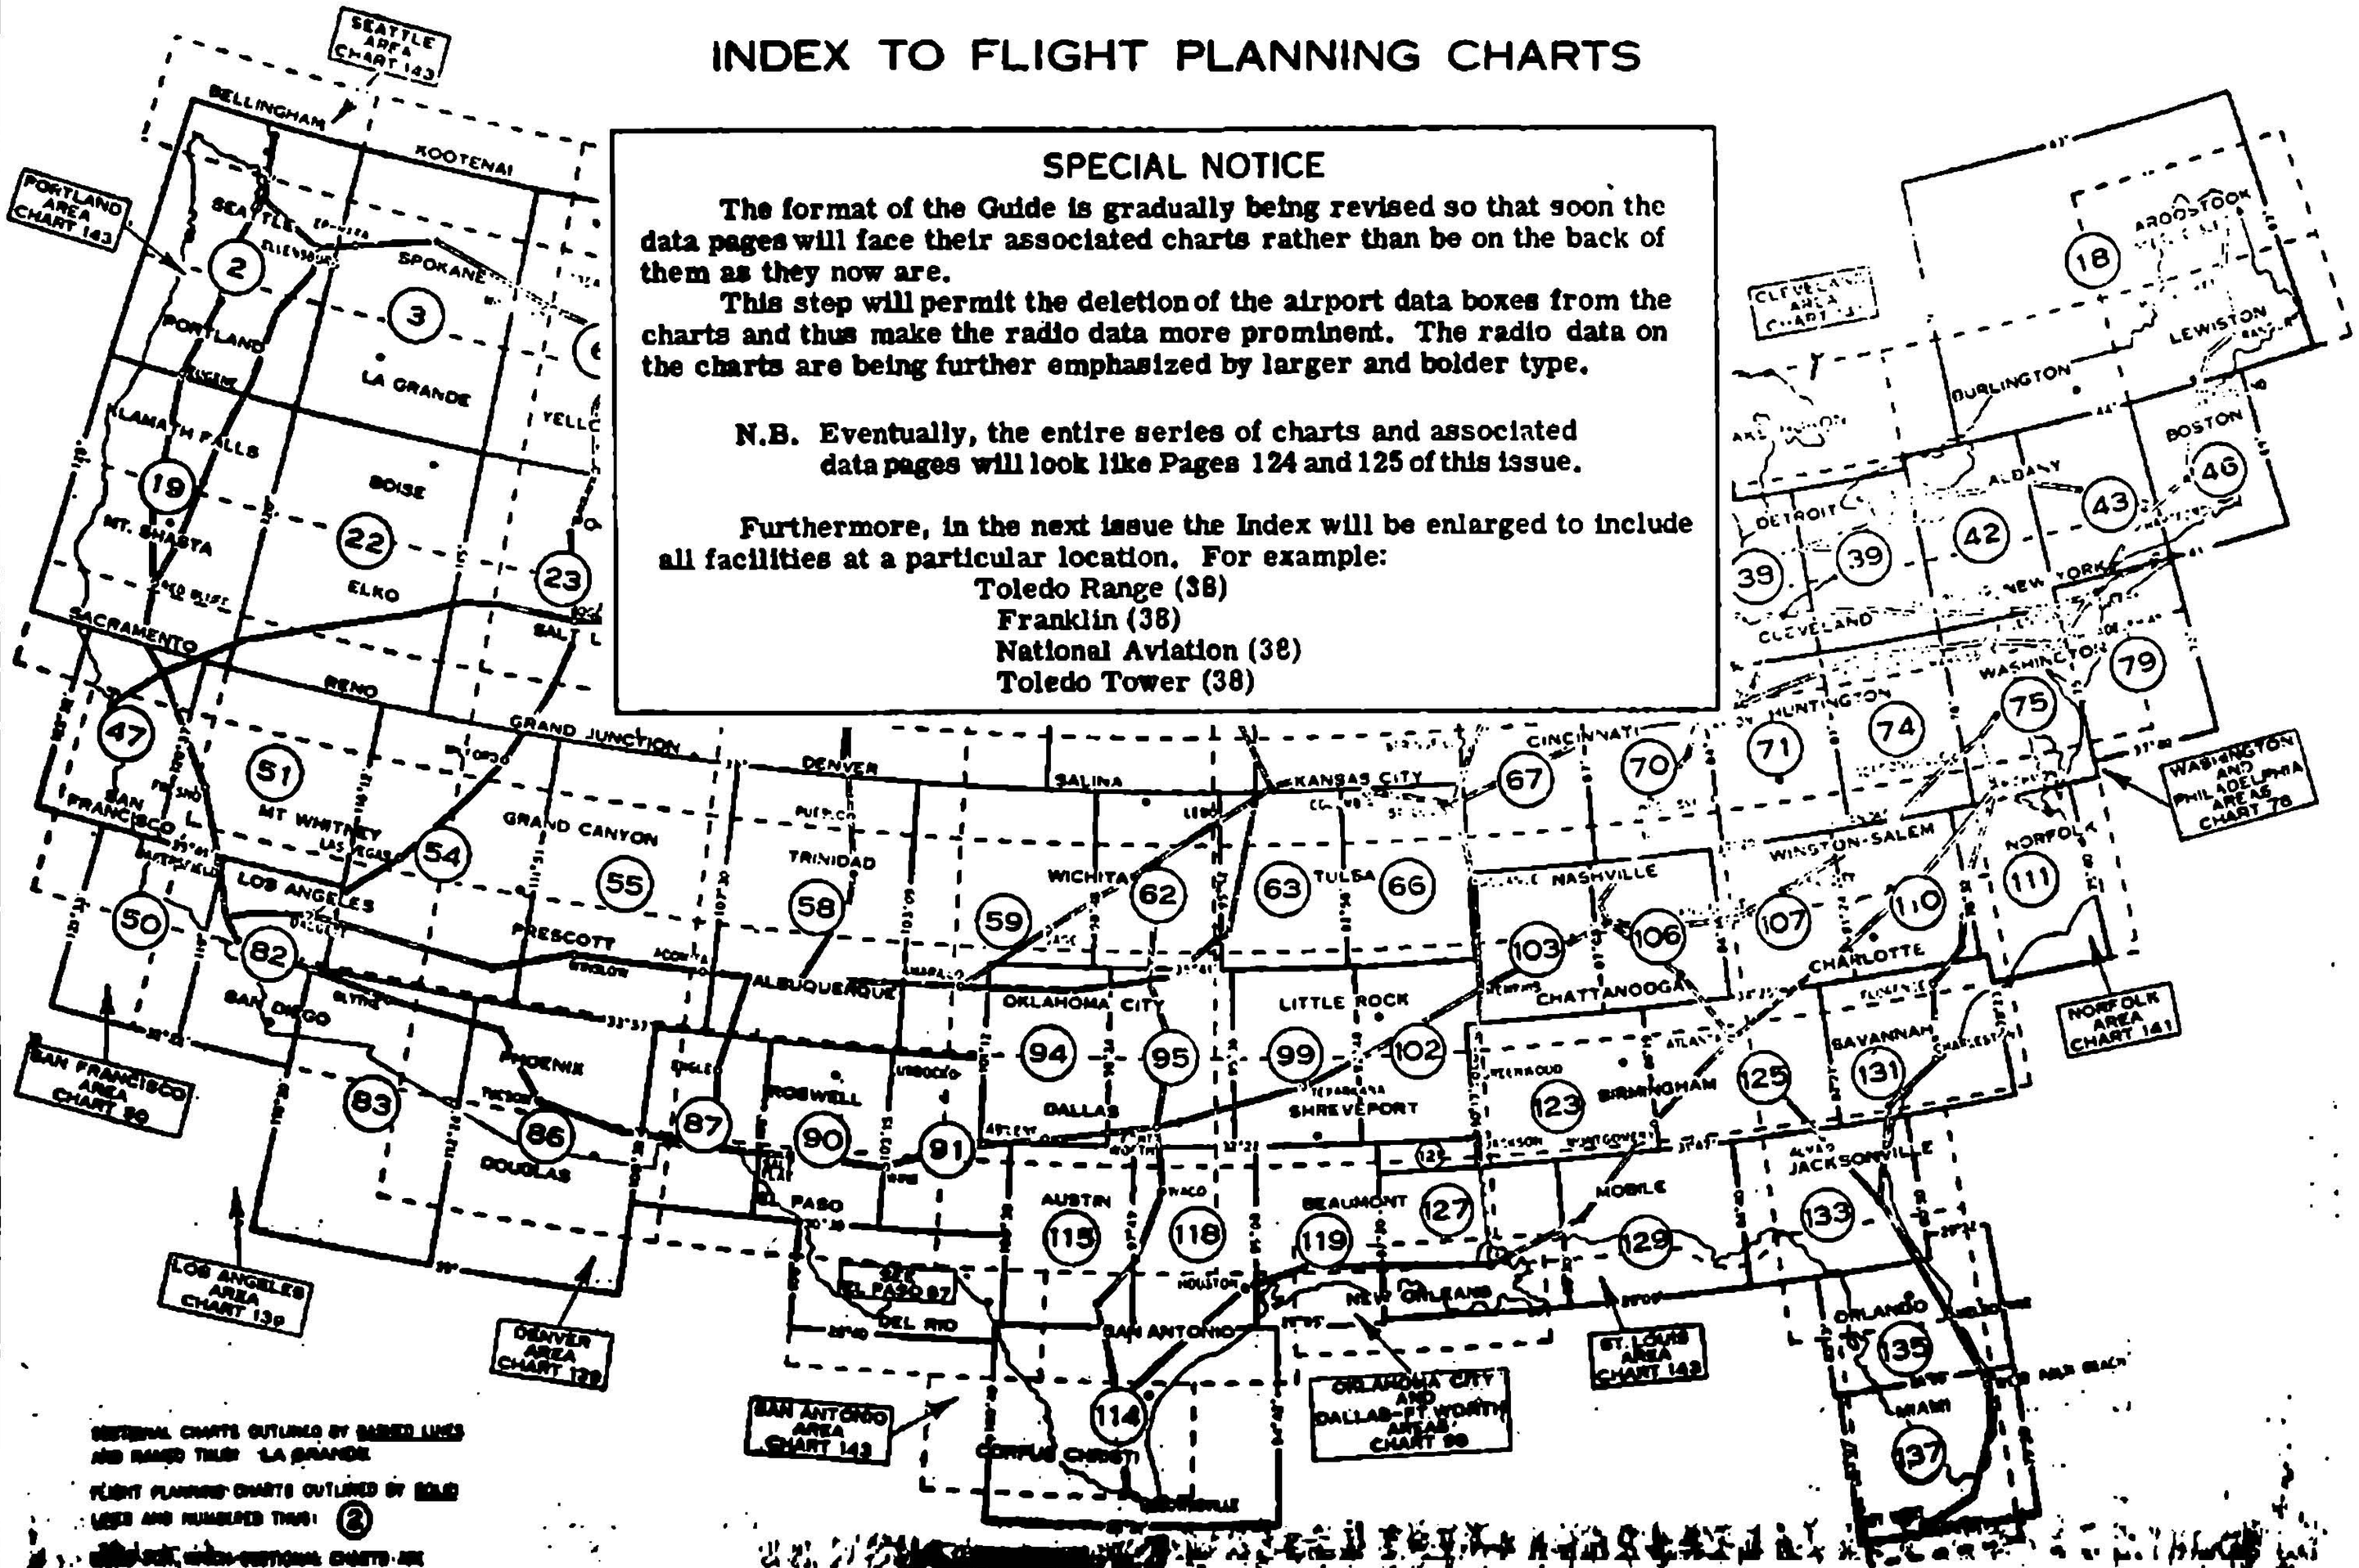
The format of the Guide is gradually being revised so that soon the data pages will face their associated charts rather than be on the back of them as they now are.

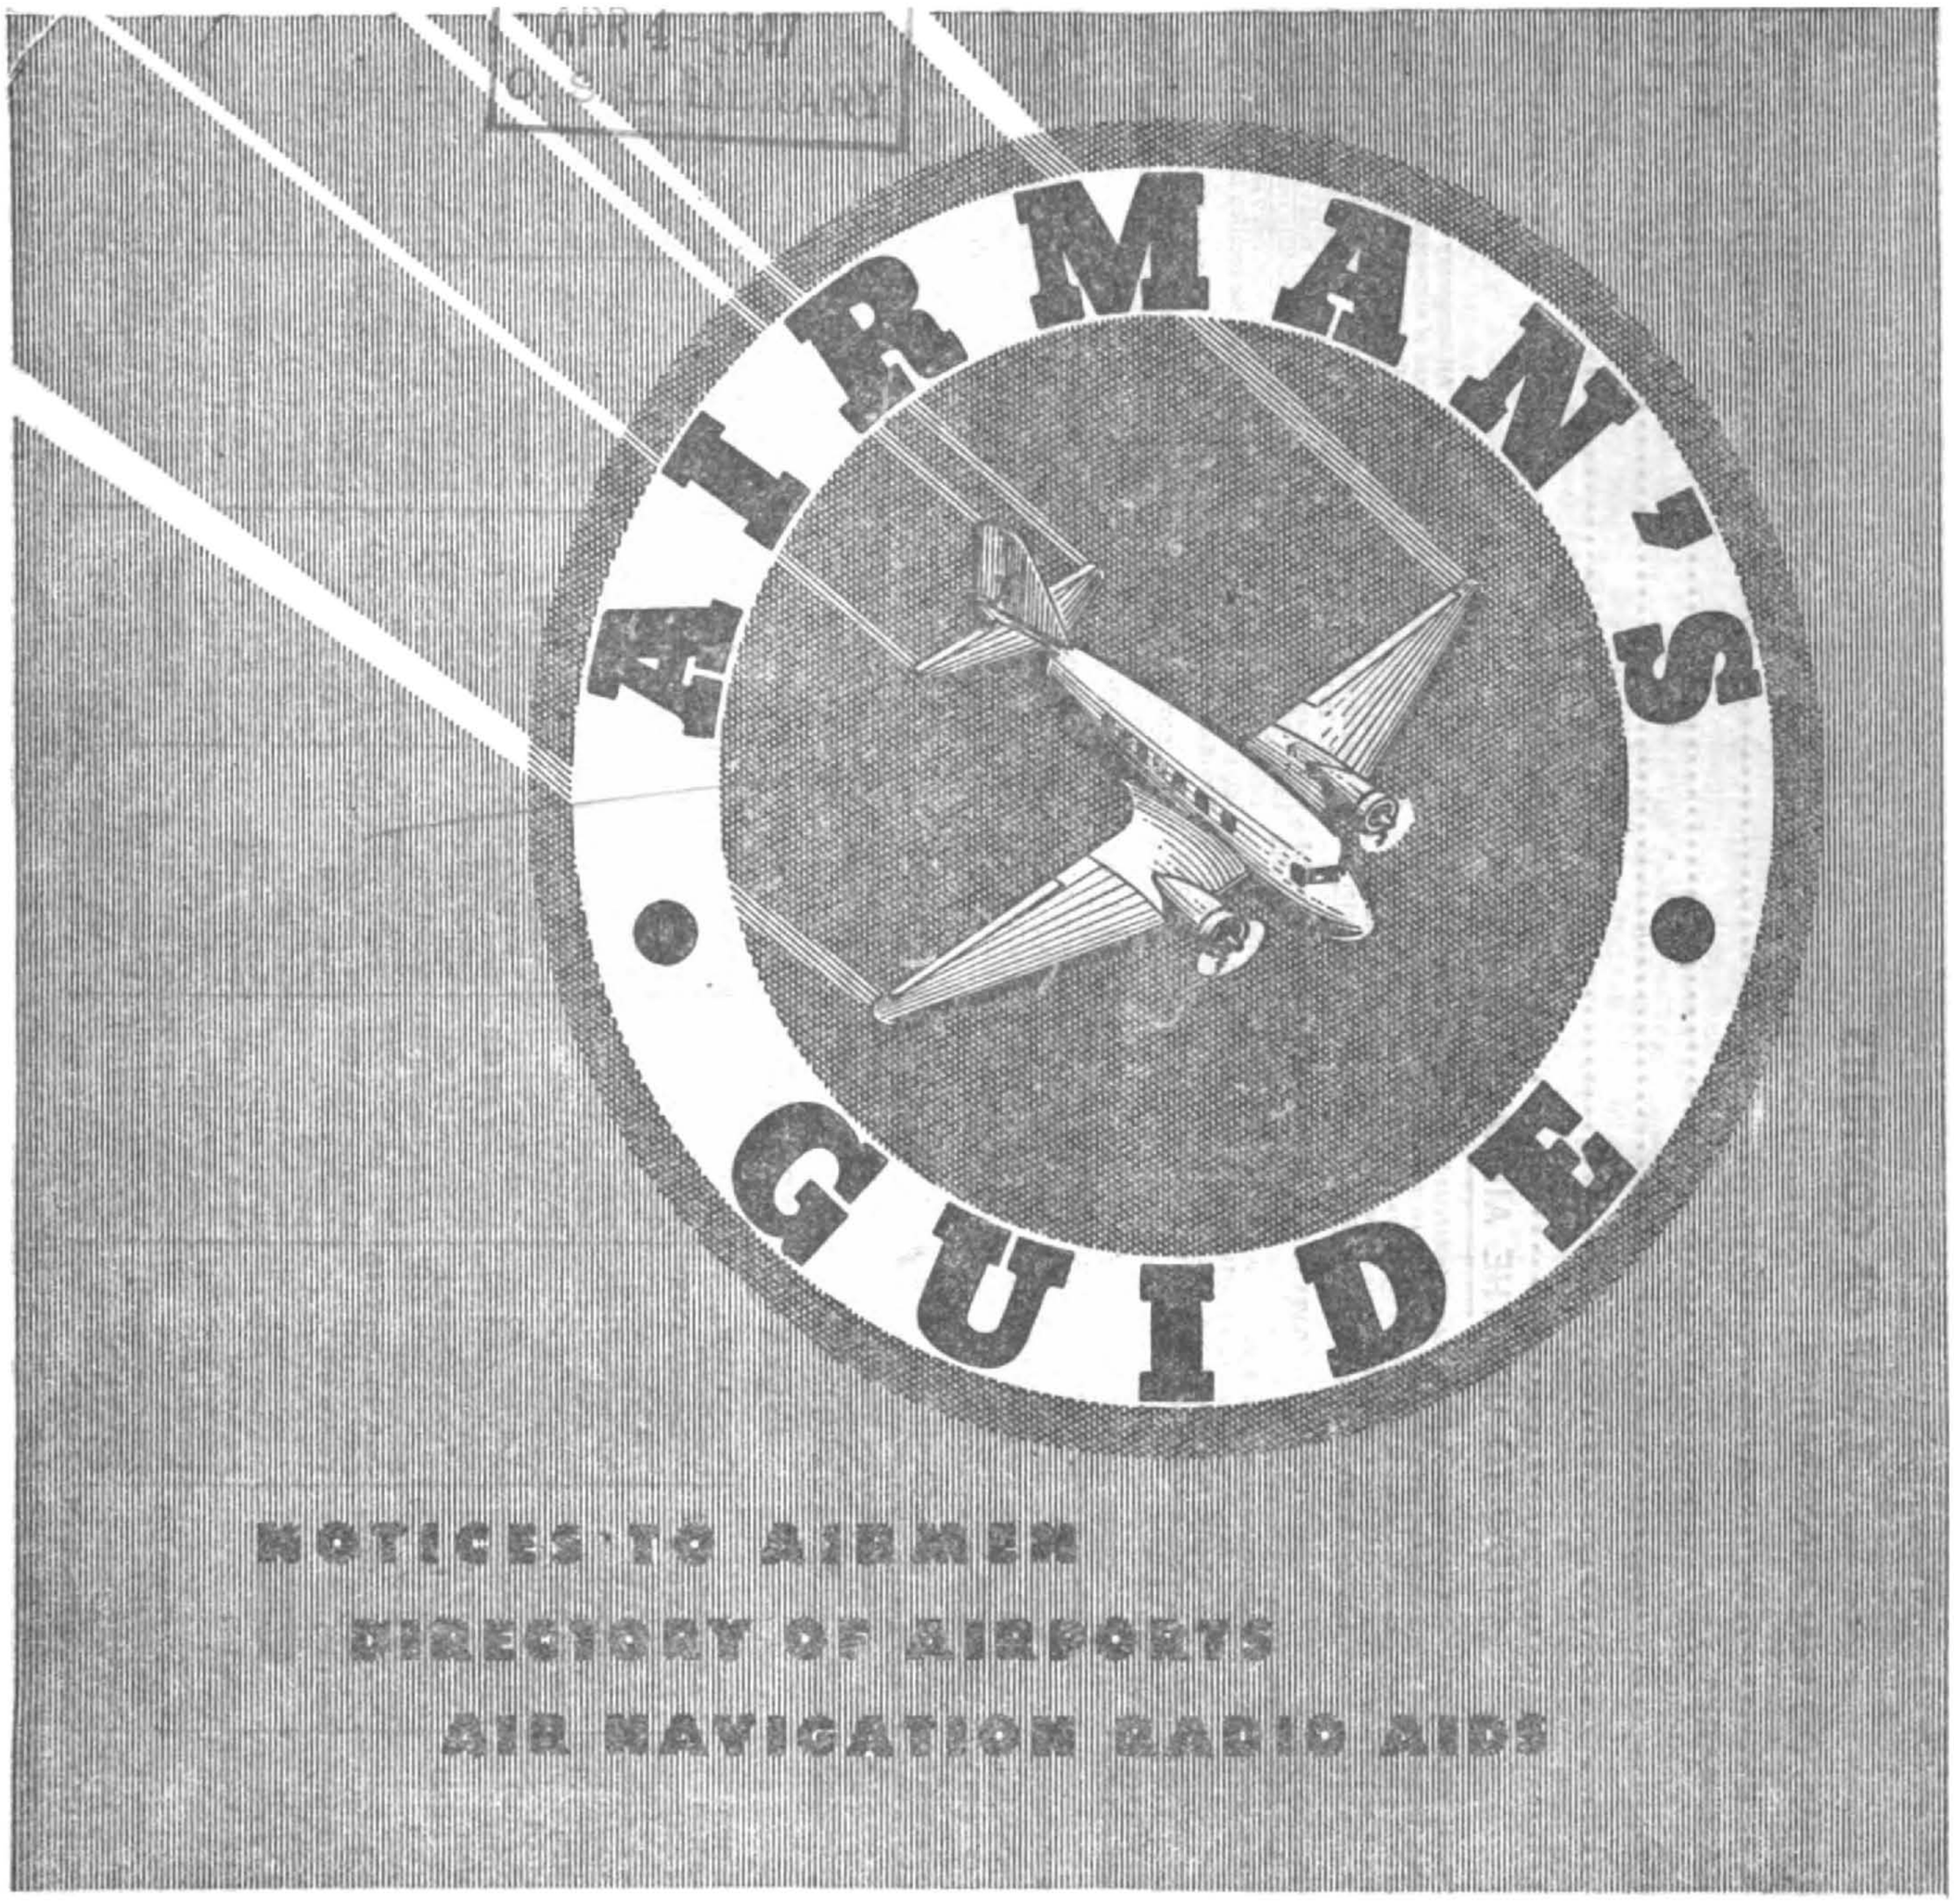
This step will permit the deletion of the airport data boxes from the charts and thus make the radio data more prominent. The radio data on the charts are being further emphasized by larger and bolder type.

N.B. Eventually, the entire series of charts and associated data pages will look like Pages 124 and 125 of this issue.

Furthermore, in the next issue the Index will be enlarged to include all facilities at a particular location. For example:

Toledo Range (38)
Franklin (38)
National Aviation (38)
Toledo Tower (38)





VOL. 1, NO. 26 .... MARCH 18, 1947

This issue includes all data on record as of 0001 E.S.T. on the date above. For later information consult teletype NOTAMS.

HOW TO USE THE AIRMAN'S GUIDE

GUIDE CONTENTS: The Airman's Guide is a composite Directory of Airports, Air Navigation Radio Aids, and Notices to Airmen. On the data pages are tabulated all the data covering the facilities charted on the facing pages. This presentation is gradually being revised, however, so that eventually the data pages will face the charts.

INDEX OF FACILITIES: To find the number of the page on which a facility is charted, refer to the Index of Facilities below. As outlined above, the detailed data for that facility will be found on the data page backing, or facing the chart.

NEW DATA PRESENTATION: (a) On the data pages backing or facing the charts, new data or revisions are indicated by arrows; (b) in the Notices to Airmen section, citations covering new or revised radio data are prefixed by one large star " ★ ". Citations covering new or revised airport, or miscellaneous data, are prefixed by two asterisks "**"

DATA PAGE NOTAMS: Because of the serious paper shortage, the data pages, where possible, have to serve as notam (Notices to Airmen) pages. Resultantly, most of the new data formerly notamized in the Notices to Airmen section with prefixed large stars or double asterisks are no longer carried in that section. Only commissionings, abandonments, or changes so potentially hazardous that they are indicated with Ⓡ (for red flag) symbols on the charts, are now cited in the Notices to Airmen section. Notamizing on the data pages is effected by the use of prefixed arrows as in the former Air Navigation Radio Aids publication. All changes from the previous issue, whether cited in the Notices to Airmen section, or not, are indicated by the prefixed arrows. Following are examples of changes notamized only on the data pages: field obstruction, servicing, elevation, location, and runway length changes. Because of the use of the prefixed arrows as new data indicators, a further innovation had to be adopted. This is a tinted horizontal line following the last tabulated facility and titled either New Radio Facilities or New Airports.

NEW FACILITIES ON DATA PAGES: Space below the tinted horizontal lines on the data pages has been reserved as a supplement for new radio aids and airports whose data were received after the data pages were originally typed. Revisions to existing airports and radio aids are super-imposed on the old data. New airports and radio aids, however, are listed, necessarily out of alphabetical alignment, below the tinted horizontal lines until the page is re-typed.

CHART NOTAMS: Notamizing on the charts is effected by use of the super-imposed Ⓡ and Ⓞ symbols. The Ⓡ (for red flag) indicates a very hazardous condition or a major change. The Ⓞ symbol (for orange flag) indicates a minor change or hazardous condition with the facility still usable with caution. The pertinent details to which these symbols refer will be found listed in the Notices to Airmen section under the facility name (and state) by which they are charted.

Ⓡ and Ⓞ SYMBOLS: These symbols were adopted for super-imposition over charted facilities to indicate hazardous conditions and covering Notices to Airmen. Thus, if a chart user notes no symbol on the facilities he is planning on using there is no necessity for him to wade through the 30-odd page Notices to Airmen section.

NOTICES TO AIRMEN SECTION: All temporary conditions (field soft, runway under construction, range course out of alignment, etc.) are cited in full in the Notices to Airmen section until they are no longer in effect. When a citation carries a permanent item and a temporary item, the permanent item is underlined. Parenthetical date at end of item indicates time item was reported. To conform to chart practice, all facility data are listed in the Notices to Airmen section and on data pages alphabetically by states and by facility name. Thus, an airport will be found listed alphabetically under its own name rather than under its locale's name. If the airport or radio facility name is other than that of the city in which it is located, the location is shown in parenthesis after the facility name.

SPECIAL NOTICES: Notices of national interest, of great importance, or of non-localized nature, will be found at the beginning of the Notices to Airmen section.

WHO SHOULD BE ADVISED ABOUT CIVIL FACILITY CHANGES: Please advise the Office of Aviation Information, Attention A-260, C.A.A., Department of Commerce, Washington 25, D. C., as soon as temporary conditions covering civil airports or navigational aids begin or terminate, data revisions are effected, or flight hazards are erected or removed.

NOTICE TO ALL SUBMITTERS OF AIRMAN'S GUIDE DATA: An under-manned staff prevents an individual acknowledgment of data submitted for the Airman's Guide by telegram, teletype dispatch, or letter. Your cooperation in permitting a Guide citation to suffice as an acknowledgment will be appreciated.

AIR NAVIGATION RADIO AIDS

LEGEND

(3) - Station guards 3105, 4495, 6210 kcs
(4) - Station guards 3105, 4495, 6210, 3117.5 kcs.
(7-24) - Hours of operation (7 A M. to midnight) on a 24-hour clock basis
→ - New or revised data*

RADIO CLASS DESIGNATIONS

AC.....Approach Control Tower, CAA
B.....Scheduled Broadcast Station (broadcasts weather reports at 15 and 45 minutes after the hour unless otherwise cited)
C.....Control Tower, CAA
CA.....Control Tower, Army
CL.....Control Tower (City, County, Private, etc.)
CN.....Control Tower, Navy
D.....Distantly controlled
FM.....VHF fan type marker (100 watts)
FMK.....Compass locator station when combined with fan marker
GCA.....Ground control approach system
H.....Non-directional radio-beacon (homing), power 50 watts or more
ILS.....Instrument Landing System
IM.....VHF boundary marker
K.....Independent compass locator station
LFM.....VHF fan type marker, low powered (5 watts not over 10 miles from range)
MH.....Non-directional radio-beacon (homing), power less than 50 watts
ML.....Range (loop radiators), power less than 50 watts
MM.....VHF middle marker
MMK.....Compass locator station when combined with middle marker of Instrument Landing System
MRA.....Range (adcock, vertical radiators), power more than 50 less than 150 watts
MRL.....Range (loop radiators), power more than 50 less than 150 watts
OM.....VHF outer marker
OMK.....Compass locator when installed at outer marker site or within
P.....Point to point radio } 5.5 miles of middle marker
RA.....Range (adcock, vertical radiators), power 150 watts or more
RL.....Range (loop radiators), power 150 watts or more
S.....Simultaneous (range signals and voice) type of transmitter
T.....Teletype
TK.....Principal teletype
V.....Additional voice feature on VHF
VAR.....Visual-aural VHF range
W.....Without voice facilities
(W) .....ILS without voice feature
Z.....VHF station location marker at a range station

N.B. Variation is computed at the station. The distance from station to field is computed from the center of the range station to the nearest edge of the usable area of the airport. The bearing is that from the range station to airport or fan marker.

AIRWAY RADIO COMMUNICATIONS

GENERAL

All radio range stations (class RA, RL, MRA, MRL, ML) emit directional signals (type A2 emission) 1020 cycles per second modulation.

All radiobeacon stations (class H and MH) emit non-directional signals (type A2 emission) 1020 cycles per second modulation. Unless otherwise noted, all stations, other than class MH, operate continuously within their assigned hours of service except during interruptions for voice transmission on the same frequencies where simultaneous transmission is not available and during shutdowns for maintenance purposes. Class MH stations operate on request unless otherwise cited. The effective range of an MH facility is ordinarily 25 miles.

Compass locators are low-powered non-directional facilities operating in the 200-415 kc. band. They are installed near airports to make it easier for pilots to make instrument approaches. When holding is required, they also help the pilot follow a more precise holding pattern. Compass locators, however, should not be depended upon as long range navigational aids since they are rarely useful at distances of over 15 or 20 miles.

Voice communications facilities are available unless "W" (without voice) is included in the classification. Examples: SMRAW, MRLW, HW, HWT. Transmission of voice on a frequency other than the range frequency is indicated as MRLW-V. When no "W" is included in station class, the "V" indicates voice feature on two frequencies, namely, range frequency, and generally, VHF of 116.1 and/or 111.1 mcs. 116.1 mcs. is used for transmission to Army aircraft, 111.1 mcs. to civil aircraft.

The classification designation "B" denotes that the station broadcasts airway and meteorological information on a scheduled basis at 15 and 45 minutes past each hour unless otherwise cited.

All Civil Aeronautics Administration stations equipped for voice communications with aircraft stand continuous listening watches on the frequencies of 3105, 4495, and 6210 kcs., unless otherwise cited.

* AT THE BOTTOM OF THE LAST COLUMN, UNDER THE HEADING OF NEW RADIO FACILITIES, BORDERED BY TINTED LINE WILL BE FOUND, OUT OF ALPHABETICAL ALIGNMENT, ALL THE NEW RADIO FACILITIES TABULATED AFTER THE TYPE FOR THAT PAGE HAD BEEN ORIGINALLY SET UP.

N.B. For Digest of A.T.C. and Communications Procedures, *see FLIGHT INFORMATION MANUAL*

AIRPORT DATA

LEGEND

NAME

(When city and airport names are identical, the airport name is omitted in the interest of space-conservation)

(A) Airport owned or leased in whole or in part by Army
(CG) Airport owned or leased in whole or in part by Coast Guard
(N) Airport owned or leased in whole or in pary by Navy
(C) CAA Intermediate Field
(P) Non-military airport available for use by military aircraft (See Note 3)

N.B. If the airport name is followed by (A) for Army, (N) for Navy, or (CG) for Coast Guard, the field is exclusively an Army, Navy, or Coast Guard field. If the field is not exclusively Army, Navy, or Coast Guard and may be used by civilians, no (A), (N) or (CG) follows the airport name.

CLASS

SIZE

40: Length of longest landing strip (unpaved) in hundreds of feet
40h: Length of longest hard-surfaced runway in hundreds of feet (Seaplane landing areas over 5 miles in length are classified as unlimited and indicated as "unl").

N.B. Only the length of the longest runway is cited, and its direction is not indicated. Space restrictions occasioned this policy, but logic justified it. The logical assumption may be made that runways have been laid out in accordance with the local wind rose. Therefore, in all calms, or gentle-angling winds, or winds aligned with the longest runway, the longest runway will be used. When a wind not aligned with the longest runway is of such intensity that the longest runway cannot be used, this wind makes the use of runway aligned with the wind, even though much shorter than the longest runway, sufficiently long from a safety viewpoint. Too, prior knowledge that there is, for example, a NW/SE runway is of little value to a pilot if, when he arrives over the field the wind is blowing too strongly from another direction to use that runway. Finally, the larger the number indicating the longest runway length, the greater is the assurance of a sufficient number of runways for all-wind coverage.

RADIO

R1: Voice availability via tower, range (or homing device), or voice station
R2: Range (or homing device) and tower
R3: Range (or homing device), tower, and instrument landing system

LIGHTS

L: Incomplete lighting, either flood or portable runway lights
L1: Beacon only
L2: Beacon and boundary
L3: Beacon, boundary, and obstruction
L4: Beacon, boundary, obstruction, and flood
L5: Beacon, boundary, obstruction, flood, and runway contact
(L5): Identical to L5 except that runway contact lights are high intensity
L6: Beacon, boundary, obstruction, flood, runway contact, and instrument approach
(L6): Identical to L6 except that instrument approach lights are high intensity

(The class always indicates the highest element available but does not necessarily include all intermediate elements)

SERVICING

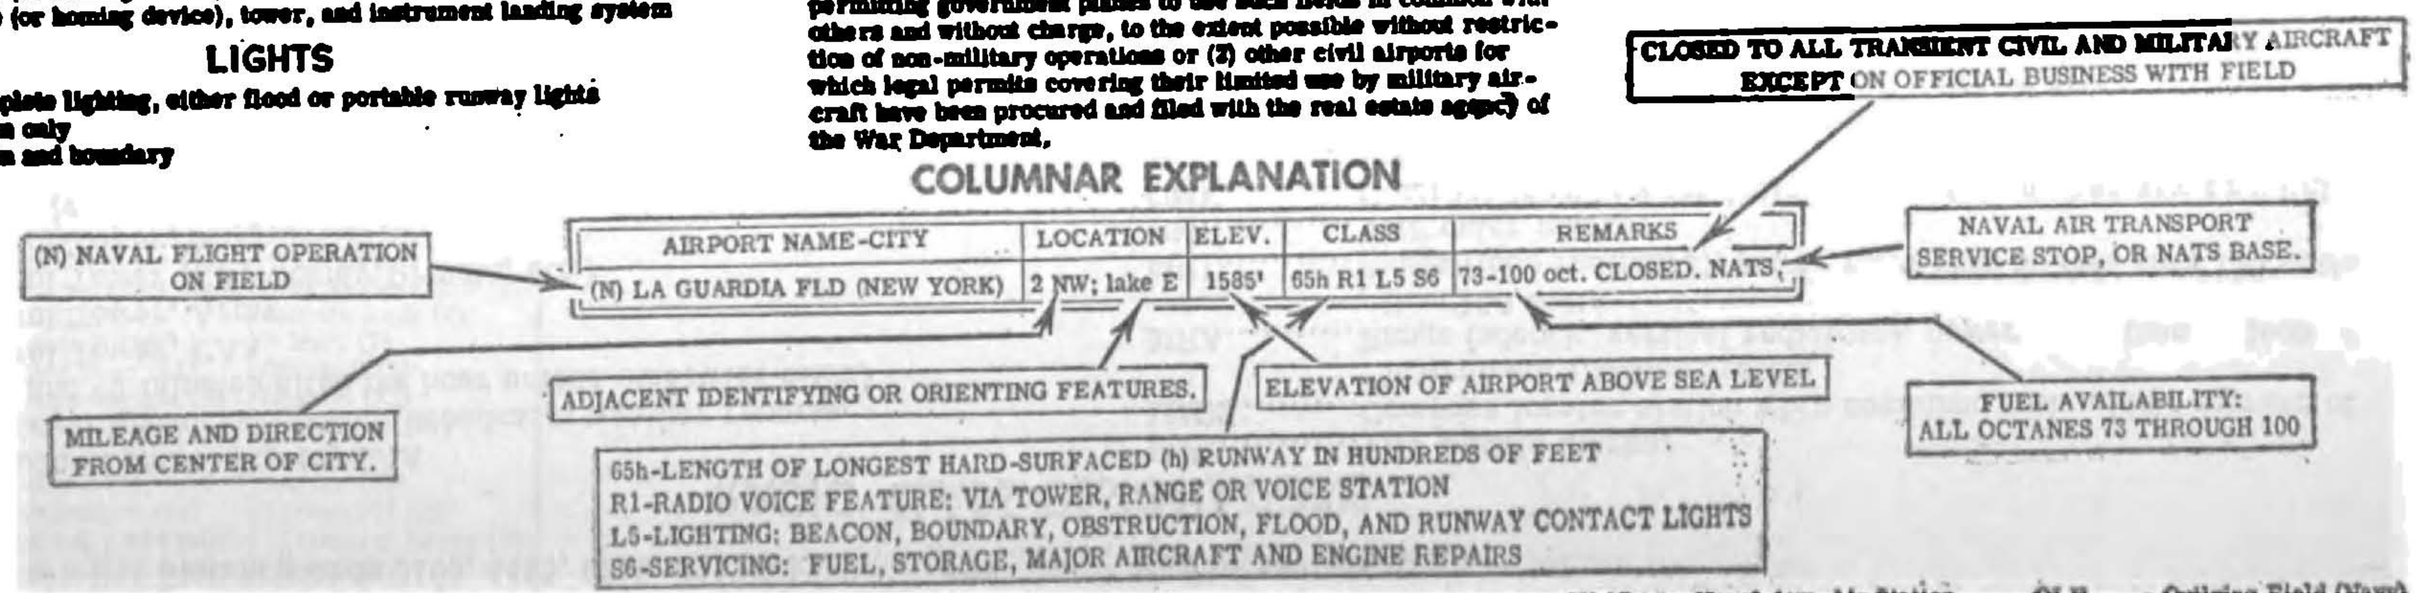
S1: Fuel
S2: Fuel, storage
S3: Fuel, storage, minor aircraft repairs
S4: Fuel, storage, minor aircraft, and minor engine repairs
S5: Fuel, storage, major aircraft, and minor engine repairs
S6: Fuel, storage, major aircraft, and major engine repairs

N.B. Very often small civilian fields (particularly in non-metropolitan areas) will have no full-time attendant. Frequently, servicing at such fields in isolated communities is available only by circling the town to attract the operator's attention.
These fields are often recognizable by airport class, comparable to, for example, "1S S1". "1S S1" suggests that the field is not too large, and that the field may not have a full-time attendant even though fuel is stored there. Lack of radio or lighting facilities, indicated by the absence of an "R" or "L" in the airport class, is a further indication that a full-time attendant may not be available. Absence of an "S" (servicing) indicates definitely that fuel, if available at all, is available only by truck from town. Any field carrying no indication of radio (R), lights (L), or servicing (S) in airport class column should be used with caution, especially a field of the small category. Fields of this nature may be inactive or not maintained, and thus dangerous for use.

NOTES

1. "(NC)" not charted. Indicates not charted because of insufficient data or inability to verify
2. → New or revised data. *
3. "(P)" in CITY-AIRPORT NAME column indicates: (1) those municipal airports improved with public funds and covered by an ag agreement between the municipality and the U.S. Government permitting government planes to use such fields in common with others and without charge, to the extent possible without restriction of non-military operations or (2) other civil airports for which legal permits covering their limited use by military aircraft have been procured and filed with the real estate agency of the War Department.
4. "Effingham Int., 10, LS-D" in CITY-AIRPORT NAME column indicates that the airport is Effingham CAA Intermediate Field, Site 10, on the St. Louis-Indianapolis Airway. Municipal airports where the lights are maintained by the CAA are listed similarly except that there is no prefixed star or "Int."
5. In Location column, the word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.
6. In Remarks column:
   (a) "91 oct.", indicates fuel octanes available. "Army", or "Navy" following octane indicates Army or Navy contract fuel available.
   (b) "CLOSED" indicates closed to all civil aircraft and all transient military aircraft except on official business this station or in emergency.
   (c) "Port. B-2 lights" indicates cone-mounted lights outlining runways. These lights are portable and may be shifted from runway to runway.
   (d) "TEMP INACTIVE. NO FACS." indicates AAF airfields used either exclusively by the AAF or municipal airfields used jointly by the AAF and civil interests at which both the Army and the civil interests are inactive. Such airfields will be available to military aircraft at the discretion of the Commanding Officer of the organization to which the aircraft is assigned (See Special Notice).
   (e) "ARMY TEMP INACTIVE. CIVIL FACS." indicates municipal airfields used jointly by the AAF and civil interests at which the Army facilities are inactive but civil facilities are available. Such fields may be used by military aircraft, however, only commercial service is available.
   (f) "PRIVATE" indicates field is available for owner only, and not to be used by others except in emergency.
   (g) OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, clearly discernible for contact operations, are frequently omitted, for example. On the other hand, all pole lines are cited.
   (h) "Fld lgts on prior req." indicates field lights are available only by previous phone call, telegram, or letter. It must be remembered that most fields do not have 24-hour operation. Accordingly, the field lights, indicated for such a lighted field (and, in some instances, even the rotating beacons) are available only by prior request. When an airport classification indicates a lighted field, and there is no notation in the REMARKS column, the field lights burn all night or will be turned on when a radio request is made or a plane circles the field.
   (i) "FEE" indicates landing fee for private aircraft
7. Airline stop airport names are capitalized.

COLUMNAR EXPLANATION



AIRPORT NAME ABBREVIATIONS

(A) - Army Field
AAB - Army Air Base
AAF - Army Air Field
COAS - Coast Guard Air Station
LTA - Lighter than Air
MCAS - Marine Corps Air Station
MCAAF - Marine Corps Aux. Air Facility
(N) - Navy Field
NAAS - Naval Aux. Air Station
NAF - Naval Air Facility
NAS - Naval Air Station
NPG - Naval Proving Grounds
OLF - Outlying Field (Navy)

* AT THE BOTTOM OF THE LAST COLUMN, UNDER THE HEADING OF NEW AIRPORTS BORDERED BY TINTED LINE WILL BE FOUND, OUT OF ALPHABETICAL ALIGNMENT, ALL THE NEW AIRPORTS TABULATED AFTER THE TYPE FOR THAT PAGE HAD BEEN ORIGINALLY SET UP.

✓ CAUTION- MANY SEAPLANE LANDING AREAS IN THE NORTH ARE CLOSED DURING WINTER MONTHS BECAUSE OF ICE.

OPERATION OF SEAPLANES ON THE NEW YORK STATE CANAL SYSTEM:

AN OFFICIAL COMPLAINT HAS BEEN RECEIVED FROM THE STATE OF NEW YORK, DEPARTMENT OF PUBLIC WORKS, THAT THE NEW YORK STATE CANAL CHANNEL IS BEING USED FOR THE TAKING OFF AND LANDING OF AIRCRAFT. THIS CHANNEL IS VERY NARROW AND HAS NUMEROUS CURVES. AIRCRAFT LANDINGS AND TAKE-OFFS ON THIS CHANNEL, THEREFORE, ARE DANGEROUS AND PRESENT A HAZARD TO CANAL TRAFFIC AND SMALL BOATS. ALL AIRMEN ARE CAUTIONED THAT SUCH ACTIVITIES MAY CONSTITUTE CARELESS OR RECKLESS OPERATION OF AIRCRAFT.

R-radio facilities. L-lighting facilities. S-servicing. (See page xii) → NEW OR REVISED DATA. N.B. Seaplane bases and anchorages are not charted or indexed.

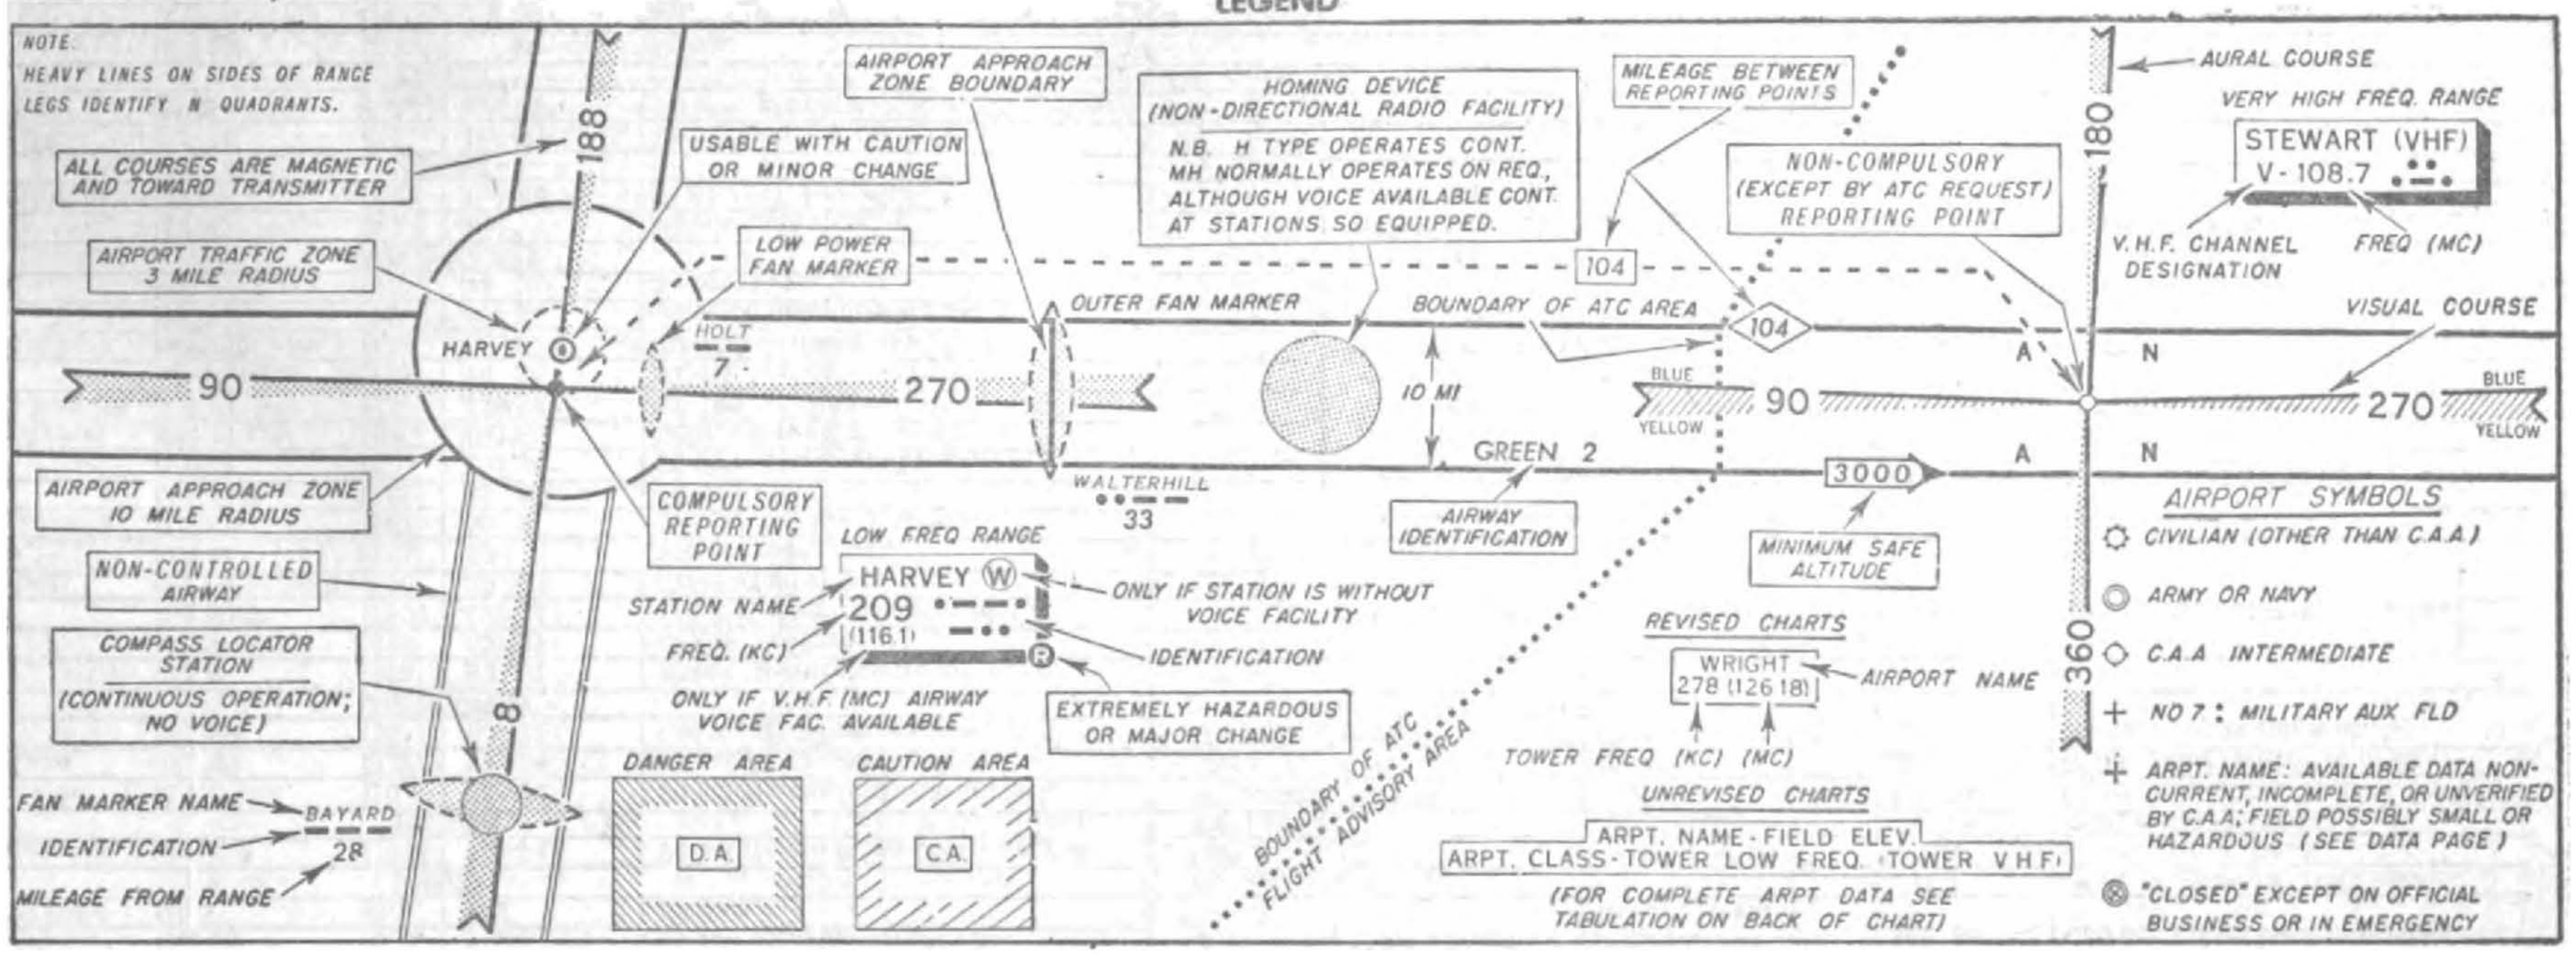

CHART CONTENTS

The Flight Planning Charts, in addition to the warning (R) and caution (O) symbols, indicate: (1) all aeronautical radio facilities except air carrier stations; (2) all minimum safe altitudes and fix mileages: (3) all Army and Navy fields and CAA intermediate fields, and all active civilian airports; (4) all danger and caution areas; (5) all designated airways. These charts indicate all facilities, and the current status thereof, on record with the CAA as of 0001 E.S.T. each alternate Tuesday.

CHART PURPOSE AND USE

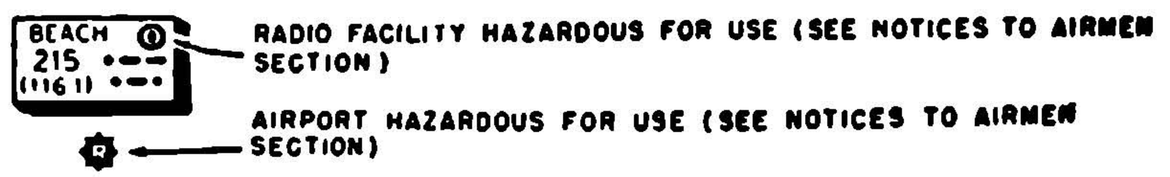
The primary purpose of these charts is to facilitate the planning and execution of cross-country flights. The user should check the charts for the symboled (R) or (O) items between his point of departure and his destination. If there is none, there is no necessity for him to read the Notices to Airmen section as far as temporary items are concerned. As for permanent changes - all major ones, such as new field, abandoned fields, range frequency changes, etc., are currently reflected on the charts For record-keeping purposes and for the correction of charts and publications, however, the Notices to Airmen section should be carefully read.

VHF CHANNEL LETTER DESIGNATORS

Channel letter designators are being shown on the Flight Planning Charts herein only as an aid to pilots in their use of unmodified military equipment. It is emphasized that not all very-high frequencies now in use have channel letter designators. Standardization of air-borne equipment in this respect has not been effected, nor is it expected to be along the lines of one-letter designators because of the large number of frequencies which eventually will be in use.

CHART HAZARD SYMBOLS

The current status of facilities and hazards as reported to the CAA is indicated by the symbol system. An airport closed because of construction, an inoperative range, a revised range quadrant identification or range frequency, or course realignment of 20° or more, for example, are indicated by the symbol (R) for red, or warning. An airport under construction but usable, or an inoperative control tower, on the other hand, is indicated by the symbol (O) for orange, or caution.



RANGE COURSE LENGTHS

In general, the length of radio range courses shown herein indicates the approximate location where it is expected that a pilot will tune from one radio range to the next one along his route of flight. Such change-over points, however, are not mandatory, and it is expected that a pilot will use his best judgment in selecting change-over points that will best serve his needs.

Warning

Radio range courses are subject to disturbances that result in multiple courses, and signal fades and surges over rough country. Pilots flying over unfamiliar routes are cautioned to be on the alert to detect these vagaries, particularly over mountainous terrain.

NOTICES TO AIRMEN

SPECIAL NOTICES

ARMY DATA: Advice covering Air Forces Fields or Air Forces Operations on civil fields, or AAF Radio Facilities, and Danger or Cuation Area activation, as well as requests for approval for the closing of any Army airfields to transient military aircraft for a period in excess of 10 days should be directed to: COMMANDING GENERAL, AIR TRANSPORT COMMAND, WASHINGTON 25, D. C. ATTENTION: HEADQUARTERS FLIGHT SERVICE, FLIGHT OPERATIONS. Information to be published will be coordinated and submitted to the C.A.A.

NAVY FACILITY DATA: In accordance with Hydrographic Office Memorandum for Aviators No. 9, July 29, 1946, Hydrographic Office information concerning naval and marine corps air stations and facilities, including changes in field facilities, operation rules, air/ground communications facilities, instrument approach procedures and navigational aids, should be directed to: THE DIVISION OF AIR NAVIGATION, HYDROGRAPHIC OFFICE, WASHINGTON 25, D.C., for transmittal to the C.A.A. In accordance with Aviation Circular Letter No. 96-46 of June 13, 1946 , approval for the closing of any naval or marine corps air station or facility to transient military aircraft for a period in excess of 10 days must be obtained from the Chief of Naval Operations. Also, approval is to be obtained from the Chief of Naval Operations before relocation or modification of any aid to air navigation, such as reorientation of radio ranges.

✓ USE OF AIRPORTS BY MILITARY AIRCRAFT: (1) AAF Regulation 85-2. The attention of Army clearance personnel and of Army pilots is invited to the provisions of Section III, AAF Regulation 85-2 and AAF Regulation 85-2A, which state in part: "Except for those Army aircraft assigned to civil contractors or agencies under bailment contract, no Army aircraft will utilize civil airports which have not been leased, purchased, or where AP-4 or similar landing rights agreements have not been negotiated by the Government, except in case of emergency or in case of official business. Each instance of flights in AAF aircraft for official business will be covered by competent air force, major air command, or higher authority orders. Each instance of flights for official business in organic aircraft of the Army Ground Forces will be covered by written orders of the commander of the unit to which the aircraft is assigned. These written orders must designate the field of intended landing. Unauthorized use of such airports is a substantiating factor in claims for damage with accompanying requests to the Government to bear maintenance and repair costs or to provide Government equipment at such civil airports. Notation will be made by clearing authorities in Remarks section of AAF Form 23 that competent authority authorized use of such fields and will be transmitted in Remarks section of the flight plan as 'authorized flight'. All landings by military aircraft without competent written orders on inactive, temporarily inactive Army airfields and civilian airports, except in case of emergency, will be limited to the ones identified by letters 'A, N, or P' in the Airman's Guide. It is the responsibility of the various air forces, major air commands and certain field activities under the direct control of the Commanding General, AAF, to prevent unauthorized use of airfields and airports as outlined in this Regulation".

(2) Official Business: Within the meaning of AAF Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service or other items attendant with itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

(3) Policy of Army Use of Temporarily Inactive Airfields. (a) Municipal airfields which have been used jointly by the Army Air Forces and civil interests and at which Army facilities are temporarily inactive but the civil facilities are still active, may continue to be used by military aircraft. No servicing other than that provided by commercial concerns will be available. Such airfields will be identified herein (directory section only) by the following notice: "ARMY TEMP INACTIVE - CIVIL FACS." (b) Temporarily inactive Army airfields used exclusively by the Army Air Forces (either owned or leased) or municipal airfields used jointly by the Army Air Forces with civil interests at which both Army and civil facilities are inactive will be available to military aircraft at the discretion of the Commanding Officer of the organization to which the aircraft is assigned. Such airfields will be identified herein (directory section only) by the following notice: "TEMP INACTIVE - NO FACS.". The aforesaid policy statement is not to be construed as countermanding any AAF Regulation or letters governing command use of municipal airports or Army airfields.

4. "CLOSED" Army Air Fields: Under the provisions of AAF Regulation 60-23 or under specific direction of the CG, AAF, from time to time certain airfields under the jurisdiction in whole or in part of the Army Air Forces will be listed as "CLOSED": Such as, (a) Fields closed to all transient traffic except on official business or in emergency; (b) Fields that have been declared surplus to the AAF and on which permits have not been issued for civil use or which have not been otherwise disposed of by WAA. The listing "CLOSED" will appear in the directory section only. Airfields so designated will be used on official business only under written orders in each case.

MILITARY AND NAVAL LANDINGS IN NEWFOUNDLAND: All military and naval aircraft landing in Newfoundland should use Harmon Field at Stephenville or Naval Operating Base at Argentia. Gander has very limited military facilities and is reserved for commercial and weather diverted military aircraft.

RESTRICTIONS ON AAF HELICOPTERS: YR-5A, R-5A, YR-5D, R-5D (except as indicated below*) and YR-5E helicopters may be released for flight only upon compliance with TO-01-230 HB-13 and -14.

*R-5D helicopters No. 43-46843 and subsequent have been modified by the contractor and may be released for flights.

ARMY FOREIGN CLEARING STATIONS: Under the authority of AAF Regulation 61-4, Army aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated: AFRICA - Morrison Field, Fla., Washington National Airport, D.C., or Westover Field, Mass. ALASKA - McChord Field, Wash.; Great Falls AAF, Mont. BERMUDA - Mitchel Field, N. Y.; Morrison Field, Fla.; Washington National Airport, D.C.; or Westover Field, Mass. CANADA - Great Falls AAF, Mont.; McChord Field, Wash.; Washington National Airport, D.C.; Selfridge Field, Mich.; or Westover Field, Mass. CANAL ZONE, CENTRAL AMERICA, MEXICO, AND SOUTH AMERICA - March Field, Calif.; Kelly Field, Tex.; or Morrison Field, Fla. CARRIBBEAN - Morrison Field, Fla., or Kelly Field, Tex.; ENGLAND, GREENLAND, ICELAND, NOVA SCOTIA, NEWFOUNDLAND, AND NORTH IRELAND - Washington National Airport, D.C., and Westover Field, Mass. (Note: Selfridge Field also will clear for Nova Scotia and Newfoundland). HAWAII - Fairfield-Suisun AAF, Calif.

✓ OPERATING PROCEDURE WITH FLIGHT SERVICE UNDER AAF MILITARY FLIGHT SERVICE COMMUNICATIONS SYSTEM (PLAN 62): (1) Departure from AAF Bases. No change Reference: AAF Regulations 15-23 and 60-22. (2) Departure from non-AAF Bases. AAF aircraft departing from non-AAF bases will file a complete flight plan with, and secure approval from the nearest Flight Service Center prior to takeoff, or as outlined in AAF Regulation 60-22. Communications with a Flight Service Center may be established by direct telephone to the center; or by a radio call to the nearest AAF Base or AACS Airways radio station. After obtaining the Flight Service approval, pilots contemplating flight under Instrument Flight Rule conditions will secure a CAA Airway Traffic Control clearance. The CAA clearance normally can be obtained more rapidly by contacting CAA directly through CAA Communications facilities. If CAA Communications facilities are not available, however, the CAA clearance may be obtained through Flight Service. (3) Change of Contact Flight Rule (CFR) Flight Plan Enroute. AAF aircraft requiring a change of route or point of first intended landing of a CFR flight plan enroute will contact Flight Service through an AACS Airway radio station or control tower, submit the information required by AAF Regulation 60-22 and, when necessary, secure Flight Service approval. (4) Change of Instrument Flight Rule (IFR) Flight Plan,

✓ Indicates new or revised Special Notice

or CFR to IFR, or IFR to CFR enroute. AAF aircraft requiring a change of route, altitude, point to first intended landing, cruising speed or alternate airport, or change from CFR to IFR or IFR to CFR enroute, will contact a CAA communications station for coordination and approval by CAA Airway Traffic Control and Flight Service. If communications with CAA communications station cannot be established, AACS Airways radio station will be contacted for coordination and approval by CAA Airway Traffic Control and Flight Service. (5) CFR Position Reports. When flying under CFR conditions, pilots will make position reports, wherever practicable, to AACS Airway radio stations enroute and receive any necessary advisories from Flight Service. (6) IFR Position Reports. When flying under IFR conditions, pilots will first make position reports to CAA communication stations as heretofore required, and will then make position reports to AACS Airways radio stations in order that the responsible Flight Service Center may furnish any necessary advisories. (7) Voice Calls. AACS Airways radio stations will be called by the location name followed by the word "airways", such as "Bolling Airways" This is distinct from the CAA radio call system which uses the location name followed by the word "radio", such as "Washington Radio". (8) All VHF equipped aircraft will be provided with a card to be prominently mounted near the VHF control box which will specify button, frequency, and service obtainable. An index of AACS Airways Stations within the U.S., together with a listing of the assigned frequencies, may be found on pages 94 and 95 of T.O. 08-15-1. The following table displays the channels and frequencies normally used to contact the various communication installations:

Button	Frequency	Service
A	116.10 mc.	CAA AIRWAYS (RANGE STATIONS) *AACS Airways (Plan 62)
B	126.18 mc.	CONTROL TOWERS
C	137.88 mc.	AACS AIRWAYS (PLAN 62) *Control Towers
D	140.58 mc.	MILITARY EMERGENCY AND GCA FINAL APPROACH CONTROL

*Available for service indicated on a secondary basis.

(9) It will be some time before all AAF aircraft are equipped for operation on AACS Airways frequencies. It is not the intent that pilots flying aircraft not so equipped attempt to make position reports to Flight Service as described above. Emergency Flight Service advisories, however, may be transmitted to such aircraft on the AAF control tower frequency. Aircraft which are equipped for operation on AACS Airways frequencies will contact airways stations whenever possible rather than AAF control towers.
(10) The following list of telephone numbers will be used for contacting military Flight Service Centers:

CAA AREA	FLIGHT SERVICE AREA	PHONE NO.
Washington Pittsburgh New York Boston	Olmsted Flight Service Center Middletown, Penna.	Steelton 93387 " 93470
Jacksonville Miami	MacDill Flight Service Center Tampa, Fla.	Tampa H-4871
Memphis New Orleans Atlanta	Maxwell Flight Service Center Montgomery, Ala.	Montgomery 69
Cleveland Cincinnati Detroit Chicago St. Louis	Wright Flight Service Center Dayton, Ohio	Osborn 88691,88692
Fort Worth San Antonio	Fort Worth Flight Service Center Fort Worth, Texas	Ft. Worth 77251
Denver Minneapolis Kansas City	Lowry Flight Service Center Denver, Colo.	Denver LD 116 Denver LD 117
Los Angeles Albuquerque El Paso	March Flight Service Center Riverside, Calif.	Riverside 7107,7108
Oakland Salt Lake	Hamilton Flight Service Center San Rafael, Calif.	San Rafael 770
Great Falls Seattle	McChord Flight Service Center Tacoma, Washington	Tacoma LD 20 Tacoma LD 21

IFR CLEARANCE OF ARMY AIRCRAFT: Except as outlined below, no Army aircraft will be cleared for instrument flight unless such aircraft is equipped with a low frequency radio receiver capable of reception in the 200 to 400 kc. band. The BC-1206 (Detrola) receiver is not considered adequate as regards compliance with this directive. Aircraft not so equipped may be permitted to clear under IFR when the instrument type clearance is necessitated by reduced local visibility caused by fog, smoke, or haze, or when the flight will not be conducted under conditions which will require navigation by radio.

CLEARANCE OF AAF AIRCRAFT IN NEW YORK CITY AREA: In accordance with AAF Letter 63-9 of March 3, 1947, the following instructions will govern the clearance of AAF aircraft to and from the New York City Area, (encompassed by a 25-mile radius from the southern tip of Manhattan).

(a) FLIGHTS INTO THE AREA: AAF aircraft flying into the area may be cleared for or any authorized field therein, but will in all cases secure in-flight clearance from Mitchel Field (Army Flight Service) prior to proceeding to the field of destination. AAF Form 23 will indicate a flight plan to the field of destination via Mitchel Field. Mitchel Field (Army Flight Service) will approve further clearance to other fields in the area under the conditions listed below only. If further clearance is refused, aircraft will land at Mitchel Field or at any other authorized field outside the area.
(1) CFR. When the ceiling is at least 2000' and the visibility is 3 miles or more.
(2) IFR. (a) When the visibility is not less than 1 mile and the ceiling is unlimited.
(b) When the visibility is not less than 2 miles and the ceiling is not less than 5000'.

(b) FLIGHTS OUT OF THE AREA: AAF aircraft departing from the area from fields, other than Mitchel, will be cleared subject to the conditions listed above for CFR and IFR clearances. AAF aircraft engaged in regularly scheduled transport flights under the operational control of the Air Transport Command are exempted from the above restrictions.

VHF CHANNEL ASSIGNMENTS:

Following are Army assignments: CHANNEL	ARMY FREQUENCY	Following are Navy assignments: CHANNEL	NAVY FREQUENCY
A	116.1	A	116.1
B	126.18	B	126.18
C	137.88	C	140.58
D	140.58	D	142.74
G	137.70	1	124.38
H	134.10	2	128.70
U	108.3	3	142.02
V	108.7	4	142.56
W	109.1	5	144.36
		6	146.16

FOREIGN ENTRY PROCEDURES, AIRPORTS OF ENTRY, CUSTOMS REPORTS, U.S. CIVIL AIRCRAFT CLEARANCE FOR FOREIGN COUNTRIES, CANADIAN REGULATIONS FOR CFR AND IFR FLIGHTS, FLIGHT INTO PANAMA CANAL ZONE: These procedures and regulations were all incorporated into the Flight Information Manual, Vol. 1, No. 2, dated Jan. 1, 1947. Only amendments to the data contained in the Manual will hereafter be carried in the Airman's Guide.

FLIGHT INFORMATION MANUAL CORRECTIONS AND ADDITIONS: Correct Chapter VII of Flight Information Manual, by (a) carrying Presbyterian Church #3 Airport under St. Francisville, Ill., instead of Lawrenceville, Ill. (b) by changing the correct location of Kingman Flying Service, Arpt, Ind., as follows: Lat. 39-58, long. 87-16: (c) by carrying Lexington Co. Airport under Columbia, S. C., instead of Charleston, S. C.; (d) by carrying Alma under Arkansas instead of Alabama.

C.A.A. OVERSEAS/FOREIGN AERONAUTICAL COMMUNICATIONS STATIONS TRANSMITTING FREQUENCIES:

New York (WSY)	*2870	3248	3285	6563	6577	8538

T.H.	6515	6577	11,369			

*Underlined frequencies normally are utilized for radiotelephone transmissions; the others are utilized only for radiotelegraph transmissions. These Civil Aeronautics Administration stations normally provide receiving watches for simplex operation on the frequencies used (transmission and reception on the same frequency.) However, arrangements for cross-band operation may be made between the aircraft operator and the station concerned.

MEXICAN ENTRY FEES: At Mexican Airports of Entry, charges include an overtime fee of 30 pesos after 12 noon for Immigration Inspection and a fee based on a full day's wage for each inspector involved for each 3 hours of overtime or fraction thereof after 2 P.M. For Customs Inspection. Charges may also be made for a Customs guard to watch the plane and for the taxi fare to bring inspectors to the field after 12 noon. In American money total fees may approximate $15 to $20.

CAUTION ADVISED IN USE OF GUATEMALA-HONDURAS AREA AERONAUTICAL CHARTS: Flight checks have revealed that elevations indicated on Gulf of Fonseca (710) Aeronautical Chart covering the Guatemala-Honduras-Nicaragua Area, dated Dec. 1946, are as much as 4300 feet too low. This chart base is being thoroughly re-checked and a new chart will be issued as soon as possible.

SAN JUAN, P.R., PRE-FLIGHT CLEARANCES: The Isla Grande Airport at San Juan, Puerto Rico is a part of the U.S. Naval Air Station, San Juan. Commercial air carriers may not operate at this field without receiving specific authorization from the Chief of Naval Operations, Washington, D. C. The Commanding Officer, NAS, San Juan, may grant permission for one or two isolated landings. In any case, proper authority must be obtained prior to landing at San Juan. Privately owned aircraft in a ferry status must obtain permission from the commanding officer before landing at Isla Grande Airport.

GOAT ISLAND, JAMAICA COAST GUARD RADIOBEACON: The Coast Guard Radiobeacon at Goat Island, Jamaica, has been discontinued.

PALISADOES AIRPORT FACILITIES, KINGSTON, JAMAICA, B.W.I.: The Palisadoes Airport is a British Government controlled airport. The Government controlled tower transmits on 397 kcs. only, and guards 2870, 3105, and 6210 kcs.

It is necessary for all itinerant flights coming to Palisadoes to file Flight Plans from point of departure to the Communication Station at Kingston - call letters MRX. This Flight Plan should be marked for Information: Palisadoes Airway Traffic Control. The route frequency of 6515 kcs. A3 emission is guarded at MRX. They have a good signal on this frequency and can be read consistently throughout the day and ngt in the Carribbean Area. Flight plans may be filed for transmission to Palisadoes through the CAA - operated Overseas Foreign Aeronautical Communications Station, WBR, Miami.

NOTICE OF CONSTRUCTION OF NEW LANDING AREAS: Part 525 of the Regulations of the Administrator of Civil Aeronautics will be amended April 6, 1947, by the addition of a new paragraph. The basis and purpose of the new paragraph is:

The construction of a landing area within 5 miles of an existing landing area may constitute a hazard to the navigation of aircraft in air commerce, unless proper notice of such construction is given to all airmen and the traffic pattern for such landing area is coordinated with that of the existing landing area. To accomplish such notice and coordination, the Administrator of Civil Aeronautics must be notified of the construction of any landing area and any boundary of which will be located within 5 miles of an existing landing area. Below is the entire Part 525:

PART 525 - NOTICE OF CONSTRUCTION OR ALTERATION OF STRUCTURES ON OR NEAR CIVIL AIRWAYS: "525.1 Notice Required". Any person before engaging in the construction or alteration of any structure along or within 20 miles of a civil airway, in other than congested parts of cities, towns, or settlements, shall give notice thereof to the Administrator of Civil Aeronautics if the top or any part of such structure is, or may become, by reason of such construction or alteration greater than 150 feet above ground level, or above mean water level where the structure is, or will be, situated in or over navigable water. Like notice shall also be given to the Administrator of Civil Aeronautics if the top of any part of such structure is, or may become, by reason of such construction or alteration, greater than 5 feet above ground level, or above the mean water level where the structure is or will be situated in or over navigable water, for each 500 feet, or fraction thereof, of the distance that the structure is, or will be, situated from the nearest boundary of a landing area. "525.10 Construction of Landing Areas". Any person who engages in the construction of a landing area, as defined in section 525.3, any boundary of which will be within 5 miles of the nearest boundary of an existing landing area, shall give notice thereof to the Administrator of Civil Aeronautics. "525.2 Form of Notice". The notice of construction or alteration shall be submitted in triplicate on the form prescribed and furnished by the Administrator at least 30 days, but not more than 45 days, prior to the date on which such construction or alteration is to begin: Provided, that in case of an emergency requiring immediate construction or alteration such notice shall be given to the nearest representative of the Administrator in person, or by telephone or telegraph, and the executed form shall be submitted within 5 days thereafter. "525.3 Definitions:" As used in this regulation, - (a) 'Congested parts of cities, towns or settlements' means (1) sections of those cities, towns or settlements which have a population of less than 100,000, where a structure after construction or alteration will be shielded by existing structures of a permanent and substantial character, each of which is equal to or greater than the height of the completed structure, and (2) sections of those cities which have a population of more than 100,000, where it is evident beyond all reasonable doubt that a structure will not interfere with safety in air commerce whether or not the structure is, or will become by reason of the construction or alteration, greater in height that that of surrounding structures of a permanent and substantial character. (b) 'Landing Area' means any landing area, as defined in section 1 (22) of the Civil Aeronautics Act of 1938, as amended, and which is contained in the current list of landing areas issued by the Administrator on November 1 of each calendar year for the enforcement of this regulation.

(c) 'Boundary of a landing area' means (1) the limits of that part of a landing area maintained for the use of landing aircraft in taking off or landing, or (2) the limits of that part of a landing area suitable for water aircraft in taking off or landing, which limits are defined as being 5000' in all directions measured over open water from the principal ramp of the landing area or, if marked in accordance with standard practice, the limits so marked. (d) 'Structure', unless otherwise stated, means any form of construction of a permanent or temporary character, including any apparatus used in the construction, alteration, or repair of any such structure. (e) 'Alteration' means any change in a completed structure which (1) increases the height of the top or any part of the structure to, or above, the height specified in Section 525.1, or (2) increases or decreases the height of the top or any part of the structure which is above the height specified in Section 525.1. "525.4 Effective Date". This regulation shall become effective on November 1, 1941, and shall apply to the construction or alteration of any structure in progress on that date, except that in such cases the prescribed notice shall not be required until November 1, 1941 This regulation shall apply immediately to any new landing areas contained in the list of landing areas published and issued by the Administrator on November 1 of each calendar year, except that, in the case of construction of alteration of any structure which is already in progress on that date, the prescribed notice shall not be required until 15 days after that date".

CIVIL USAGE OF MILITARY FIELDS: Army and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

OLD PILOT CERTIFICATES MUST BE EXCHANGED: All pilot certificates issued prior to July 1, 1945, will expire on July 1, 1947. Such certificates may be exchanged for new-type certificates at any time prior to their expiration date. No red tape or written application is involved in the exchange. The pilot merely presents his old-type certificate to a CAA inspector, who immediately issues a new type certificate. A pilot can arrange to make the exchange at a CAA regional or district office, or during a CAA inspection trip to his local airport. The new-type certificates will be valid for at least 24 months from the date of issue, and the Civil Aeronautics Board is considering extending them for an even longer period.

NEW PRIV.FLIER VHF FREQUENCIES: All CAA Communications Stations and Towers are discontinuing receiving watches on 131.7 and 131.9 mcs as new equipment becomes available to guard the new private flier frequencies of 122.1 mcs for transmission to CAA Communications Stations and 122.5 mcs for transmission to CAA operated towers. Practically all CAA towers now guard 122.5 mcs but the communications stations program is not fully effective yet because of non-receipt of the new receivers.

CAA communications stns will reply to itinerant aircraft on 111.1 mcs or the voice channel of the VHF radio range. CAA arpt control towers will reply to itinerant acft on 1 of the freqs. 118.3,118.5,118.7,or 118.9 mcs.See individual data pages in AIRGI for inclusion of these freqs. as commissioned.

U.S. WEATHER BROADCASTS AND TRANSMISSIONS: The time of observation for all weather reports is 30 minutes after the hour, unless otherwise announced. Pilots enroute are requested to avoid, if possible, calling airway communications stations at or about 15 and 45 minutes past the hour to request weather information, as such calls may delay starting of scheduled broadcasts and cause inconvenience to other persons who are dependent on the broadcasts for weather reports.

RADIOTELEPHONE COMMUNICATIONS: The word ROGER in radiotelephone communications means "I have received all of your last transmission", and its use in any other sense by CAA stations and towers is not authorized. In order to avoid confusion it is suggested that pilots engaging in air-ground contacts also limit the use of ROGER to acknowledgment of transmissions.

INSTRUMENT FLIGHT, NEW YORK METROPOLITAN AREA: Revised arrival, departure, holding, instrument approach and control procedures utilizing new radio aids were placed in effect in New York Metropolitan Area effective Feb. 18, 1947. Non-air carrier pilots proposing instrument flight through this area or to or from Newark, Mitchel, or La Guardia Fields should write the Chief Controller, New York Air Traffic Control Center, Box 575, La Guardia Field, N. Y., for copies of applicable Operations Letters describing these procedures.

REDESIGNATION OF CIVIL AIRWAYS: Effective March 15, 1947, Part 600 of the Regulations of the Administrator was amended to read in whole or in part as follows: (1) Green airway #2 (Seattle to Boston) . . . Dickinson range station; Bismarck range station; Jamestown, range station; the intersection of the E leg of Jamestown and the W leg of Fargo; Fargo range station . . . (2) Green airway #4 (Los Angeles to Philadelphia) . . . Indianapolis range station; the intersection of the E leg of Indianapolis and the W leg of Columbus; Columbus range station . . . (3) Amber airway #6 (Jacksonville to U.S.-Canadian Border). . . From Columbus range station to the intersection of the NE leg of Columbus range and the W leg of Cleveland. From the intersection of the E leg of Cleveland and the SW leg of Clear Creek to the intersection of the SW leg of Clear Creek and the U.S.-Canadian Border. (4) Red airway #14 (Lone Rock to Louisville) . . . Rockford range stn to Joliet, rng stn. From Chicago rng stn via the intersection of the SE leg of Chicago and the W leg of Goshen; Indianapolis range station. . . (5) Red Airway #21 (Lansing to Newark). From Lansing, range station to the intersection of the SE leg of Lansing and the W leg of Romulus. From Romulys range station to the intersection of the SE leg of Romulus and the W leg of Cleveland. From the intersection of the W leg of Cleveland and the NW leg of Akron via Akron range station. . . (6) Red airway #27 (Knoxville to Detroit). . . . Toledo range station to the intersection of the N leg of Toledo and the W leg of Romulus. (7) Red airway No. 28 (Rockford to Grand Rapids). From Rockford range stn to the intersection of the SE leg of Rockford and the S leg of Milwaukee. From Chicago range station. . . (8) Red airway #55 (Burlington to Joliet) From Burlington, Iowa range station via Peoria, range station to the intersection of the E leg of Peoria and the SW leg of Joliet. (9) Red airway No. 59 (Toledo to U.S. - Canadian Border). From the intersection of the N leg of Toledo and the SW leg of Windsor to the intersection of the SW leg of Windsor and the U.S.-Canadian Border.

AIRWAY TRAFFIC CONTROL AREAS: Effective March 15, 1947, Part 601 of the Regulations of the Administrator was amended to read in whole or in part as follows: (1) Red airway #21 ATC Area (Lansing to Newark). All of Red airway #21. (2) Red airway #27 ATC Area (Knoxville to Detroit). All of Red airway #27 from Knoxville range stn to a line extended at right angles across such airway thru a point 25 miles NE of Knoxville rng stn and from a line extended at right angles across such airway through a point 25 miles S of Cincinnati range station to the intersection of the N leg of Toledo and the W leg of Romulus. (3) Red airway #28 ATC Area (Rockford to Grand Rapids). All of Red airway #28. (4) Red airway #59 ATC Area (Toledo to U.S.-Canadian Border). All of Red Airway No. 59. (5) Red airway #55 ATC Area (Burlington to Joliet). All of Red airway #55.

REDESIGNATION OF RADIO FIXES: Effective March 15, 1947, Part 601 of the Regulations of the Administrator was amended to read in whole or in part as follows: (1) Red airway #21 (Lansing to Newark). The intersection of the NE leg of Pittsburgh and the N leg of Altoona. (2) Red airway #55 (Burlington to Joliet). Peoria range station.

AERONAUTICAL CHART AND PUBLICATION CORRECTIONS: (a) Correct TO-08-15-1", page 94, by showing Castle Field air/ground station operating; page 95, by showing AACS station at Turner Field, Ga. as inoperative; page 26, by showing frequency of Cincinnati radio range as 335 kcs.; page 30, by adding Marshall, Mo. range transmitting and receiving on Channel A; page 40 by adding Columbia range transmitting and

receiving on Channel A; pages 46 and 47, by deleting Luke Field radio range and control tower; page 60, by adding Alamo tower transmitting and receiving on Channel B; pages 60 and 61 by showing Lake Charles AAF tower frequency as 278 kcs.

(b) Correct Flight Route Chart FC 228, dated Jan. 14, 1947, by showing the SW leg of Fort Wayne, Ind, as 51° instead of 151°; Flight Route Chart FC 229, dated Jan. 17, 1947, by showing the bearing of the NE leg of Terre Haute, Ind. Radio Range as 249°, instead of 349°

(c) Correct TO-08-15-3, page 23, by correcting Brownsville radio range to show NW and SE quadrants as N and NE and SW quadrants as A.

(d) Correct Coast and Geodetic Survey Chart RF 28, dated Feb. 20, 1947, by relocating commercial broadcast station KCRC to lat. 36-25-06, and long. 97-52-24, 70 miles N of its charted location.

(e) Correct Phoenix Sectional base by transposing city names of Sonora and Roy as Sonora lies SW of Roy at lat 33-10, long. 111°.

WEATHER REPORTING SERVICE

Weather Reporting Station	Type of Station		Lat., Long.	Elev.	Effective Date

Little River, Calif. (Mendocino)	Supple.	Opened	39-15, 123-45	572'	2-14-47

Note: Terminal forecasts discont. for Lebanon, N.H., Montpelier, Vt., Dansville, N.Y., Glens Falls, N. Y., Danville, Va., Spearfish, S.D., Houlton, Me.

N.B. AIRPORT TRAFFIC CONTROL PROCEDURES: (a) Planes with 2-way radio should establish communication with control tower when 15 miles from the airport of destination and before taxiing or taking off. (b) Planes without receivers, when approaching tower-controlled fields and before taxiing and taking off, should be on the alert for and be guided by light gun signals. (See AAF Regulation 100-4, dated March 4, 1944, and CAR Digest or Manual 60). (c) Flashing tetrahedron lights, as well as the daylight operation of rotating beacons indicate suspension of CFR traffic.

AIR NAVIGATION AID DATA

All radio facilities except towers are CAA facilities unless otherwise cited. All towers are listed by operating agency. All range bearings are magnetic inbearings. All fan markers and station location markers operate on 75 mcs. All radio facilities operate continuously unless otherwise specified.

LEGEND

** - New or revised airport, danger areas, or miscellaneous data to be inscribed on charts or added to records.

★ - New or revised radio data to be inscribed on charts or added to records.

ALABAMA

Rnwy 14-32 lgtd 30 min. prior to arvls and take-offs and on req from sunset to sunrise. Tetrahedron lgtd sunset to sunrise. Three lgtd 30' poles 150' E of Rnwy 14-32 near GCA unit. (1-29)
SEATTLE-RACOMA ARPT (SEATTLE)-RADIO: Sonn. bndry and outer mrkr of CAA ILS will be discont. and outer mrkr will be relctd 4 1/2 mi S of S end of N/S rnwy. Middle mrkr will be installed 3444' S of S end N/S rnwy, keying alternate dots and dashes. Glide path will be installed on 335 mcs, to be lctd 1150' N of S endof N/S rnwy and 400' W of centerline. Lclzr continues to operate on 110.3 mcs. Prior to and during const period signals may at times be spurious and are not to be relied upon for any purpose. (2-14) FLD: Equip on fld days. Const approx 20' N of N end NW/SE rnwy. Glide path bldg and antenna mast being erected 400' W of N/S rnwy and 1150' from the S end thereof. Taxiway #1 from intersection to S end closed. (2-19)
SPRAGUE ARPT-Use N side and 1050' W end of strip, bal rocky and soft. Cattle on fld. (9-14)
SULLIVAN LAKE ARPT (METALINE FALLS)-2' grass and weeds. (7-1)
SUNNYSIDE ARPT-Non-standard traffic patterns. (2-19)
TOLEDO-WINLOCK INT, SITE 63B.SF-SA-Use strips only-sodded portions soft.
WALLA WALLA AAF-No opers office. Equip. on fld days Mon thru Fri. (2-10)
WESTPORT ARPT-Driftwood on fld after extremely high tides. (1-2)
WHIDBEY ISLAND NAS-AULT FLD-Bcn operates during IFR and from sunset to sunrise. Warm-up aprons avail. for all rnwys. (3-18)
WILBUR ARPT-Center 200' strip avail. Equip on fld. All taxiing on fld is on the left side to strip. (12-13)
YAKIMA CO. ARPT-Use rnwys, taxiways only, graded areas rough with ridges of dirt 6'' to 2' high. Equip on fld 0800 to 1600 daily. (2-27)

[illegible]

TRINIDAD-Carlsen Field-Edinburgh (North)-Rnwy closed to all Navy traffic except in emerg. Use Xeres (South) rnwy.

WEST VIRGINIA

BOLLINGER FLD (CHARLESTON)-Obst lgts on 240' twr Rdo Stn WKNA 5 mi N (360°) true inop. (2-13)
ELKINS ARPT-Ctc Elkins Rdo or circle fld before landing. (3-14)
LOUIS BENNETT ARPT (WESTON)-Soft spots after continuous heavy rains. (1-6)
SCOTT FLD (BECKLEY)-Use right traffic on N course. (12-31)

WISCONSIN

ANTIGO ARPT-Use with ctn during thawing weather. (3-11)
**BEAVER DAM ARPT-New fld. Lat 43-27, long. 88-52. (2-27) See page 33.
**BEAVER DAM ARPT, INC-2 mi N. ABANDONED. (2-27) See page 33.
BOYCEVILLE ARPT-Fld soft in wet weather. (2-17)
CHAPLIN'S ARPK (PLYMOUTH)-Only E/W strip avail. (3-12)
CLINTONVILLE ARPT-Use plowed strips only. (1-8)
CURTISS-WRIGHT ARPT (MILWAUKEE)-Closed ngts. (9-26)
EAU CLAIRE MUN. ARPT-Use rnwys only. Shoulders rough and soft pending completion of grading opers in Spring 1947. (11-18)
GENERAL MITCHELL FLD (MILWAUKEE)-Equip. on fld days. Right turn procedure rstd to lcly based acft. All acft land according to tetrahedron unless otherwise instructed by twr. All pilots must register in Admin Bldg upon arvl and dptr. Position lgts must be turned on and operating between sunset and sunrise for all flgts to and from fld. Ditch extending 150' S of intersection NE/SW, NW/SE rnwys paralleling SE portion NW/SE rnwy for 1/2 mi. E taxiway closed. Obst lgt atop 95' chimney SW corner fld inop. (12-30)
GINNOW ARPT (OMRO)-Use strips only. (1-6)
LA CROSSE ARPT-Use rnwys only. (9-24)
LA CROSSE INT, SITE 23A, CG-TWIN CITIES-CLOSED (soft). (3-12)
**MARSHFIELD ARPT-Rdo twr, 1504' total overall height above MSL erected 4.5 (20°) true NNE at lat 44-42-05, long. 90-09-37, red lgts at 1/3, 2/3 levels and flash. red code bcn on top. (3-5)
MOREY ARPT (MADISON)-Use strips only. (1-8)
PLATTE ARPT (PLATTEVILLE)-CLOSED (const). (6-12)
RICHLAND CENTER ARPT-Wheel-equipped acft use ctn. (1-2)
SHAWANO ARPT-Use rnwys only. (1-2)
SKY HAVEN ARPT (MILWAUKEE)-Use ctn on S 1/3 portion N/S strip. Stay on strip. (1-3)
SOLON SPRINGS ARPT-Const - unusable. (10-29)
**STEVENS POINT-455' twr of Rdo Stn WLBL, at lat 44-36, long. 90-02, collapsed Feb 13. (2-26)
STEVENS POINT ARPT-Use rnwys only. (1-20)
TOMAH ARPT-N/S strip under const. (2-24)
**TRUAX FLD (MADISON)-300' twr of Rdo Stn WHA/FM, erected 5 mi SW (218°) true. (3-3) Use rnwys only. Grass area 75' wide adj to rnwys rough, bal of grass areas unsafe and rough. Flood lgts and svcg not avail. 2230 to 0730. (2-3)
VETERANS FLD (MENOMONIE)-ROUGH. (1-2)
WAUKESHA CO. ARPT-Acft turn left after landing and taxi on right side of strip. Soft until approx Apr 15, trans acft land at own risk. (3-11)
WINNEBAGO CO. ARPT (OSHKOSH)-Use N/S, E/W rnwys only. (1-8)

WYOMING

BUFFALO INT, SITE 27, CX-GT-CLOSED (snow). (2-26)
★CASPER-RADIO: Mar 6, additional VHF voice fac avail. at commun stn. Transmits on 111.1 mcs.
**CASPER AAF-Rnwy lgts avail. (3-11) See page 25. No opers office. Rnwy lgts Rnwy 34 inop. (3-11)
★CHEYENNE-RADIO: Additional VHF voice fac avail. at commun stn. Transmits on 111.1 mcs. (3-6)

WYOMING

CHEYENNE ARPT-Equip. on fld days. Lgtd bldg between E/W rnwy and taxi strip, 1000' from E end. (1-1)
EVANSTON ARPT, new-Soft and hazardous during thawing weather. (3-14)
FORT BRIDGER INT, SITE 9, SL-OH-Equip. on fld intermittently. Strips soft and hazardous in thawing weather. (3-11)
JACKSON MUN. ARPT-Cattle on fld intmtly. (5-20)
KEMMERER INT, SITE B17, BX-RT-S 3000' of long strip avail. lgt acft, bal fld rough. (3-5)
★LARAMIE-RADIO: Additional VHF voice fac avail. at commun stn. Transmits on 111.1 mcs. (3-10)
SHERIDAN CO. ARPT-N/S rnwy unsafe heavy acft. Taxi strips parallel all rnwys except N/S rnwy and terminate at ramp. Equip. on fld intermittently. Ctc Sheridan Rdo for fld lgts. (2-6)
SUSSEX INT, SITE 22A, CX-GT-CLOSED (snow). (2-4)
WARDWELL FLD (CASPER)-Use rnwys, taxi strips only, bal fld rough. 30 million candle pwr ceilometer projector 1000' N of bcn. (3-13)

GCA AVAILABLE: How and Where

GROUND CONTROLLED APPROACH (GCA) AVAILABLE TO CIVIL PILOTS AS WELL AS ARMY AND NAVY: All GCA facilities (Army, Navy, or C.A.A.) are available to any plane in emergency. The Army and Navy installations are listed in the next two items. The C.A.A. -G.C.A. units at Washington National Airport, La Guardia Field and Chicago Airport will be available in the immediate future.

To secure GCA assistance pilots should call the associated control tower for instructions. In addition to the working frequencies listed below, Army and Navy GCA emergency V.H.F. transmissions are made on 140.58 mcs. Simplex service on 3117.5 kcs will be provided at all Army and Navy installations to provide an alternate means of communications for scheduled air carrier aircraft. Army and Navy towers will relay [although such indirect transmission is admittedly not desirable] GCA instructions on the 200-400 kc band to civil aircraft not equipped to receive VHF or HF.

A minimum of 30 minutes will generally be required to assemble a GCA crew and prepare the equipment for operation AFTER an alert has been received at those locations not providing continuous service.

Civil pilots desirous of making practice GCA approaches should make their own arrangements with the Commanding Officer of the base whose facilities they intend to use.

NAVY GROUND CONTROLLED APPROACH (GCA): Universal frequencies allocated primarily for Navy GCA operational use are as follows: HF Communications: 3475, 4890, 6640 kcs. VHF Communications - 134.64, 142.02, 143.64 mcs. As a safety precaution Navy GCA Units will also be prepared at all times to control both AAF and Navy aircraft on 140.58 mcs., emergency frequency. In addition to the standard frequencies listed in above paragraph the Navy GCA is prepared to transmit on HF from 2000 to 18100 kcs, and receive on 1500 to 9050 kcs. to aid any plane in emergency. It is the responsibility of the pilot desiring GCA assistance to establish communication with the appropriate control tower for preliminary approach instruction. The pilot will then be instructed as to the proper frequency for contacting the GCA Unit. If the pilot is unable to transmit or receive on the standard GCA frequencies, arrangements can be made through the control tower for the GCA Unit to shift to frequencies the plane can use, in the HF and VHF bands listed above. Navy GCA Operational Units are listed as follows: Charlestown NAAS, R.I.; Corpus Christi NAS, Tex.; Jacksonville NAS (Lee Fld.), Fla.; Moffett Field NAS, Calif.; Miramar MCAS, Calif.; New York NAS (Floyd Bennett), N.Y.; Norfolk NAS, Va.; Olathe NAS, Kans.; Oakland NAS, Calif.; Patuxent River NAS, Md.; Saufley Field NAAS, Fla.; Seattle NAS, Wash.; Whidbey Island NAS, Wash.;. Weather minimums range from 100' and 1/4 mi. to 200' and 3/4 mi. All the stations except Moffett Field, Calif., and Patuxent River, Md., which are in continuous operation, require 30 to 60 minutes warm-up.

ARMY GROUND CONTROLLED APPROACH (GCA): (A) CONTACT: Pilots requiring GCA assistance should call the associated control tower requesting instructions for working GCA. Example: "Andrews Tower, this is Army 5555, request GCA". (B) TOWER INSTRUCTIONS: Control towers will ascertain frequencies available to both pilot and GCA, advise the pilot and establish contact with the GCA Unit. Example: "Army 5555 this is Andrews Tower, do you have channel G, over". "Andrews Tower this is Army 5555, channel G available, over". "Army 5555 this is Andrews Tower, establish contact with GCA on channel G, out". "Andrews GCA, this is Army 5555, over". "Army 5555 this is Andrews GCA, your position is now etc . . .". (C) EMERGENCY: When receiver and transmitter difficulties exist, the tower may relay Ground Controlled Approach instructions to the pilot. However, from a safety standpoint the procedure should be used as an emergency contingent only. (D) ALERTING GCA: After being inoperative, GCA units require approximately 20 to 30 minutes for warming up. Pilots should anticipate requirement for GCA in flight planning and request alerting of GCA units as far in advance as possible.

INDEX TO FLIGHT PLANNING CHARTS

NOTICE TO AIRMAN'S GUIDE SUBSCRIBERS: (a) Our recent request for advice as to how the data pages should list radio and airport data is resulting in returns favoring consolidated data (similar to page 124) about six to one. (b) The Government Printing Office has advised us that it is impossible to three-hole punch the Guide on the present presses because these presses not only print the publication, but also wrap it in addressed wrappers. (c) On the data pages, facilities must be alphabetized according to their charted names to permit ready reference when in flight. The new Index of Facilities, however, which lists all the facilities in each community, will facilitate pre-flight planning and the selection of a particular airport at the city of destination.
